(1983-2004), and the transnational milieu of artists, dealers and critics that surrounded them. Drawing on the archives of dealers Pat Hearn and Colin de Land--both, independently, legendary players on the New York art scene of the 1980s and '90s, and one of the great love stories of the art world--this publication illustrates their distinctive artistic practices, significant exhibitions and events, and daily business. Hearn and de Land championed art that challenged the business of running an art gallery; artists like Ren é e Green and Susan Hiller, Andrea Fraser and Cady Noland, who employed conceptualism and installation, social and institutional critique. Contributing to the history of exhibitions, institutions and curating, *The Conditions of Being Art* addresses a significant gap in this literature around experimental commercial spaces in recent art history. This publication is the first book-length critical account of the alternative commercial gallery practices of the 1990s, a moment and a scene that is extremely influential to many of today's art dealers, curators and artists. Hearn and de Land's gallery practices explored new experimental and

---

ethical possibilities within the selling of art, testing the relationship of contemporary art to its markets. In this volume, full-color images, in-depth scholarly investigations and detailed gallery histories vibrantly document how Hearn and de Land tested new notions of what an art gallery could be.

Dr. Albert G. Mackey, also the author of The Lexicon of Freemasonry appears as author of this " Encyclopedia of Freemasonry and its Kindred Sciences," which, being a library in itself, superseded most of the Masonic works which have been tolerated by the

---

craft—chiefly because none better could be obtained. Here, in one giant volume is a work which fulfils the hope which sustained the author through ten years' literary labor, that, under one cover he "would furnish every Mason who might consult its pages the means of acquiring a knowledge of all matters connected with the science, the philosophy, and the history of his order." For more than thirty years Dr. Mackey has devoted earnest and constant study and research to the history, the objects, and the condition of Masonry. In the present work, the crowning and successful result of a life's labors, he has received no assistance from any one. He says, " Every article was written by myself," and he adds, which would extenuate errors, had he fallen into any, "For twelve months, too, of the time occupied upon this work, I suffered from an affection of

the sight, which forbade all use of the eyes for purposes of study. During that time, now happily passed, all authorities were consulted by the willing eyes of my daughters—all writing was done by their hands. I realized for a time the picture so often painted of the blind bard dictating his sublime verses to his daughters," and his preface closes with the words, "Were I to dedicate this work at all, my dedication should be—To Filial Affection." Up to the present time the modern literature of Freemasonry has been diffuse, lumbering, unreliable, and, out of all reasonable proportions. Audio Oxford University Press, USA

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low

---

contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary.

Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

This book explores the varied vernacular forms and rich oral traditions which were such a part of popular culture in early modern England. It focuses, in particular, upon dialect speech and proverbial wisdom, "old wives' tales" and children's lore, historical legends and local customs, scurrilous versifying and scandalous rumour-mongering. Adam Fox

argues that while the spoken word provides the most vivid insight into the mental world of the majority in this semi-literate society, it was by no means untouched by written influences. Even at the beginning of the period, centuries of reciprocal infusion between complementary media had created a cultural repertoire which had long ceased to be purely oral. Thereafter, the expansion of literacy together with the proliferation of texts both in manuscript and print saw the rapid acceleration and elaboration of this process. By 1700 popular traditions and modes of expression were the product of a fundamentally literate environment to a much greater extent than

has yet been appreciated.

Owing to their unique state of preservation, mummies provide us with significant historical and scientific knowledge of mankind's past. This handbook, written by prominent international experts in mummy studies, offers readers a comprehensive guide to new understandings of the field's most recent trends and developments. It provides invaluable information on the health states and pathologies of historic populations and civilizations, as well as their socio-cultural and religious characteristics. Addressing the developments in mummy

studies that have taken place over the past two decades -- which have been neglected for as long a time -- the authors excavate the ground-breaking research that has transformed scientific and cultural knowledge of our ancient predecessors. The handbook investigates the many new biotechnological tools that are routinely applied in mummy studies, ranging from morphological inspection and endoscopy to minimally invasive radiological techniques that are used to assess states of preservation. It also looks at the paleoparasitological and pathological approaches that have been employed to reconstruct the lifestyles and pathologic conditions

of ancient populations, will make. This book and considers the techniques that have been applied to enhance biomedical knowledge, such as craniofacial reconstruction, chemical analysis, stable isotope analysis and ancient DNA analysis. This interdisciplinary handbook will appeal to academics in historical, anthropological, archaeological and biological sciences, and will serve as an indispensable companion to researchers and students interested in worldwide mummy studies.

In the century between the accession of Elizabeth I and the restoration of Charles II, a horticultural revolution took

place in England, making it a leading player in the European horticultural game. Ideas were exchanged across networks of gardeners, botanists, scholars, and courtiers, and the burgeoning vernacular book trade spread this new knowledge still further--reaching even the growing number of gardeners furnishing their more modest plots across the verdant nation and its young colonies in the Americas. Margaret Willes introduces a plethora of garden

---

enthusiasts, from the renowned to the legions of anonymous workers who created and tended the great estates. Packed with illustrations from the herbals, design treatises, and practical manuals that inspired these men--and occasionally women--Willes's book enthrallingly charts how England's garden grew.
