In the face of  
widespread fear and  
apathy, an  
international  
coalition of  
researchers,  
professionals, and  
scientists have come  
together to offer a  
set of realistic and  
bold solutions to  
climate change. One  
hundred techniques  
and practices are  
described here-some  
are well known; some  
you may have never  
heard of. They range  
from clean energy to  
educating girls in  
lower-income  
countries to land use  
practices that pull  
carbon out of the

air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

The contributions to this volume cover all aspects of the assessment

and management of hepatobiliary disease. The focal points of the book consist of three state-of-the-art summaries. The first of these deals with the highly topical problem of liver transplants from the point of view of patient selection. The second considers drug-induced liver injury in view of the fact that the liver is the main metabolic site for a number of drugs. The final summary deals with liver and aging: it asks whether the liver follows the aging process of the host organisms and whether the liver of aged liver transplant candidate donors could be suitable for grafting. Aside from these topics, the volume presents basic research on hepatic transport mechanisms, intrahepatic cholestasis and gall-stone disease, which serves as a background for the topics more specifically concerning the assessment of liver function. Much of the book is then devoted to the management of the commonest forms of liver diseases and their complications, such as chronic active hepatitis, liver cirrhosis, portal hypertension, hepatic encephalopathy, hepatorenal syndrome, and ascites. As you can see, this "molecular formula is not very informative, it tells us little or nothing about their structure, and suggests that all proteins are similar, which is confusing since they carry out so many different roles.

Individuals and enterprises are looking for

optimal solutions for the problems they face. Most problems can be expressed in mathematical terms, and so the methods of optimization render a significant aid. This book details the latest achievements in optimization. It offers comprehensive coverage on Differential Evolution, presenting revolutionary ideas in population-based optimization and shows the best known metaheuristics through the prism of Differential Evolution.

One of the great thinkers of our century, von Neumann initiated major branches of mathematics--from operator algebras to game theory to scientific computing--and had a fundamental impact on such areas as self-adjoint operators, ergodic theory and the foundations of quantum mechanics, and numerical analysis and the design of the modern computer. This volume contains the proceedings of an AMS Symposium in Pure Mathematics, held at Hofstra University, in May 1988. The symposium brought together some of the foremost researchers in the wide range of areas in which von Neumann worked. These articles illustrate the sweep of von Neumann's ideas and thinking and document their influence on contemporary mathematics. In addition, some of those who knew von Neumann when he was alive have presented here personal reminiscences about him. This book is directed to those

---

interested in operator theory, game theory, ergodic theory, and scientific computing, as well as to historians of mathematics and others having an interest in the contemporary history of the mathematical sciences. This book will give readers an appreciation for the workings of the mind of one of the mathematical giants of our time.
