Cold weather can be a potential hazard to human health, adversely affecting physiological functions, work

performance and wellbeing. Designing suitable apparel for cold environments is therefore a complex task. Textiles for cold weather apparel reviews the principles, materials and requirements of cold weather apparel and will stimulate ideas for future innovation and improved end performance. The first part of the book covers the fundamental scientific issues and types of materials suitable for cold weather clothing. Topics include how to achieve comfort and thermoregulation in cold weather

clothing as well as the use of coated and laminated fabrics. It also discusses design and ergonomic aspects such as designing for ventilation. Part two discusses ways of evaluating cold weather clothing, including standards and legislation governing cold weather clothing and laboratory assessments. Part three concludes with applications including cold weather apparel for the military and footwear for cold weather conditions. With an array of international contributors, this book is a valuable reference for

producers, manufacturers, retailers and all those wishing to improve and understand developments in cold weather apparel. Reviews the principles, materials and requirements of cold weather apparel Discusses design and ergonomic aspects including ventilation and insulation Examines methods used to evaluate cold weather clothing as well as standards and legislation in practice

For a number of years, the healthy and environment-friendly building material earth, in common use for thousands of years, has been enjoying increasing popularity,

including in industrialized nations. In hot dry and temperate climate zones, earth offers numerous advantages over other materials. Its particular texture and composition also holds great aesthetic appeal.

The second and revised edition of this handbook offers a practical systematic overview of the many uses of earth and techniques for processing it. Its properties and physical characteristics are described in informed and knowledgeable detail. The

author's presentation reflects the rich and varied experiences gained over thirty years of building earth structures all over the world.

Numerous photographs of construction sites and drawings show the concrete execution of earth architecture.

"Due to the many problems that need to be solved to optimize food texture, the

design and optimization of food texture is an ongoing challenge for the food industry. This unique 2-volume resource offers practical solutions to the complex and varied problems encountered in designing, measuring and optimizing food texture. The first volume presents insightful case studies on formulating products from a broad variety of food segments, such as cheese, soups, chocolate, cookies, brownies, bread, gluten-free products, low-fat/non-fat dairy

products and more. The second volume provides an overview of the latest advances in food texture design and optimization"-- *Design and Technology of a Sustainable Architecture* "O'Reilly Media, Inc." Object-Oriented Analysis and Design for Information Systems clearly explains real object-oriented programming in practice. Expert author Raul Sidnei Wazlawick explains concepts such as object responsibility, visibility and the real need for

delegation in detail. The object-oriented code generated by using these concepts in a systematic way is concise, organized and reusable. The patterns and solutions presented in this book are based in research and industrial applications. You will come away with clarity regarding processes and use cases and a clear understand of how to expand a use case. Wazlawick clearly explains clearly how to build meaningful sequence diagrams. Object-

Oriented Analysis and Design for Information Systems illustrates how and why building a class model is not just placing classes into a diagram. You will learn the necessary organizational patterns so that your software architecture will be maintainable. Learn how to build better class models, which are more maintainable and understandable. Write use cases in a more efficient and standardized way, using more effective and less complex diagrams. Build true object-

oriented code with division of responsibility and delegation.

Object-Oriented Analysis and Design for Information Systems

To determine optimal cloud-seeding techniques and optimal design specifications for a dry-ice seeding machine (the Cloudbuster), multiple strip seeding of stratiform decks was performed during which seeding rate, pellet size, and strip orientation with respect to wind were systematically changed from

strip to strip. Concurrently, the physical properties of the cloud decks were measured and cloud response (i. e., hole size, growth rate, etc.) to the varying treatments was measured photogrammetrically. Results showed that both the dry ice seeding rate and pellet size, as well as the cloud temperature, exerted a strong influence on cloud response. Seeding rate had an optimum of 8-9 lb/naut. mile of CO₂ pellets whereafter additional quantities no longer influenced the experiment

predictably. Generally, clouds failed to respond to treatment at 1.8 lb/naut. mile. A minimum recommended quantity of CO2 pellets is 4 lb/naut. mile using a 1 x 1 x 1 cm pellet of 0.5 g/cc density. This CO2 pellet has a fall distance of 1200 ft. When combined with other machine functions, this seeding rate and pellet size allow an output of 10,500 pellets/naut. mile. Cloud response approximately doubles between -5 C and -11 C. A response failure point exists between -3 C and

-4 C. Strips should be seeded about 40 min worth of drift upwind of the desired location, and should be seeded across the wind. Seeding altitude for the aircraft should be coincident with the top of the deck for all but thickest decks (> 1200 ft). (Author).

The Reader

IDEO founder and Stanford d.school creator David Kelley and his brother Tom Kelley, IDEO partner and the author of the bestselling *The Art of Innovation*, have written a powerful and compelling book on unleashing the creativity that lies within each and every one of us. Too often, companies and individuals assume that creativity and innovation are the domain of the "creative types." But two of the leading experts in

innovation, design, and creativity on the planet show us that each and every one of us is creative. In an incredibly entertaining and inspiring narrative that draws on countless stories from their work at IDEO, the Stanford d.school, and with many of the world's top companies, David and Tom Kelley identify the principles and strategies that will allow us to tap into our creative potential in our work lives, and in our personal lives, and allow us to innovate in terms of how we approach and solve problems. It is a book that will help each of us be more productive and successful in our lives and in our

careers. Cycle World Magazine Log Home Design is the preferred, trusted partner with readers in simplifying the process of becoming a log home owner. The Big Book of Conflict Resolution Games: Quick, Effective

Activities to Improve Communication, Trust and Collaboration

This book is a one-stop resource on all the critical aspects of planning and designing hospitals, one of the most complex healthcare projects to undertake. A well-planned and designed hospital should control infection rate, provide safety to patients, caregivers and visitors, help improve patients' recovery and have scope for future expansion and change. Reinforcing these

basic principles, guidance on such effective planning and designing is the key focus. Readers are offered insights into eliminating shortcomings at every stage of setting up a hospital which may not be feasible to rectify later on through alterations. Chapters from 1 to 12 of the book provide exhaustive notes on initial planning, such as detailed project reports, feasibility studies, and area calculation. Chapters 13 to 27 include designing and layout of all the essential departments/units

such as OPD, emergency, intermediate care, diagnostics, operating rooms, and intensive care units. Chapters 28 to 37 cover designing support services like sterilization department, pharmacy, medical gas pipeline, kitchen, laundry, medical record, and mortuary. Chapters 38 to 48 take the readers through planning other services like air-conditioning and ventilation, fire safety, extra low voltage, mechanical, electrical, and plumbing services. Chapter 49 is for

the planning of medical equipment. A particular chapter on "Green" hospital designing is included. This book is a single essential tabletop reference for hospital consultants, medical and hospital administrators, hospital designers, architecture students, and hospital promoters. *Pre-design Backpacker* brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often.
