The Third International Workshop on Security (IWSEC 2008) was held at Kagawa International Conference Hall, Kagawa, Japan, November 25 – 27, 2008. The workshop was co-sponsored jointly by CSEC, a special interest group on computer security of IPSJ (Information Processing Society of Japan) and ISEC, a technical group on information security of the IEICE (The Institute of Electronics, Information and Communication Engineers). The excellent Local Organizing Committee was led by the IWSEC 2008 General Co-chairs, Masato Terada and Kazuo Ohta. This year, there were 94 paper submissions from all over the world. We would like to thank all the authors who submitted papers to IWSEC 2008. Each paper was reviewed at least three reviewers. In addition to the members of the Program Committee, many external reviewers joined the review process of papers in their particular areas of expertise. We were fortunate to have this energetic team of experts, and are grateful to all of them for their hard work. The hard work includes very active discussion; the discussion phase was almost as long as the initial individual reviewing. The review and discussion were supported by a very nice Web-based system, iChair. We appreciate its developers. After all the review phases, 18 papers were accepted for publication in this volume of *Advances in Information and Computer Security*. In the workshop, the contributed papers were supplemented by one invited talk from eminent researcher Alfred Menezes (the Centre for Applied Cryptographic Research, The University of Waterloo). There are many people who contributed to the success of IWSEC 2008. We wish to express our deep appreciation for their contribution to information and computer security.

The primary purpose of this book is to capture the state-of-the-art in Cloud Computing technologies and applications. The book will also aim to identify potential research directions and

technologies that will facilitate creation a global market-place of cloud computing services supporting scientific, industrial, business, and consumer applications. We expect the book to serve as a reference for larger audience such as systems architects, practitioners, developers, new researchers and graduate level students. This area of research is relatively recent, and as such has no existing reference book that addresses it. This book will be a timely contribution to a field that is gaining considerable research interest, momentum, and is expected to be of increasing interest to commercial developers. The book is targeted for professional computer science developers and graduate students especially at Masters level. As Cloud Computing is recognized as one of the top five emerging technologies that will have a major impact on the quality of science and society over the next 20 years, its knowledge will help position our readers at the forefront of the field.

This IBM® Redbooks® publication examines the IBM Tivoli® Directory Server for z/OS®. IBM Tivoli Directory Server is a powerful Lightweight Directory Access Protocol (LDAP) infrastructure that provides a foundation for deploying comprehensive identity management applications and advanced software architectures. This publication provides an introduction to the IBM Tivoli Directory Server for z/OS that provides a brief summary of its features and a examination of the possible deployment topologies. It discusses planning a deployment of IBM Tivoli Directory Server for z/OS, which includes prerequisites, planning considerations, and data stores, and provides a brief overview of the configuration process. Additional chapters provide a detailed discussion of the IBM Tivoli Directory Server for z/OS architecture that examines the supported back ends, discusses in what scenarios they are best used, and provides usage examples for each back end. The discussion of schemas breaks down the schema and provides guidance on extending it. A broad discussion of authentication, authorization, and security examines the various access protections, bind mechanisms, and transport security available with IBM Tivoli Directory Server for z/OS. This chapter also provides an examination of the new Password Policy feature. Basic and advanced replication topologies are also covered. A discussion on plug-ins provides details on the various types of plug-ins, the plug-in architecture, and creating a plug-in, and

provides an example plug-in. Integration of IBM Tivoli Directory Server for z/OS into the IBM Workload Manager environment is also covered. This publication also provides detailed information about the configuration of IBM Tivoli Directory Server for z/OS. It discusses deploying IBM Tivoli Directory Server for z/OS on a single system, with examples of configuring the available back ends. Configuration examples are also provided for deploying the server in a Sysplex, and for both basic and advanced replication topologies. Finally it provides guidance on monitoring and debugging IBM Tivoli Directory Server for z/OS.

Server virtualization technologies are becoming more popular to help efficiently utilize resources by consolidating servers. IBM®, the first company that developed and made available the virtual technology in 1966, offers advanced, powerful, reliable, and cost-saving virtualization technologies in various hardware and software products including DB2® for Linux, UNIX, and Windows. This IBM Redbooks® publication describes using IBM DB2 9 with server virtualization. We start with a general overview of virtualization and describe specific server virtualization technologies to highlight how the server virtualization technologies have been implemented. With this introduction anyone new to virtualization will have a better understanding of server virtualization and the industry server virtualization technologies available in the market. Following the virtualization concept, we describe in detail the setup, configuration, and managing of DB2 with three leading server virtualization technologies: IBM Power Systems™ with PowerVM™ VMware Hyper-V We discuss the virtual machine setup with DB2 in mind to help IT support understand the effective ways of setting up a virtual environment specific for DB2. We explain the architecture and components of these three server virtualization technologies to allow DBAs to understand how a database environment using DB2 can benefit from using the server virtualization technologies. In addition, we discuss the DB2 features and functions that can take advantage of using server virtualization. These features are put into practice when describing how to set up DB2 with the three virtualization technologies discussed in this book. This book also includes a list of best practices from the various tests performed while using these virtualization technologies. These best practices can be used as a guideline or a reference when setting up DB2 using these virtualization technologies.

In a powerful debut novel that moves between the crowded streets of London and the desolate mountains of Iran, Yasmin Crowther paints a stirring portrait of a family shaken by events from decades ago and worlds away. On a rainy day in London the dark secrets and troubled past of Maryam Mazar surface violently, with tragic consequences for her daughter, Sara, and her newly orphaned nephew. Maryam leaves her English husband and family and returns to the remote Iranian village where her story began. In a quest to piece their life back together, Sara follows her mother and finally learns the terrible price Maryam once had to pay for her freedom, and of the love she left behind. Set against the breathtaking beauty of two very different places, this stunning family drama transcends culture and is, at its core, a rich and haunting narrative about mothers and daughters.

The best thinking and actions in the fast-moving arena of collaboration and knowledge management *The New Edge in Knowledge* captures the most practical and innovative practices to ensure organizations have the knowledge they need in the future and, more importantly, the ability to connect the dots and use knowledge to succeed today. Build or retrofit your organization for new ways of working and collaboration by using knowledge management Adapt to today's most popular ways to collaborate such as social networking Overcome organization silos, knowledge hoarding and "not invented here" resistance Take advantage of emerging technologies and mobile devices to build networks and share knowledge Identify what can be learned from Facebook, Twitter, Google and Amazon to make firms and people smarter, stronger and faster Straightforward and easy-to-follow, this is the resource you'll turn to again and again to get-and stay-in the know. Plus, the book is filled with real-world examples – the case studies and snapshots of how best practice companies are achieving success with knowledge management. Praise for *The New Edge in Knowledge: How Knowledge Management is Changing the Way We Do Business* "You may think you know knowledge management, but this is new—how knowledge initiatives can incorporate social media, mobile technologies, and learning, for example. This book integrates the new knowledge management with the best of the old, such as communities of practice and measurement. KM still matters, and this book tells you why." —Thomas H. Davenport, President's Distinguished Professor of IT and Management, Babson College "Over the last decade, knowledge management has emerged as a key success factor for the modern corporation, driven by tremendous advances in business analytics. This book studies the best practices in knowledge management and how leadership companies are applying them today." —Virginia M. Rometty, Senior Vice President and Group Executive Sales, Marketing and Strategy, IBM "APQC has been on the leading edge of knowledge management for almost two decades. O'Dell and Hubert have captured those best practices and created a road map to transform the way people work. Reap the benefits of their experience." —C. Jackson Grayson, Chairman and Founder, APQC and co-author of *If Only We Knew What We Know* "The *New Edge in Knowledge* is a useful how-to manual that takes best practice sharing and organizational capability building to the next level: Web 2.0, social networking, mobility, and communities of practice. National and international examples show how companies can create strategic alignment and systematic management to transfer knowledge rapidly and effectively." —Rosabeth Moss Kanter, Harvard Business School professor and author of *SuperCorp: How Vanguard Companies Create Innovation, Profits, Growth, and Social Good* "What has made our KM program strong is sticking to the fundamentals-- that's exactly what this book outlines. It provides trusted advisor guidance on how any company or organization can take the concrete steps to create and implement a world class KM strategy." —Dan Ranta, Director of Knowledge Sharing, ConocoPhillips "Carla O'Dell and Cindy Hubert have written an amazingly down to earth, useful and practical book on knowledge management and its importance to modern business. Starting with the distinction between information and knowledge, they provide a viewpoint that leaves IT in the dust. Read it to prepare for tomorrow's world!" —A. Gary Shilling, President, A. Gary Shilling & Co., Inc. "A practical business approach to knowledge management, this book covers KM's value proposition for any organization, provides proven strategies and approaches to make it work, shares how to measure KM's impact, and illustrates high level knowledge sharing with wonderful case studies. Well done!" —Jane Dysart, Conference Chair, KMWorld & Partner, Dysart & Jones Associates "This book is a tour de force in the field of knowledge management. Read every single page and learn about best practices from the leading firms around the world. All of this and more from the company that leads the way in the field: APQC. I highly recommend it for your bookshelf." —Dr. Nick Bontis, Director, Institute for Intellectual Capital Research "Food for thought from two of the pioneers. Carla O'Dell and Cindy Hubert have been in the trenches with many of the organizations that have succeeded in leveraging KM for business benefit. They recognized early the symbiotic relationship between knowledge flow and work flow and have guided practitioners in the quest to optimize and streamline both." —Reid Smith, Enterprise Content Management Director, Marathon Oil

Company "Carla O'Dell and Cindy Hubert take knowledge management from vague idea to strategic enabler. In so doing, they clear up the not only the whats, but the whys and the hows. This book establishes knowledge management as an organizational discipline. The authors offer a straightforward set of execution steps, coaching readers on how to launch their own knowledge management programs in a deliberate and rigorous way." —Jill Dyché, Partner and Co-Founder, Baseline Consulting; Author of *Customer Data Integration: Reaching a Single Version of the Truth* "The authors and APQC have put together an excellent 'how to' manual for Knowledge Management (KM) that can benefit any organization, from those experienced in KM to those just starting. The authors have taken their years of experience and excellence in this field and written a masterful introduction and design manual that incorporates industry best-practices and alerts readers to the pitfalls they are likely to encounter. This book needs to be in the hands of every KM professional and corporate senior leader." —Ralph Soule, a member of the US Navy

For all being interested in astronautics, this translation of Hermann Oberth's classic work is a truly historic event. Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws. *English Collocation in Use. Per Le Scuole Superiori* Letts & Lonsdale This IBM® Redbooks® publication discusses in detail the facilities of DB2® for z/OS®, which allow complete monitoring of a DB2 environment. It focuses on the use of the DB2 instrumentation facility component (IFC) to provide monitoring of DB2 data and events and includes suggestions for related tuning. We discuss the collection of statistics for the verification of performance of the various components of the DB2 system and accounting for tracking the behavior of the applications. We have intentionally omitted considerations for query optimization; they are worth a separate document. Use this book to activate the right traces to help you monitor the performance of your DB2 system and to tune the various aspects of subsystem and application performance.

In 2005, *The Woman at the Washington Zoo* was published to major critical acclaim. The late Marjorie Williams possessed "a special voice, one capable not just of canny political observations but of tenderness and bracing intimacy," observed the *New York Times Book Review*. Now, in a collection of profiles with the richness of short fiction, Williams limns the personalities that dominated politics and the media during the final years of the twentieth century. In these pages, Clark Clifford grieves "in his laborious baritone" a bank scandal's blow to his re-pu-taaaaaay-shun. Lee Atwater likens himself to Ulysses and pleads, "tah me to the mast!" Patricia Duff sheds "precipitous tears" over her divorce from Ronald Perelman, resembling afterwards "a garden refreshed by spring rain." *Reputation* illuminates our recent past through expertly drawn portraits of powerful - and messily human - figures.
