It is responsible for loading and transferring control to an operating system kernel software (such as Linux or GNU Mach). The kernel, in turn, initializes the rest of the operating system (e.g. a GNU system). GNU GRUB is a very powerful boot loader, which can load a wide variety of free operating systems, as well as proprietary operating systems with chain-loading. GRUB is designed to address the complexity of booting a personal computer; both the program and this manual are tightly bound to that computer platform, although porting to other platforms may be addressed in the future. One of the important features in GRUB is flexibility; GRUB understands filesystems and kernel executable formats, so you can load an arbitrary operating system the way you like, without recording the physical position of your kernel on the disk. Thus you can load the kernel just by specifying its file name and the drive and partition where the kernel resides. This manual is available online for free at gnu.org. Volume II of *The Official History of the UK Strategic Nuclear Deterrent* provides an authoritative and in-depth examination of the British government's strategic nuclear policy from 1964 to 1970. Written with full access to the UK documentary record, Volume II examines the controversies that developed over nuclear policy following the arrival in office of a Labour government led by Harold Wilson in October 1964 that openly questioned the independence of the deterrent. Having decided to preserve the Polaris programme, Labour ministers were nevertheless committed not to develop another generation of nuclear weapons beyond those in the pipeline, placing major doubts over the long-term future of the nuclear programme and collaboration with the United States. Defence planners also became increasingly concerned that the deployment of Soviet anti-ballistic missile (ABM) defences around Moscow threatened to undermine the ability of Polaris to fulfil its role as a national strategic nuclear deterrent. During 1967, under heavy pressures to control defence spending, a protracted debate was conducted within Whitehall over the future of Polaris and how to respond to the evolving ABM challenge. The volume concludes with Labour's defeat at the general election of June 1970, by which time the Royal Navy had assumed the nuclear deterrent role from the RAF, and plans had already been formulated for a UK project to improve Polaris which could both ensure its continuing credibility and rejuvenate the Anglo-American nuclear relationship. This book will be of much interest to students of

British politics, Cold War history, nuclear proliferation and international relations.

Their insights are extraordinary, their behaviors unusual. Their brains—shaped by the era of microprocessors, access to limitless information, and 24-hour news and communication—are remapping, retooling, and evolving. They're not superhuman. They're your twenty-something coworkers, your children, and your competition. Are you keeping up? In *iBrain*, Dr. Gary Small, one of America's leading neuroscientists and experts on brain function and behavior, explores how technology's unstoppable march forward has altered the way young minds develop, function, and interpret information. *iBrain* reveals a new evolution catalyzed by technological advancement and its future implications: Where do you fit in on the evolutionary chain? What are the professional, social, and political impacts of this new brain evolution? How must you adapt and at what price? While high-tech immersion can accelerate learning and boost creativity, it also has its glitches, among them the meteoric rise in ADD diagnoses, increased social isolation, and Internet addiction. To compete and thrive in the age of brain evolution, and to avoid these potential drawbacks, we must adapt, and *iBrain*—with its Technology Toolkit—equips all of us with the tools and strategies needed to close the brain gap.
