With the development of new direct interfaces between the human brain and computer systems, the time has come for an in-depth ethical examination of the way these neuronal interfaces may support an interaction between the mind and

cyberspace. In so doing, this book does not hesitate to blend disciplines including neurobiology, philosophy, anthropology and politics. It also invites society, as a whole, to seek a path in the use of these interfaces enabling humanity to prosper while avoiding the relevant risks. As such, the volume is the first extensive study in cyberneuroethics, a subject matter which is certain to have a significant impact in the 21st century and beyond.

Enhanced Methods in Computer Security, Biometric and Artificial Intelligence Systems contains over 30 contributions from leading European researchers showing the present state and future directions of computer science research. "Methods of Artificial Intelligence and Intelligent Agents" contains 13 contributions analyzing such areas of AI as fuzzy set theory, predicate logic, neural networks, clustering, data mining and others. It also

presents applications of AI as possible solutions for problems like firm bankruptcy, soil erosion, flight control and others. "Information Technology Security" covers three important areas of security engineering in information systems: software security, public key infrastructure and the design of new cryptographic protocols and algorithms. "Biometric Systems" comprises 11 contributions dealing with face picture analysis and recognition systems. This chapter focuses on known methods of biometric problem solution as well as the design of new models.

Translation is living through a period of revolutionary upheaval. The effects of digital technology and the internet on translation are continuous, widespread and profound. From automatic online translation services to the rise of crowdsourced

translation and the proliferation of translation Apps for smartphones, the translation revolution is everywhere. The implications for human languages, cultures and society of this revolution are radical and far-reaching. In the Information Age that is the Translation Age, new ways of talking and thinking about translation which take full account of the dramatic changes in the digital sphere are urgently required.

Michael Cronin examines the role of translation with regard to the debates around emerging digital technologies and analyses their social, cultural and political consequences, guiding readers through the beginnings of translation's engagement with technology, and through to the key issues that exist

today. With links to many areas of study, Translation in the Digital Age is a vital read for students of modern languages, translation studies, cultural studies and applied linguistics.

These fourteen essays address controversies over a variety of cultural properties, exploring them from perspectives of law, archeology, physical anthropology, ethnobiology, ethnomusicology, history, and cultural and literary study. The book divides cultural property into three types: Tangible, unique property like the Parthenon marbles; intangible property such as folktales, music, and folk remedies; and communal "representations," which have lead groups to censor both outsiders and insiders as cultural traitors.

Jennifer Houle's debut

collection, The Back

Channels, reflects the effort

to build a meaningful life in

a rapidly changing culture,

in a region afflicted, as

many are, with outmigration

and an economy of anxiety

and hard choices. Here,

where memories of a more

prosperous past loom large,

she takes us to the

backwoods where a

discouraged woman walks,

down to the shore beyond

the fairgrounds, and into the

parking lots where smokers

gather to talk about layoffs

or pay cuts. Houle's poems

invite the reader to listen in

on these moments and pause

among these landscapes,

never mistaking its often

rural settings for places of

retreat or escape. The

largely Acadian culture

depicted in these poems may still be influenced by the past, caught in its own reflected image, but it moves, as do the poems, to a steady, if moody, rhythm determined to find meaning and purpose in spite of difficulties, flux, and a seemingly pervasive cynicism. Reminiscent of Karen Solie's early work, Houle's brilliance as a poet is her mastery of language and keen sense of observation with which she draws the reader in. These poems come from a place of grappling, an attempt to find meaning, beauty and connection in the day-to-day, without being confined by it.

Owing to their unique state of preservation, mummies provide us with significant historical and scientific

knowledge of humankind's past. This handbook, written by prominent international experts in mummy studies, offers readers a comprehensive guide to new understandings of the field's most recent trends and developments. It provides invaluable information on the health states and pathologies of historic populations and civilizations, as well as their socio-cultural and religious characteristics. Addressing the developments in mummy studies that have taken place over the past two decades – which have been neglected for as long a time – the authors excavate the ground-breaking research that has transformed scientific and cultural knowledge of our ancient predecessors. The handbook investigates the many new biotechnological tools that are routinely applied in mummy studies, ranging from morphological inspection and endoscopy to minimally

invasive radiological techniques that are used to assess states of preservation. It also looks at the paleoparasitological and pathological approaches that have been employed to reconstruct the lifestyles and pathologic conditions of ancient populations, and considers the techniques that have been applied to enhance biomedical knowledge, such as craniofacial reconstruction, chemical analysis, stable isotope analysis and ancient DNA analysis. This interdisciplinary handbook will appeal to academics in historical, anthropological, archaeological and biological sciences, and will serve as an indispensable companion to researchers and students interested in worldwide mummy studies.

Exploring experimental attitudes in music
Experimental Affinities in Music brings together diverse artistic, musicological, historical, and philosophical essays, enhancing a broad discourse on artistic experimentation, and exploring various experimental attitudes in music composed between the thirteenth and twentieth centuries. The golden thread running through the different chapters is the quest for inherently experimental musical practices, a quest pursued from interrogating, descriptive, or challenging perspectives, and always in

relation to concrete music examples. Experimental is taken as an adventurous compositional, interpretive, or performative attitude that can cut across different ages and styles. Affinities suggest connectors and connections, convergences, contiguities, and adjacencies that are found in and through a diversity of approaches and topics. The texts share a common genesis: the lectures of the International Orpheus Academies for Music and Theory convened by Luk Vaes (2011) and Paulo de Assis (2012, 2013). The affinities found in this volume include essays by Lydia Goehr, Felix Diergarten, Mark Lindley, Martin Kirnbauer, Edward Wickham, Lawrence Kramer, Hermann Danuser, and Thomas Christensen, as well as interviews with pianist Leon Fleisher, with pianist-composer Frederic Rzewski, and with composer Helmut Lachenmann. Contributors

Paulo de Assis (Orpheus Institute, Ghent), Thomas Christensen (University of Chicago), Hermann Danuser (Humboldt University), Felix Diergarten (Schola Cantorum Basiliensis), Leon Fleisher (pianist), Lydia Goehr (Columbia University), Martin Kirnbauer (University of Basel), Lawrence Kramer (Fordham University), Helmut Lachenmann (composer), Mark Lindley (University of Hyderabad), Frederic Rzewski (pianist-composer), Luk Vaes (Orpheus Institute, Ghent), Edward Wickham (St Catharine's College, Cambridge)

This is a historical work on life in pre-Columbian America. It includes the theories of the origins of the indigenous peoples of America and the main developments in their political, cultural, and economic life. Although published about a century ago and presenting possibly outdated views, this work is still an interesting source of information and a great resource for historical research.

This dissertation describes a theory of memory representation, organization, and processing for in-depth understanding of complex narrative texts. Complicated texts require that many different knowledge sources be represented, coordinated, instantiated, searched and applied. Such sources include: goals, plans, scripts, physical objects,

settings, interpersonal relationships, social roles, and emotional reactions. This theory is implemented in BORIS, a computer program which reads and answers questions about narratives involving such topics as: divorce, legal disputes, personal favors, and service contracts.

The Back Channels Hal Leonard Corporation
 ‘Interspersed with acts of breathtaking linguistic daring.’ Charlotte Mendelson, Observer Book of the Year Opening with a powerful and tender ‘Ode to the Hymen’, Sharon Olds uses this age-old poetic form to address many aspects of herself, in a collection that is centred around the female body and female pleasures, and touches along the way on parts of her own story which will be familiar from earlier works, each episode and memory now burnished by the wisdom and grace of looking back. In such poems as ‘Ode to My Sister’, ‘Ode of Broken Loyalty’, ‘Ode to My Whiteness’, ‘Blow Job Ode’, ‘Ode to the Last 38 Trees in New York City Visible from This Window’, Olds treats us to an intimate self-examination that, like all her work, is universal and by turns searing and charming in its honesty. From the early bodily joys and sorrows of her girlhood to the recent deaths of those dearest to her – the ‘Sheffield Mountain Ode’ for Galway Kinnell is one of the most stunning pieces here – Olds shapes her world in language that is

startlingly fresh, profound in its conclusions, and life-giving for the reader.

Claiming the Stones, Naming the Bones Springer Science & Business Media

Reading this book will make you less sure of yourself—and that’s a good thing. In *The Invisible Gorilla*, Christopher Chabris and Daniel Simons, creators of one of psychology’s most famous experiments, use remarkable stories and counterintuitive scientific findings to demonstrate an important truth: Our minds don’t work the way we think they do. We think we see ourselves and the world as they really are, but we’re actually missing a whole lot. Chabris and Simons combine the work of other researchers with their own findings on attention, perception, memory, and reasoning to reveal how faulty intuitions often get us into trouble. In the process, they

explain:

- Why a company would spend billions to launch a product that its own analysts know will fail
- How a police officer could run right past a brutal assault without seeing it
- Why award-winning movies are full of editing mistakes
- What criminals have in common with chess masters
- Why measles and other childhood diseases are making a comeback
- Why money managers could learn a lot from weather forecasters

Again and again, we think we experience and understand the world as it is, but our thoughts are beset by everyday illusions. We write traffic laws and build criminal cases on the assumption that people will notice when something unusual happens right in front of them. We’re sure we know where we were on 9/11, falsely believing that vivid memories are seared into our minds with perfect fidelity. And as a society, we spend billions on devices to

train our brains because we're continually tempted by the lure of quick fixes and effortless self-improvement. The Invisible Gorilla reveals the myriad ways that our intuitions can deceive us, but it's much more than a catalog of human failings. Chabris and Simons explain why we succumb to these everyday illusions and what we can do to inoculate ourselves against their effects. Ultimately, the book provides a kind of x-ray vision into our own minds, making it possible to pierce the veil of illusions that clouds our thoughts and to think clearly for perhaps the first time.

Aristotle's neat compartmentalization notwithstanding (Poetics, ch. 9), historians and playwrights have both been laying claim to representations of the past – arguably since Antiquity, but certainly since the Renaissance. At a time when narratology challenges historiographers to differentiate their “emplotments” (White) from literary inventions, this thirteen-essay collection takes a fresh look at the production of historico-political knowledge in literature and the intricacies of reality and fiction. Written by experts who teach in Germany, Austria, Russia, and the United

States, the articles provide a thorough interpretation of early modern drama (with a view to classical times and the 19th century) as an ideological platform that is as open to royal self-fashioning and soteriology as it is to travesty and subverting the means and ends of historical interpretation. The comparative analysis of metapoetic and historiosophic aspects also sheds light on drama as a transnational phenomenon, demonstrating the importance of the cultural net that links the multifaceted textual examples from France, Russia, England, Italy, and the Netherlands.
