The author of The Long Descent examines a solution for the troubles of our modern age: technical regression. To most people paying attention to the collision between industrial society and the hard limits of a finite planet, it's clear that things are going very, very wrong. We no longer have unlimited time and resources to deal with the crises that define our future, and the options are limited to the tools we have on hand right now. This book is about one very powerful option: deliberate technological regression. Technological regression isn't about "going back"—it's about using the past as a resource to meet the needs of the present. It starts from the recognition that older technologies generally use fewer resources and cost less than modern equivalents, and it embraces the heresy of technological choice—our ability to choose or refuse the technologies pushed by corporate interests. People are already ditching smartphones and going back to "dumb phones" and land lines and e-book sales are declining while printed books rebound. Clear signs among many that blind faith in progress is faltering and opening up the possibility that the best way forward may well involve going back. A must-read for anyone willing to think the unthinkable and embrace the possibilities of a retro future. Praise for The Retro Future "Whether or not you accept John Michael Greer's argument that a deindustrialized future is inevitable, you'll appreciate his call for the freedom to select the best technologies of the past—worthy and sustainable tools, not pernicious prosthetics. Greer's vision of a "post-progress" world is clear, smart, and ultimately hopeful." —Richard Polt, professor of philosophy, Xavier University; author, The Typewriter Revolution: A Typist's Companion for the 21st Century "What might your life be like without an automobile, TV, or a mobile phone? Ask John Michael Greer, who lives that way and recommends it as practice for the soon-to-be-normal. Greer says we are embarked upon the post-progress era. Climate change, loose nukes, and resource exhaustion are among its many challenges. In The Retro Future, Greer looks backward to mark the way forward." —Albert Bates, author, The Post-Petroleum Survival Guide, The Biochar Solution, and The Paris Agreement

Volume II of The Official History of the UK Strategic Nuclear Deterrent provides an authoritative and in-depth examination of the British government's strategic nuclear policy from 1964 to 1970. Written with full access to the UK documentary record, Volume II examines the controversies that developed over nuclear policy following the arrival in office of a Labour government led by Harold Wilson in October 1964 that openly questioned the independence of the deterrent. Having decided to preserve the Polaris programme, Labour ministers were

nevertheless committed not to develop another generation of nuclear weapons beyond those in the pipeline, placing major doubts over the long-term future of the nuclear programme and collaboration with the United States. Defence planners also became increasingly concerned that the deployment of Soviet anti-ballistic missile (ABM) defences around Moscow threatened to undermine the ability of Polaris to fulfil its role as a national strategic nuclear deterrent. During 1967, under heavy pressures to control defence spending, a protracted debate was conducted within Whitehall over the future of Polaris and how to respond to the evolving ABM challenge. The volume concludes with Labour's defeat at the general election of June 1970, by which time the Royal Navy had assumed the nuclear deterrent role from the RAF, and plans had already been formulated for a UK project to improve Polaris which could both ensure its continuing credibility and rejuvenate the Anglo-American nuclear relationship. This book will be of much interest to students of British politics, Cold War history, nuclear proliferation and international relations.

The main focus of this book is to introduce the internals of ExFAT File system to the reader and also to compare with the internals of the TexFAT File system in depth. But, as a prerequisite to cover the essential file system details, this Book starts with introduction of the internals of FAT series file systems such as FAT 12, FAT16 and FAT32. These FAT series file systems are compared with each other in terms of features and limitations and then this book covers the internal details of the ExFAT File system and its differentiating features with respect to the FAT32 File system. The Transactional features of TFAT and TexFAT File systems are also discussed in detail. This book also discusses how to optimize the FAT and ExFAT File systems for SSDs (Solid State Drives). The data structures used to represent files/directories and the algorithms used to manage file system operations of FAT series file systems, ExFAT, TFAT and TexFAT File systems are explained in detail. The snapshots of on-disk structures of files, directories and data of the files/directories are also given along with explanations so that readers will get the feel of exact internals of how the files/directories are represented and how the on-disk updates are performed by the file system operations. Even though the FAT file system is available since the HDDs (Hard Disk Drives) era and the specification of FAT File system is available, But, in this book, the reader may find the FAT file system explanation with respect to SSDs. The example scenarios of the FAT File system data corruptions are also demonstrated. The on-disk layout snapshots of FAT and other file systems help the reader to understand the file systems internals easily. This book is written with the assumption that the reader need not have any file system knowledge as a prerequisite. Intended audience for

this book are computer and information science beginners / students, computer and Information technology (IT) professionals working on file systems of HDD / SSDs / Flash memories and the professionals who are interested in doing forensic analysis on-disk file system patterns on storage devices.

The Unlike Us Reader offers a critical examination of social media, bringing together theoretical essays, personal discussions, and artistic manifestos. How can we understand the social media we use every day, or consciously choose not to use? We know very well that monopolies control social media, but what are the alternatives? While Facebook continues to increase its user population and combines loose privacy restrictions with control over data, many researchers, programmers, and activists turn towards designing a decentralized future. Through understanding the big networks from within, be it by philosophy or art, new perspectives emerge. Unlike Us is a research network of artists, designers, scholars, activists, and programmers, with the aim to combine a critique of the dominant social media platforms with work on 'alternatives in social media', through workshops, conferences, online dialogues, and publications. Everyone is invited to be a part of the public discussion on how we want to shape the network architectures and the future of social networks we are using so intensely.

Developing appropriate responses to an ageing population is recognized by policy makers throughout the developed world as a top priority, as is the vital contribution made by family caregivers. However, cultural, demographic and organizational differences between countries have encouraged diverse patterns of response to this common challenge. This book provides a systematic cross-cultural analysis of contemporary patterns and future trends in all major countries of the European Union. Additional interest is provided by including Poland emerging from the post-Communist block as the country at the forefront for joining the European Union. The book should be useful to European policy makers and academics involved in studying the health and social care needs of older people and the capacity, contribution and needs of family caregivers who provide care to older people. The book is also relevant for policy makers and researchers in other countries, mostly in North America and Australia who wish to study European

approaches to supporting older people and family caregivers.
