Financial derivatives are financial instruments that derive their value from underlying assets such as stocks, bonds, commodities and currencies. Financial market for trading derivatives is known as derivatives market. There are four major types of financial derivatives including futures, options, forwards and swaps. Hedgers and speculators use derivative products to take advantage of the market fluctuations. Derivatives are used primarily for one of two purposes, namely, mitigating risk (hedging) or assuming risk in expectation of commensurate reward (speculation). Investors choose financial derivatives to deal with market volatility, take advantage of arbitrage opportunities, and to access different markets and assets. This account of the sophisticated financial hub that was 17th-century Amsterdam "does a fine job of bringing history to life" (Library Journal). The launch of the Dutch East India Company in 1602 initiated Amsterdam's transformation from a regional market town into a dominant financial center. The Company introduced easily transferable shares, and within days buyers had begun to trade them. Soon the public was engaging in a variety of complex transactions, including forwards, futures, options, and bear raids, and by 1680 the techniques deployed in the Amsterdam market were as sophisticated as any we practice today. Lodewijk Petram's award-winning history demystifies financial instruments by linking today's products to yesterday's innovations, tying the market's operation to the behavior of individuals and the workings of the world around them. Traveling back in time, Petram visits the harbor and other places where merchants met to strike deals. He bears witness to the goings-on at a notary's office and sits in on the consequential proceedings of a courtroom. He describes in detail the main players, investors, shady characters, speculators, and domestic servants and other ordinary folk, who all played a role in the development of the market and its crises. His history clarifies concerns that investors still struggle with today—such as fraud, the value of information, trust and the place of honor, managing diverging expectations, and balancing risk—and does so in a way that is vivid, relatable, and critical to understanding our contemporary world.
