The prevalence of cyber-dependent crimes and illegal activities that can only be performed using a computer, computer networks, or other forms of information communication technology has significantly increased during the last two decades in the USA and worldwide. As a result, cybersecurity scholars and practitioners have developed various tools and policies to reduce individuals' and organizations' risk of experiencing cyber-dependent crimes. However, although cybersecurity research and tools production efforts have increased substantially, very little attention has been devoted to identifying potential

comprehensive interventions that consider both human and technical aspects of the local ecology within which these crimes emerge and persist. Moreover, it appears that rigorous scientific assessments of these technologies and policies "in the wild" have been dismissed in the process of encouraging innovation and marketing. Consequently, governmental organizations, public, and private companies allocate a considerable portion of their operations budgets to protecting their computer and internet infrastructures without understanding the effectiveness of various tools and policies in reducing the myriad of risks they face. Unfortunately, this practice may complicate organizational workflows and increase costs for government entities, businesses, and consumers. The success of the

---

evidence-based approach in improving performance in a wide range of professions (for example, medicine, policing, and education) leads us to believe that an evidence-based cybersecurity approach is critical for improving cybersecurity efforts. This book seeks to explain the foundation of the evidence-based cybersecurity approach, review its relevance in the context of existing security tools and policies, and provide concrete examples of how adopting this approach could improve cybersecurity operations and guide policymakers' decision-making process. The evidence-based cybersecurity approach explained aims to support security professionals', policymakers', and individual computer users' decision-making regarding the deployment of security

policies and tools by calling for rigorous scientific investigations of the effectiveness of these policies and mechanisms in achieving their goals to protect critical assets. This book illustrates how this approach provides an ideal framework for conceptualizing an interdisciplinary problem like cybersecurity because it stresses moving beyond decision-makers' political, financial, social, and personal experience backgrounds when adopting cybersecurity tools and policies. This approach is also a model in which policy decisions are made based on scientific research findings.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and

the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the

underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at [www.worldbank.org/globalindex](http://www.worldbank.org/globalindex).

While the term benchmarking is commonplace nowadays in institutional research and higher education, less common, is a solid understanding of what it really means and how it has been, and can be, used effectively. This volume begins by defining benchmarking as “ a strategic and structured approach whereby an organization compares aspects of its processes and/or outcomes to those of another organization or set of organizations to identify opportunities for improvement. ” Building on this definition, the chapters provide a brief history of the evolution and emergence of benchmarking in general and in higher education in particular. The authors apply benchmarking to: Enrollment management and student success Institutional effectiveness The potential economic

impact of higher education institutions on their host communities. They look at the use of national external survey data in institutional benchmarking and selection of peer institutions, introduce multivariate statistical methodologies for guiding that selection, and consider a novel application of baseball sabermetric methods. The volume offers a solid starting point for those new to benchmarking in higher education and provides examples of current best practices and prospective new directions. This is the 156th volume of this Jossey-Bass series. Always timely and comprehensive, *New Directions for Institutional Research* provides planners and administrators in all types of academic institutions with guidelines in such areas as resource coordination, information analysis, program evaluation, and institutional management.

Institutional Research Initiatives in Higher Education IOS Press

This book explores how the financial system should be regulated and

structured to achieve the twin goals of inclusive growth and financial stability, with a focus on African low-income countries (LICs). The subject and content of this book is original in that it attempts to draw on the lessons and radical rethinking on the financial sector in developed and middle income countries, arising in the wake of the international financial crisis. It includes four in- depth country case studies, of Kenya, Ghana, Nigeria and Ethiopia, but also analyses the empirical evidence for Sub-Saharan Africa as a whole, evaluating the relevance (or not) of such major changes for the very different financial sectors and economies in low income countries. Achieving Financial Stability and

---

Growth in Africa has major academic and policy implications, especially for low income countries, but also more generally, on broader issues. These include the desirable size of the financial sector, as well as more specific issues, such as the high cost of borrowing of small and medium enterprises in LICs, and possible measures to reduce it. Highly topical subjects like the appropriate regulation of the financial sector and management of capital flows are discussed in depth. Though drawing on comprehensive reviews of the literature, this volume has the virtue of the large comparative academic and policy experience of researchers, as well as in-depth case studies, that take account of institutional and economic features of low- income countries. Written by senior academics and policy-makers, this book is a must read for those researching or participating in the financial sectors of low-income countries, as well as in developed economies. It is also suitable for those who study political economy and public finance.

## Risk Management in Financial Institutions CRC Press

Why is it critical for faculty development centers to reexamine their core mission today? The core argument of this book – that a necessary and significant role change is underway in faculty development – is a call for centers to merge the traditional responsibilities and services of the past several decades with a leadership role as organizational developers. Failing collectively to define and outline the dimensions and expertise of this new role puts centers at risk of not only marginalization, but of dissolution. When a TLC is busy and in demand, it is hard to believe that it may be, despite all the activity and

palpable array of daily outcomes, institutionally marginalized. The actual and increasing potential of marginalization and center closings may help motivate this field to recognize the danger of complacency or remaining stuck in an old paradigm that exclusively defines itself as instructional development or supportive service. Proposing a newly defined organizational development role for academic and faculty developers and directors of teaching and learning centers, *Coming in from the Margins* examines how significant involvement in broader institutional change initiatives is becoming a critical aspect of this work. Although undefined and unrecognized as a

---

significant dimension of this work, the organizational development role increasingly demanded of developers is far more attuned with the demand for change facing higher education than ever before. The book provides evidence-based research into what directors of centers are currently doing as organizational developers, and how they shape, influence, and plan institutional initiatives that intersect with teaching and learning. Directors of centers, their supervisors, and leaders in the field provide models, from a wide range of institutional contexts, as well as the strategies they have employed to successfully engage in significant organizational development. They also demonstrate how they handled the challenges that ensued. The strategies in each chapter provide a practical resource and guide for re-examining the mission and structure of existing centers, or for designing new centers of teaching and learning and, most importantly, to develop their role as change agents. The book covers such topics as: Center mission statements; Center staffing; Center advisory boards; committee involvement; unique expertise, knowledge and skills; embedding Centers in strategic planning; Center vision; organizational change processes; collaboration and partnerships; institutional priorities and initiatives; relationships with upper administration.
