Mirroring the long-established structure of the financial industry, EU financial regulation as we know it today approaches banking, insurance and investment services separately and often divergently. In recent decades however, the clear separation between financial sectors has gradually evaporated, as business lines have converged across sectors and FinTech solutions have emerged which do not fit traditional sector boundaries. As the contours of the traditional tripartition in the financial industry have faded, the diverging regulatory and supervisory treatment of these sectors has become increasingly at odds with economic reality. This book brings together insights developed by distinguished researchers and industry professionals in a series of articles analysing the main areas of EU financial regulation from a cross-sectoral perspective. For each specific research theme – including prudential regulation, corporate governance and conduct of business rules – the similarities, as well as gaps, overlaps and unjustifiable differences between banking, securities and insurance regulation, are clearly presented and discussed. This innovative research approach is aimed at informing lawmakers and policymakers on potential improvements to EU financial regulation whilst also supporting legal and compliance professionals applying the current framework or looking to streamline compliance processes.

This comprehensive and insightful Handbook, takes a wider angle on central banks and central banking, focusing on the institutions of central banking. By 'institutions', Peter Conti-Brown and Rosa Lastra refer to the laws, traditions, norms, and rules used to structure central bank organisations. The objective of Off-Balance Sheet Activities is to gain insights into, and propose meaningful solutions to, those issues raised by the current proliferation of off-balance sheet transactions. The book has its origins in a New York University conference that focused on this topic. Jointly undertaken by the Vincent C. Ross Institute of

Accounting Research and New York University's Salomon Center for the study of Financial Institutions at the Stern School of Business, the conference brought together academic researchers and practitioners in the field of accounting and finance to address the issues with the broad-mindedness requisite of a group whose approaches to solutions are as different from each other as their respectively theoretical and applied approaches to the disciplines of finance and accounting. The essays are divided into two sections. The first covers issues surrounding OBS activities and banking and begins with a brief introduction that places the essays into context. OBS activities and the underinvestment problem, whether loan sales are really OBS, and money demand and OBS liquidity are examined in detail. Section two, which also begins with a brief introduction, focuses on issues of securitized assets and financing. A report on recognition and measurement issues in accounting for securitized assets is followed by three separate discussion essays. Other subjects covered include contract theoretic analysis of OBS financing, the use of OBS financing to circumvent financial covenant restrictions, and debt contracting and financial contracting. The latter two contributions are also followed by discussion essays. This unique collection of papers will prove to be an interesting and valuable tool for accounting and finance professionals as well as for academics involved in these fields. It will also be an important addition to public, college, and university libraries.

Financial Regulation: Law and Policy (2d Edition) introduces the field of financial regulation in a new and accessible way. Even though a decade has passed since the most systemic financial crisis in the last 70 years and eight years have elapsed since a major shift in regulatory design, the world is still grappling with the aftermath. In addition, technology innovations, including Bitcoin and other cryptocurrencies, market forces and a changing political environment all have combined to reframe and reorient public debate over financial regulation. The book has kept up to date with all of these changes. The book analyzes and compares the market and regulatory architecture of the entire U.S. financial sector as it exists today, from banks, insurance companies, and broker-dealers, to asset managers, complex financial conglomerates, and government-sponsored enterprises. The book explores a range of financial activities, from consumer finance and investment to payment systems, securitization, short-term wholesale funding, money markets, and derivatives. The book examines a range of regulatory techniques, including supervision, enforcement, and rule-writing, as well as crisis-fighting tools such as resolution and the lender of last resort. Throughout the book, the authors note the cross-border implications of U.S. rules, and compare, where appropriate, the U.S. financial regulatory framework and policy choices to those in other places around the globe, especially the European Union.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk.

Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalindex.
