This proceedings book presents selected peer-reviewed papers from the 9th International Workshop on ‘ Service Oriented, Holonic and Multi-agent Manufacturing Systems for the Industry of the Future ’ organized by Universitat Politècnica de València, Spain, and held on October 3 – 4, 2019. The SOHOMA 2019 Workshop aimed to foster innovation in the digital transformation of manufacturing and logistics by promoting new concepts and methods and solutions through service orientation in holonic and agent-based control with distributed

intelligence. The book provides insights into the theme of the SOHOMA ’ 19 Workshop – ‘ Smart anything everywhere – the vertical and horizontal manufacturing integration, ’ addressing ‘ Industry of the Future ’ (IoF), a term used to describe the 4th industrial revolution initiated by a new generation of adaptive, fully connected, analytical and highly efficient robotized manufacturing systems. This global IoF model describes a new stage of manufacturing, that is fully automatized and uses advanced information,

communication and control technologies such as industrial IoT, cyber-physical production systems, cloud manufacturing, resource virtualization, product intelligence, and digital twin, edge and fog computing. It presents the IoF interconnection of distributed manufacturing entities using a ‘ system-of-systems ’ approach, discussing new types of highly interconnected and self-organizing production resources in the entire value chain; and new types of intelligent decision-making support based on

from real-time production data collected from resources, products and machine learning processing. This book is intended for researchers and engineers working in the manufacturing value chain, and specialists developing computer-based control and robotics solutions for the ' Industry of the Future ' . It is also a valuable resource for master ' s and Ph.D. students in engineering sciences programs.

Superfluous Things

Penguin

This book

highlights scientific achievements in the key areas of sustainable electricity generation and green building technologies, as presented in the vital bi-annual World Renewable Energy Network's Med Green Forum. Renewable energy applications in power generation and sustainable

development have particular importance in the Mediterranean region, with its rich natural resources and conducive climate, making it a perfect showcase to illustrate the viability of using renewable energy to satisfy all energy needs. The papers included in this work describe enabling policies

and offer pathways to further develop a broad range of renewable energy technologies and applications in all sectors - for electricity production, heating and cooling, agricultural applications, water desalination, industrial applications and for the transport sector.

Now in paperback This outstanding and original book, presented here with a new preface, examines the history of material culture in early modern China. Craig Clunas analyzes “superfluous things”—the paintings, calligraphy, bronzes, ceramics, carved jade, and other objects owned by the elites of Ming China—and describes contemporary attitudes to them. He informs his discussions with reference to both socio-cultural theory and current debates on eighteenth-century England concerning

luxury, conspicuous consumption, and the growth of the consumer society.

Unlike many books on painting that usually talk about art or painters, James Elkins’ compelling and original work focuses on alchemy, for like the alchemist, the painter seeks to transform and be transformed by the medium. In *What Painting Is*, James Elkins communicates the experience of painting beyond the traditional

vocabulary of art history. Alchemy provides a magical language to explore what it is a painter really does in her or his studio - the smells, the mess, the struggle to control the uncontrollable, the special knowledge only painters hold of how colours will mix, and how they will look. Written from the perspective of a painter-turned-art historian, *What Painting Is* is like nothing you have ever read about art.

With acquisition activity running
into the trillions of dollars, the
acquisition alternative continues
to be the favorite corporate
growth strategy of this
generation's executives.
Unfortunately, creating
shareholder value remains the
most elusive outcome of these
corporate strategies. After
decades of research and billions of
dollars paid in advisory fees, why

do these major decisions continue
to destroy value? Building on his
groundbreaking research first
cited in Business Week, Mark L.
Sirower explains how companies
often pay too much -- and
predictably never realize the
promises of increased
performance and competitiveness
-- in their quest to acquire other
companies. Armed with extensive
evidence, Sirower destroys the
popular notion that the acquisition
premium represents potential
value. He provides the first formal
and functional definition for
synergy -- the specific increases in
performance beyond those already
expected for companies to achieve
independently. Sirower's
refreshing nuts-and-bolts analysis

of the fundamentals behind acquisition performance cuts sharply through the existing folklore surrounding failed acquisitions, such as lack of "strategic fit" or corporate culture problems, and gives managers the tools to avoid predictable losses in acquisition decisions. Using several detailed examples of recent major acquisitions and through his masterful integration and extension of techniques from finance and business strategy, Sirower reveals: The unique business gamble that acquisitions represent The managerial challenges already embedded in current stock prices The competitive conditions that must be met and the organizational

cornerstones that must be in place for any possibility of synergy The precise Required Performance Improvements (RPIs) implicitly embedded in acquisition premiums and the reasons why these RPIs normally dwarf realistic performance gains The seductiveness and danger of sophisticated valuation models so often used by advisers The Synergy Trap is the first expos é of its kind to prove that the tendency of managers to succumb to the "up the ante" philosophy in acquisitions often leads to disastrous ends for their shareholders. Sirower shows that companies must meticulously plan -- and account for huge uncertainties -- before deciding to

enter the acquisition game. To date, Sirower's work is the most comprehensive and rigorous, yet practical, analysis of the drivers of acquisition performance. This definitive book will become required reading for managers, corporate directors, consultants, investors, bankers, and academics involved in the mergers and acquisitions arena. Current Catalog University of Chicago Press Lawrence Lessig, " the most important thinker on intellectual property in the Internet era " , masterfully argues that never before in human history has the power to control creative progress

been so concentrated in the hands of the powerful few, the so-called Big Media. Never before have the cultural powers-that-be been able to exert such control over what we can and can't do with the culture around us. Our society defends free markets and free speech; why then does it permit such top-down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.

First published in 1995, the award-winning Civil Engineering Handbook soon became known as the field's definitive reference. To retain its standing as a complete,

authoritative resource, the editors have incorporated into this edition the many changes in techniques, tools, and materials that over the last seven years have found their way into civil engineering research and practice. The Civil Engineering Handbook, Second Edition is more comprehensive than ever. You'll find new, updated, and expanded coverage in every section. In fact, more than 1/3 of the handbook is new or substantially revised. In particular you'll find increased focus on computing reflecting the rapid advances in computer

technology that has revolutionized many aspects of civil engineering. You'll use it as a survey of the field, you'll use it to explore a particular subject, but most of all you'll use The Civil Engineering Handbook to answer the problems, questions, and conundrums you encounter in practice.

This book provides practical information on the use of infrared (IR) spectroscopy for the analysis of materials found in cultural objects. Designed for scientists and students in the fields of archaeology, art conservation, microscopy, forensics, chemistry, and optics, the book discusses techniques for examining the microscopic amounts of complex, aged components in objects such as paintings, sculptures, and archaeological fragments.

Chapters include the history of infrared spectroscopy, the basic parameters of infrared absorption theory, IR instrumentation, analysis methods, sample collection and preparation, and spectra interpretation. The authors cite several case studies, such as examinations of Chumash Indian paints and the Dead Sea Scrolls. The Institute ' s Tools for Conservation series provides practical scientific procedures and methodologies for the practice of conservation. The series is specifically directed to conservation scientists, conservators, and technical experts in related fields. The Virginian American Library Association

The Venetian School of Painting Courier Corporation Discourses on Livy is the founding document of modern republicanism, and Harvey C. Mansfield and Nathan Tarcov have provided the definitive English translation of this classic work. Faithful to the original Italian text, properly attentive to Machiavelli's idiom and subtlety of thought, it is eminently readable. With a

substantial introduction, extensive explanatory notes, a glossary of key words, and an annotated index, the Discourses reveals Machiavelli's radical vision of a new science of politics, a vision of "new modes and orders" that continue to shape the modern ethos. "[Machiavelli] found in Livy the means to inspire scholars for five centuries. Within the Discourses, often hidden and sometimes unintended by their author, lie the seeds of modern political thought. . . . [Mansfield and Tarcov's] translation is careful and idiomatic."—Peter Stothard,

The Times "Translated with painstaking accuracy—but also great readability."—Weekly Standard "A model of contemporary scholarship and a brave effort at Machiavelli translation that allows the great Florentine to speak in his own voice."—Choice
