your life – you have people with strong low self-efficacy and don ' t believe in your abilities. What is self-efficacy? What are the main four sources of it? How can you become more confident in your skills? These are some of the questions I ' ll answer in this short book. The advice you ' re about to read is based both on scientific research and my personal experience. I will share fundamental knowledge that will help you build more confidence in your abilities and reach your goals. Here are just a few things you will learn from the book: - Five characteristics of

people with strong self-efficacy and five characteristics of people with weak self-efficacy. These behaviors determine whether you ' ll realize your full potential or succumb to mediocrity. - What you can learn from building a university in space (and what it has to do with the belief in your own abilities). It ' s the single most important thing to achieve bigger and bigger goals. - A simple therapy to teach you how to handle failure the right way. It ' s uncomfortable, but you can be sure it will kill your fear of failure once and for all. - What a strange

study about hitting dolls or treating them kindly can teach you about how others affect your beliefs about your competence. It ' s the second most effective way to increase the strength of your belief in your abilities. - What a phenomenon discovered by a German industrial psychologist can teach you about motivation. There ' s a simple way to inspire you to put more effort into your goals. - The #1 key to improving the confidence in your abilities. If you don ' t have time to read the entire book, read this one tip alone. - What a

study on experts and novices can teach you about how experts approach problems. You too can adapt this behavior to shorten your learning curve and develop a stronger belief in your abilities. If you don ' t actively work on developing a strong sense of self-efficacy, making any kind of changes in your life will be an extremely difficult ordeal. Though the Japanese abacus may appear mysterious or even primitive, this intriguing tool is capable of amazing speed and accuracy. it is still widely used throughout the shop and markets of Asia and its popularity shows no sign of decline.

This volume is designed for the student desiring a greater understanding of the abacus and its calculative functions. The text provides thorough explanations of the advanced operations involving negative numbers, decimals, different units of measurement, and square roots. Diagrams illustrate bead manipulation, and numerous exercises

provide ample practice. Concise and easy-to-follow, this book will improve your abacus skills and help you perform calculations with greater efficiency and precision. Practical Recording Techniques Tuttle Publishing Engaging students in learning about their subject is a central concern for all teachers and teacher educators. How teachers view and use the pedagogic potential of different tasks to

engage pupils with international knowledge in different subjects, is central to this endeavour. Designing Tasks in Secondary Education explores models for effective task design, helping you translate the curriculum into the tasks and activities that you ask your students to do in order to facilitate developmental or higher-level understanding of curriculum content. Written by experts in the field of education from a range of subjects and including a foreword written by renowned author Professor Walter Doyle, this book spans an

context and offers a refreshing alternative of how to plan and design tasks that will not only intellectually stimulate but improve teaching quality. Key topics explored include: Designing tasks which engage learners with knowledge Policy perspectives on task design Designing cognitively demanding classroom tasks Task design issues in the secondary subjects Designing Tasks in Secondary Education offers essential insight into task design and its importance for enhancing

subject understanding and student engagement. It will challenge and support all education professionals concerned with issues of curriculum design, subject knowledge, classroom organisation, agency in the learning process and teaching quality.
