Careers in Biomedical Engineering Paul Publications  
Careers in Biomedical Engineering offers readers a comprehensive overview of new career opportunities in the field of biomedical engineering. The book begins with a discussion of the extensive changes which the biomedical engineering profession has undergone in the last 10 years. Subsequent sections explore educational, training and certification options for a range of subspecialty areas and diverse workplace settings. As research organizations are looking to biomedical engineers to provide project-based assistance on new medical devices and/or help on how to comply with FDA guidelines and best practices, this book will be useful for undergraduate and graduate biomedical students, practitioners, academic institutions, and placement

services. Explores various positions in the field of biomedical engineering, including highly interdisciplinary fields, such as CE/IT, rehabilitation engineering and neural engineering Offers readers informative case studies written by the industry's top professionals, researchers and educators Provides insights into how educational, training and retraining programs are changing to meet the needs of quickly evolving professions  
All Figured Out Springer  
Nature  
To large organizations, business intelligence (BI) promises the capability of collecting and analyzing internal and external data to generate knowledge and value, thus providing decision support at the strategic, tactical, and operational levels. BI is now impacted by the “ Big Data ” phenomena and the evolution of society and users. In particular, BI applications must cope

---

with additional heterogeneous (often Web-based) sources, e.g., from social networks, blogs, competitors', suppliers', distributors' data, governmental or NGO-based analysis and papers, or from research publications. In addition, they must be able to provide their results also on mobile devices, taking into account location-based or time-based environmental data. The lectures held at the Third European Business Intelligence Summer School (eBISS), which are presented here in an extended and refined format, cover not only established BI and BPM technologies, but extend into innovative aspects that are important in this new environment and for novel applications, e.g., pattern and process mining, business semantics, Linked Open Data, and large-scale data management and

analysis. Combining papers by leading researchers in the field, this volume equips the reader with the state-of-the-art background necessary for creating the future of BI. It also provides the reader with an excellent basis and many pointers for further research in this growing field.

Nature  
Disease Mapping: From  
Foundations to  
Multidimensional Modeling  
guides the reader from the  
basics of disease mapping  
to the most advanced  
topics in this field. A  
multidimensional  
framework is offered that  
makes possible the joint  
modeling of several risks  
patterns corresponding to  
combinations of several  
factors, including age

group, time period, disease,  
etc. Although theory will be  
covered, the applied  
component will be equally  
as important with lots of  
practical examples offered.  
Features: Discusses the  
very latest developments  
on multivariate and  
multidimensional mapping.  
Gives a single state-of-the-  
art framework that unifies  
most of the previously  
proposed disease mapping  
approaches. Balances  
epidemiological and  
statistical points-of-view.  
Requires no previous  
knowledge of disease  
mapping. Includes practical  
sessions at the end of each  
chapter with  
WinBUGs/INLA and real  
world datasets. Supplies R  
code for the examples in  
the book so that they can  
be reproduced by the  
reader. About the Authors:  
Miguel A. Martinez Beneito  
has spent his whole career  
working as a statistician for  
public health services, first  
at the epidemiology unit of

---

the Valencia (Spain) regional health administration and later as a researcher at the public health division of FISABIO, a regional bio-sanitary research center. He has been also the Bayesian Hierarchical Models professor for several seasons at the University of Valencia Biostatistics Master. Paloma Botella Rocamora has spent most of her professional career in academia although she now works as a statistician for the epidemiology unit of the Valencia regional health administration. Most of her research has been devoted to developing and applying disease mapping models to real data, although her work as a statistician in an epidemiology unit makes her develop and apply statistical methods to health data, in general.
