Space and Time in Mediterranean Prehistory addresses these two concepts as interrelated, rather than as separate categories, and as a means for understanding past social relations at different scales. The need for this volume was realised through four main observations: the ever growing interest in space and spatiality across the social sciences; the comparative theoretical and methodological neglect of time and temporality; the lack in the existing literature of an explicit and balanced focus on both space and time; and the large amount of new information coming from prehistoric Mediterranean. It focuses on the active and interactive role of space and time in the production of any social environment, drawing equally on contemporary theory and on case-studies from Mediterranean prehistory. Space and Time in Mediterranean Prehistory seeks to break down the space-time continuum, often assumed rather than inferred, into space-time units and to uncover the varying and variable interrelations of space and time in prehistoric societies across the Mediterranean. The volume is a response to the dissatisfaction with traditional views of space and time in prehistory and revisits these concepts to develop a timely integrative conceptual and analytical framework for the study of space and time in archaeology.

Psychology of the Image outlines a theoretical framework bringing together the semiotic concepts developed by Charles Peirce, the sociological insights of Ervin Goffman and the psychoanalytic ideas of Jacques Lacan. Image studies in fashion, advertising, photography, film studies and psychology have been influenced by these theorists in significant ways. The framework presented helps the reader understand how these ideas relate to the study of different domains of the image: the internal imagery of dreams, external images such as the photograph and image processes which span both contexts, e.g., images we have about ourselves. The topics discussed are organised into three themes. The first considers mental imagery, including sound and dreams. The second addresses the interdependent nature of internal and external images, e.g., the gendered self and social identity. In the third theme, attention turns to external images including television, film, photography, the computer and the internet. Psychology of the Image will be of interest to undergraduates, postgraduates, lecturers and researchers in the fields of psychology, media studies and sociology.

Space and Time in Mediterranean Prehistory Springer

This volume explores the use and relevance of qualitative methods for the study of quality of life. It analyzes the role of qualitative researcher and the role of the context and the culture in quality of life studies. It presents the use of qualitative methods in real projects carried out in specific fields: geography, health, community studies, labor life and yoga. Finally, the book proposes the use of mixed methods that are considered as the third methodological approach in social research. The main purpose of using qualitative methods is to understand what it means for participants to be involved in certain events, situations and actions. Such methods help understand the context in which participants act and the influence of that context on their actions. The decision to use a particular methodology implies a philosophic, theoretical and political decision. Qualitative methodology constitutes an approach that is essential for understanding people ' s experiences of well-being and discovering new issues related to quality of life.
