Computational Intelligence in Data Mining - Volume 1 Springer

The contributed volume aims to explicate and address the difficulties and challenges for the seamless integration of two core disciplines of computer science, i.e., computational intelligence and data mining. Data Mining aims at the automatic discovery of underlying non-trivial knowledge from datasets by applying intelligent analysis techniques. The interest in this research area has experienced a considerable growth in the last years due to two key factors: (a) knowledge hidden in organizations' databases can be exploited to improve strategic and managerial decision-making; (b) the large volume of data managed by organizations makes it impossible to carry out a manual analysis. The book addresses different methods and techniques of integration for enhancing the overall goal of data mining. The book helps to disseminate the knowledge about some innovative, active research directions in the field of data mining, machine and computational intelligence, along with some current issues and applications of related topics.

An eyewitness account of major 20th century social movements Born a red-diaper baby, Norman Cantor, as a 4 and 1/2 year-old in 1947, first experiences the vicious public hostility toward his father, a major figure in Communist Party USA: "I hear and see a hostile crowd assembled on the street below our apartment. I can't make out the words they're yelling, but I sense the shrill, threatening tone. Suddenly, I glimpse flames shooting upward from below. Someone

in the crowd has ignited the awning of my grandfather's liquor store. The flames get doused, but I am terrified." His father goes underground and Norman gets raised by a mother who was a pioneering women's lawyer promoting civil rights and workers' interests. During a distinguished career as a law professor, Cantor pioneers in advancing the "death with dignity" movement. First, as a participant in the landmark Quinlan case that set the pattern for American end-of-life jurisprudence. More recently, as an advocate for people intent on avoiding immersion in advanced Alzheimer's disease. Finally, Cantor becomes a participant in the liberal Zionist movement seeking to maintain a Jewish homeland in Israel with full citizenship and civil rights for all its inhabitants. My Eccentric Family is a rare journey with universal lessons that is simultaneously a deeply personal memoir and an incisive work of history. Includes engaging encounters with Ruth Bader Ginsburg, mafia kingpin Angelo Bruno, and Supreme Court Justice Thurgood Marshall.

Yvonne Weaver created this coloring book to provide hours of enjoyment. Yvonne has chosen to make each page something children of all ages can color and enjoy with their family and friends. She has included desert scenes as well as reptiles and migratory birds who visit the wetland areas. The flowers are just for fun; she loves to color them herself. The desert comes alive in the spring with many beautiful colored wildflowers. The desert scenery changes colors as the sun rises and sets. Yvonne saw a need for a coloring book to encourage children to love our planet and care for our wildlife. She suggests, "Just have fun with it."

"XOOPS (eXtensible Object Oriented Portal System) is an Open Source application platform written in PHP and database for developing small to large interactive dynamic community websites, company portals, intranets, weblogs, and much more. XOOPS uses Smarty, one of the most popular template engines in PHP, which makes it easier for designers to get used to the syntax: they don't have to deal with raw PHP code. This book covers the whole workflow of building a XOOPS theme from scratch. This is a designer's guide, so some knowledge of XHTML and CSS is assumed, but PHP know-how is not necessary."--Resource description page.
