Financial Regulation John Wiley & Sons

The United States has two separate banking systems today—one serving the well-to-do and another exploiting everyone else. How the Other Half Banks contributes to the growing conversation on American inequality by highlighting one of its prime causes: unequal credit. Mehrsa Baradaran examines how a significant portion of the population, deserted by banks, is forced to wander through a Wild West of payday lenders and check-cashing services to cover emergency expenses and pay for necessities—all thanks to deregulation that began in the 1970s and continues decades later. “ Baradaran argues

persuasively that the banking industry, fattened on public subsidies (including too-big-to-fail bailouts), owes low-income families a better deal...How the Other Half Banks is well researched and clearly written...The bankers who fully understand the system are heavily invested in it. Books like this are written for the rest of us. ” —Nancy Folbre, New York Times Book Review “ How the Other Half Banks tells an important story, one in which we have allowed the profit motives of banks to trump the public interest. ”

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140

economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay

of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalindex.

Financial Regulation: Law and Policy (2d Edition) introduces the field of financial regulation in a new and accessible way. Even though a decade has passed since the most systemic financial crisis in the last 70 years and eight years have elapsed since a major shift in regulatory design, the world is still grappling with the aftermath. In addition, technology innovations, including Bitcoin and other cryptocurrencies, market forces and a changing political environment all have combined to reframe and reorient public debate over financial regulation. The book has kept up to date with all of these changes. The book analyzes and compares the market and regulatory

architecture of the entire U.S. financial sector as it exists today, from banks, insurance companies, and broker-dealers, to asset managers, complex financial conglomerates, and government-sponsored enterprises. The book explores a range of financial activities, from consumer finance and investment to payment systems, securitization, short-term wholesale funding, money markets, and derivatives. The book examines a range of regulatory techniques, including supervision, enforcement, and rule-writing, as well as crisis-fighting tools such as resolution and the lender of last resort. Throughout the book, the authors note the cross-border implications of U.S. rules, and compare, where appropriate, the U.S. financial regulatory framework and policy choices to those in other places around the globe, especially the European

Union.

The objective of Off-Balance Sheet Activities is to gain insights into, and propose meaningful solutions to, those issues raised by the current proliferation of off-balance sheet transactions. The book has its origins in a New York University conference that focused on this topic. Jointly undertaken by the Vincent C. Ross Institute of Accounting Research and New York University's Salomon Center for the study of Financial Institutions at the Stern School of Business, the conference brought together academic researchers and practitioners in the field of accounting and finance to address the issues with the

broad-mindedness requisite of a group whose approaches to solutions are as different from each other as their respectively theoretical and applied approaches to the disciplines of finance and accounting. The essays are divided into two sections. The first covers issues surrounding OBS activities and banking and begins with a brief introduction that places the essays into context. OBS activities and the underinvestment problem, whether loan sales are really OBS, and money demand and OBS liquidity are examined in detail. Section two, which also begins with a brief introduction, focuses on issues of securitized assets and financing. A report on recognition and measurement issues in accounting for securitized assets is followed by three separate discussion essays. Other subjects covered include contract

theoretic analysis of OBS financing, the use of OBS financing to circumvent financial covenant restrictions, and debt contracting and financial contracting. The latter two contributions are also followed by discussion essays. This unique collection of papers will prove to be an interesting and valuable tool for accounting and finance professionals as well as for academics involved in these fields. It will also be an important addition to public, college, and university libraries. In Chapter 5, William Shughart also considers the part that politics played in banking legislation during the 1930s, but he looks at the banking legislation passed in the United States. Shughart draws particular attention to the provisions in the Banking Act of 1933 that required the separation of commercial and investment banking activities. Applying a public choice analysis, Shughart asks who gained from the provisions, and he concludes that the commercial banking industry, the investment banking industry, and the U. S. Treasury Department can all be said to have benefited in the years immediately following the passage of the act. Richard Timberlake, in his comment, extends Shughart's analysis to show how the federal government manipulated the monetary policy of the 1930s for its own benefit. The history of the regulation of

the savings and loan industry is the subject of Chapter 6. James Barth and Martin Regalia examine the way in which regulation of the industry has evolved since the first savings and loan was established in the 1830s. They conclude that the stated purpose of regulation appears to have changed, even while the regulations themselves often have not. Barth and Regalia provide some important insights into the contribution of thrift regulation to the current problems facing the industry as well as some suggestions about the direction reform should and should not take.

In response to a clear need by low-income people to gain access to the full range of financial services including savings, a growing number of microfinance NGOs are seeking guidelines to transform from credit-focused microfinance organizations to regulated deposit-taking financial intermediaries. In response to this trend, this book presents a practical 'how-to' manual for MFIs to develop the capacity to become licensed and regulated to mobilize deposits from the public. 'Transforming Microfinance Institutions' provides guidelines for regulators to license and regulate microfinance providers, and for transforming MFIs to meet the demands of two major new stakeholders regulators and shareholders. As such, it focuses on developing the capacity of NGO MFIs to mobilize and intermediate voluntary

savings. Drawing from worldwide experience, it outlines how to manage the transformation process and address major strategic and operational issues inherent in transformation including competitive positioning, business planning, accessing capital and shareholders, and how to 'transform' the MFI's human resources, financial management, MIS, internal controls, and branch operations. Case studies then provide examples of developing a new regulatory tier for microfinance, and how a Ugandan NGO transformed to become a licensed financial intermediary. This book will be invaluable to regulators and microfinance NGOs contemplating institutional transformation and will be of tremendous use to donors and technical support agencies supporting MFIs in their transformation.
