For standard fume hoods,
design to provide 100 feet per
minute (fpm) linear air
velocity into hood face
(acceptable working range =

80 - 120 fpm, with sash height of 18" – not full open). Non-occupancy setpoints to 80fpm if applicable. For high performance fume hoods, design to 80 fpm +/- 20%. Non-occupancy setpoints to 60fpm if applicable.

Design Guidelines - UMass Amherst
Site Considerations Garden centers, retail greenhouses and farm stands are a popular way of marketing plants. Most operate year-round but some are open only on a seasonal basis, limiting sales to the spring bedding plant season and major holidays. In recent years, most of the major chain stores have installed garden centers to market to their large customer base.
