In the late 1990s, international statistical experts confirmed that financial derivatives should be treated as financial assets and that transactions in financial derivatives should be reported as separate transactions rather than as integral parts of the values of underlying transactions or of financial assets to which some derivatives are linked as hedges. Therefore, to parallel revisions made to the System of National Accounts (1993), an addendum and amendments to the fifth edition (1993) of the Balance of Payments Manual (BPM5) were prepared and published, in early 2000, as a supplement entitled Financial Derivatives. This supplement comprises two parts. Part I contains a new chapter in which the features of financial derivatives and treatments appropriate for specific derivatives were described. Part II consists of modifications to those portions of the BPM5 that pertain to financial derivatives. The revisions are shown by means of shading and strikeout. Financial Derivatives is an essential component of the BPM5.

In preparing Part III., which treats of Greek roots and derivatives, it has been the aim of the author to remove those obstacles which long experience in teaching has shown to exist. Each division of the subject ends with a Review. The Key Is a valuable feature of the work. It analyzes every word about which a doubt could arise, and gives not only the prefix and root, but also that most difficult part, the suffix.
