The Only Golf Lesson You'll Ever Need, Hank Haney, one of the most respected and soughtafter golf instructors in the world, shares the secrets he's learned by observing hundreds of thousands of students--from top PGA Tour pros to high-handicappers. He explains how intelligent observation of your ball-flight tendencies--the way your shot behaves in the air--provides the answers to helping you develop a consistent repeating swing that will lower your scores. You'll also pick up valuable pointers on how to precisely match your equipment to your game. Hank Haney believes that a "flawed swing" that still produces a good shot is a good swing. By focusing on the outcome of your swing first, rather than on the swing itself, he believes you can often avoid making the awkward and unnatural changes to grip, stance, posture and alignment that many golf instructors ask of their students.

The Only Golf Lesson You'll Ever Need will help you straighten your hook or slice, add distance to your drives, identify and fix the flaws in your swing, and become a wizard around the greens. "I'm proud of the way my swing holds up ion all kinds of conditions and under the severest pressure. Both are a tribute to Hank Haney and his teaching.

Hank knows more about ballflight and what controls it than anyone in the game. And if you understand that, you're on your way." --

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one

of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

This second edition is an in-depth illustrated manual by Master Plumber Bob Scott that continues to examine various venting methods and includes discussion and application of venting

methods in the International Plumbing Code(R) (IPC(R)) and International Residential Code(R) (IRC(R)). This heavily illustrated guide shows correct and incorrect examples of common venting, horizontal and vertical wet-venting, combination waste and vent, circuit venting, single stack venting and more based on the criteria established in chapter 9 of the 2021 IPC and Chapter 31 of the 2021 IRC, as well as the 2015 and 2018 editions of the IPC and IRC. It discusses the nuances of each method in detail and gives many examples of how and where to use each method. A must have guide for any designer, installer, plan examiner, inspector or plumbing professional.

Germany's economic miracle is a widely-known phenomenon, and the

world-leading, innovative products and services associated with German companies are something that others seek to imitate. In The 'Made in Germany' Champion Brands, Ugesh A. Joseph provides an extensively researched, insightful look at over 200 of Germany's best brands to see what they stand for, what has made them what they are today, and what might be transferable. The way Germany is branded as a nation carries across into the branding of its companies and services, particularly the global superstar brands - truly world-class in size, performance and reputation. Just as important are the medium-sized and small enterprises, known as the 'Mittelstand'. These innovative and successful enterprises from a wide range of industries and product / service categories are amongst the World market leaders in their own niche and play a huge part in making Germany what it is today. The book also focuses on German industrial entrepreneurship and a selection of innovative and emergent stars. All these companies are supported and encouraged by a sophisticated infrastructure of facilitators, influencers and enhancers - the research, industry, trade and standards organizations, the fairs and exhibitions and all the social and cultural factors that influence, enhance and add positive value to the country's image. Professionals or academics interested in business; entrepreneurship; branding and marketing; product or service development; international trade and business development policy, will find fascinating insights in this book; while those with an interest in Germany from emerging industrial economies will

learn something of the secrets of German success.

An award-winning scientist offers his unorthodox approach to childrearing:

“ Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions ” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you ’ re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a

family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley ’ s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You ’ ll be laughing and learning at the same time.
