Renowned philosopher and cultural theorist Kristeva (*Powers of Horror: An Essay on Abjection*) offers an extended consideration of artistic figurations of the severed head, the organizing theme to an exhibition she coordinated at the Louvre in 1998. Though she follows a single historical trajectory, moving from Paleolithic skull cults to antique Greek sculpture to the Surrealist drawings, Kristeva eschews the disciplinary constraints of art history, instead employing psychoanalysis to explore the intertwined problems of representation and mortality posed by the severed head. For Kristeva, the capacity to figure the life of the mind first requires a confrontation with this horrific object that stands at the boundary between life and death, registering not only the loss of corporeal form but also subjective interiority. Though this book does not engage with recent images of decapitation, it is not without contemporary political-cultural import; for Kristeva, these cruel artistic figurations offer us the capacity to contemplate the sacred within a technology-driven contemporary visual culture. Verdict While a challenging text, this beautifully written and richly layered meditation on mortality and representation will undoubtedly appeal to those readers interested in semiotic and psychoanalytically informed readings of art. -Jonathan Patkowski, CUNY Graduate Ctr. Architecture and Modern Literature University of Michigan Press

Chronicles Egyptian civilization from the Predynastic Period to the end of Roman rule, arranged thematically in chapters such as "Religion of the Living," "Architecture and Building," and "Everyday Life."

The Severed Head Springer Science & Business Media

Owing to their unique state of preservation, mummies provide us with significant historical and scientific knowledge of humankind's past. This handbook, written by prominent international experts in mummy

studies, offers readers a comprehensive guide to new understandings of the field's most recent trends and developments. It provides invaluable information on the health states and pathologies of historic populations and civilizations, as well as their socio-cultural and religious characteristics. Addressing the developments in mummy studies that have taken place over the past two decades – which have been neglected for as long a time – the authors excavate the groundbreaking research that has transformed scientific and cultural knowledge of our ancient predecessors. The handbook investigates the many new biotechnological tools that are routinely applied in mummy studies, ranging from morphological inspection and endoscopy to minimally invasive radiological techniques that are used to assess states of preservation. It also looks at the paleoparasitological and pathological approaches that have been employed to reconstruct the lifestyles and pathologic conditions of ancient populations, and considers the techniques that have been applied to enhance biomedical knowledge, such as craniofacial reconstruction, chemical analysis, stable isotope analysis and ancient DNA analysis. This interdisciplinary handbook will appeal to academics in historical, anthropological, archaeological and biological sciences, and will serve as an indispensable companion to researchers and students interested in worldwide mummy studies.

Durer's Journeys BRILL

A compact reference to leading world scientists and their achievements *General Catalogue of Printed Books* Verso Books

The Sixth Edition continues the tradition of this great book by applying anatomic knowledge to state-of-the-art imaging. Chapters have been reorganized to help the reader better interpret imaging studies by clearly demonstrating what to expect and where to look for disease spread from each individual organ. Up-to-date chapters explore the dynamic concept, explain its embryologic and anatomic basis, and classify the mechanisms of disease progression. The latest imaging modalities, including CT, MRI, ultrasound, and PET, are incorporated throughout.

These fourteen essays address controversies over a variety of cultural properties, exploring them from perspectives of law, archeology, physical anthropology, ethnobiology, ethnomusicology, history, and cultural and literary study. The book divides cultural property into three types: Tangible, unique property like the Parthenon marbles; intangible property such as folktales, music, and folk remedies; and communal "representations," which have lead groups to censor both outsiders and insiders as cultural traitors.

Urban areas have been caught up in a turbulent process of transformation over the past 50 years and changes have been rapid, with issues such as mobility, nature, water management,

energy use and public space featuring prominently. In each Olympic year since 1988, the Faculty of Architecture at Delft University of Technology has held an international conference focusing on the connection between research and design, exploring the field of tension between science, technology and art. This book presents the proceedings of the latest in this series of conferences: New Urban Configurations, held in Delft, the Netherlands, in October 2012 in collaboration with the European Association for Architectural Education (EAAE) and the International Seminar on Urban Form (ISUF). This edition of the conference discussed the role and critical potential of the architectural project in the transformation process of cities and territories that leads to new urban configurations. The publication contains all 140 accepted papers and a selection of the keynote lectures presented at the conference. The papers have been grouped into five main themes: innovation in building typology; infrastructure and the city; complex urban projects; green spaces, and delta urbanism. Four of these major topics are further divided into several subtopics. This book will be of interest to everyone involved in designing, building, thinking about as well as managing the urban landscape and territory.

Meyers' Dynamic Radiology of the Abdomen Brigham Young University Press

This book shows how vitamin A deficiency – before the vitamin was known to scientists – affected millions of people throughout history. It is a story of sailors and soldiers, penniless mothers, orphaned infants, and young children left susceptible to blindness and fatal infections. We also glimpse the fortunate ones who, with ample vitamin A-rich food, escaped this elusive stalker. Why were people going blind and dying? To unravel this puzzle, scientists around the world competed over the course of a century. Their persistent efforts led to the identification of vitamin A and its essential role in health. As a primary focus of today's international public health efforts, vitamin A has saved hundreds of thousands of lives. But, we discover, they could save many more were it not for obstacles erected by political and ideological zealots who lack a historical perspective of the problem. Although exhaustively researched and documented, this book is written for intellectually curious lay readers as well as for specialists. Public health professionals, nutritionists, and historians of science and medicine have much to learn from this book about the cultural and scientific origins of their disciplines. Likewise, readers interested in military and cultural history will learn about the interaction of health, society, science, and politics. The author's presentation of vitamin A deficiency is likely to become a classic case study of health disparities in the past as well as the present.

Antistatic Sprays British Archaeological Reports Limited

This alphabetical reference covers the entire spectrum of the recording of sound, from Edison's experimental cylinders to contemporary high technology. The major focus is on the recorded sound industry in the US, with additional material on Canada, Europe, Australia, and New Zealand. The coverage is particularly strong on the earliest periods of recorded sound history--1877-1948, the 78 rpm era and 1949-1982, the LP era. In addition to performers and their work, entries also cover important commercial organizations, individuals who made significant technical contributions, societies and associations, sound archives and libraries, magazines, catalogs, award winners, technical topics, special and foreign terms, copyright laws, and other areas of interest. Discover how the ancient Egyptians controlled their immortal destiny! This book, edited by Foy Scalf, explores what the Book of the Dead was believed to do, how it worked, how it was made, and what happened to it.

Audio Columbia University Press

A great silence has settled upon a drowned world. In the final battle of their final war, the massive citysub Universalis and Population reduced each other to ruins. One lays wrecked on the seafloor. The other, beached and lifeless, litters the island of pristine polar ice it tried to destroy. Pockets of

survivors huddle together. On the frigid surface, Ralla Gattley and Thom Vargas cling to life and each other. Below, the soldier Geran Lo fights relentlessly to free trapped and drowning civilians. As they struggle against a world determined to kill them, a new and even more dangerous menace approaches. Undersea Atrophia is the second book in the Undersea Saga.

The Shallows Springer

Revolutionary Paris and the Market for Netherlandish Art restores attention to the aesthetic, intellectual, and economic link between two key periods in the history of art: the "Golden Age" of Dutch and Flemish painting and that of the French Revolution.

Albrecht Durer's (1471-1528) travels across Europe in the early Renaissance led to a fascinating interchange of ideas with his fellow artists, both northern and southern. This book explores Durer's extensive influence on his contemporaries and his sources of inspiration, bringing together paintings, drawings, sculptures, glass, and prints by artists he may have encountered along the way. It also examines the complex development of Durer's own status as an artist entrepreneur and innovator in artistic theory. Durer's journal records his pursuit of commissions and details his visits to Italy, Antwerp, Cologne, Brussels, Ghent, and Bruges. During this time he produced a trove of landscapes, portraits, and animal drawings, and studies for larger projects, such as the painting of Saint Jerome that would become his most copied work. Durer's travels informed some of his most exciting and engaging works, and their visual legacy extended far beyond his lifetime and throughout the continent. Exhibition: The National Gallery, London, UK(06.03.-13.06.2021) / Suermondt-Ludwig Museum, Aachen, Germany (18.07.-24.10.2021).

Wonders and the Order of Nature, 1150-1750 Hydroelectric Plant Construction Cost and Annual Production Expenses CD-ROMs in Print Poor's Manual of Industrials Business & Legal CD-ROMS in Print General Catalogue of Printed Books The Art Of Seduction Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

The Vitamin A Story Profile Books

This book contains 22 chapters, 2 appendices (of the nematocides and species mentioned throughout the book) and 24 colour plates covering all aspects of practical plant nematology in subtropical and tropical agriculture, including rice, cereals, sweet potatoes, root and tuber crops, food legumes, vegetables, groundnut, citrus, tree and fruit crops, coconut and other palms, coffee, cocoa, tea, bananas, sugarcane, tobacco, pineapple, cotton, other tropical fibres, spices and medicinal plants. It provides practical guidance on the methods of extracting, processing and diagnosing different plant and soil nematodes and on integrated nematode management. This book is intended for those studying and working in the area of crop protection.

The Silver Canvas BoD – Books on Demand

The Book of the Dead Chicago, Marquis-Who's Who, Incorporated [1968]

Astronomy, Papyrus, and Covenant is the third volume in the FARMS series and includes papers from a recent conference on the subject.

Rather than focus on biblical interpretations of Abraham, each chapter instead explores a lesser-known aspect of Abrahamic studies: his startling visions of the heavens, comparisons between the Book of Abraham and other ancient texts, such as the Dead Sea Scrolls, and an investigation into shifting interpretations of Abraham throughout nineteenth-century America. The compilation is an excellent introduction to recent scholarship on the subject and will prove to be fascinating reading.
