This is the resource that engineers turn to in the study of radiation detection. The fourth edition takes into account the technical developments that continue to enhance the instruments and techniques

available for the detection and spectroscopy of ionizing radiation. New coverage is presented on ROC curves, micropattern gas detectors, new sensors for scintillation light, and the excess noise factor. Revised discussions are also included on TLDs and cryogenic spectrometers, radiation backgrounds, and the VME standard. Engineers will gain a strong understanding of the field with this updated book.

Montreal's Expo 67 Springer

In 1967, Canada celebrated the 100th anniversary of its founding with a spectacular party, and the whole world was invited. Montreal's Expo 67 was the first world's fair held in Canada, and it was a huge success, attracting over 50 million visitors. The 1,000-acre site was built on two man-made islands in the St. Lawrence River and incorporated 90 futuristic pavilions created by some of the world's greatest architects and designers. Over 60 countries were represented, along with many private, corporate and thematic pavilions, all brought together under the theme "Man and his World." With performers and entertainers of all varieties, restaurants, cultural attractions, exhibitions and a world-class amusement park, Expo 67 was literally the party of the century, exceeding all expectations.

This book explains the financial appraisal of capital budgeting projects. The coverage extends from the development of basic concepts, principles and techniques to the application of them in increasingly complex and real-world situations.

Identification and estimation (including forecasting) of cash flows, project appraisal formulae, and the application of net present value (NPV), internal rate of return (IRR) and other project evaluation criteria are illustrated with a variety of calculation examples. Risk analysis is extensively covered by the use of risk adjusted discount

rate, certainty equivalent, sensitivity, simulation and Monte Carlo analysis. The NPV and IRR models are further applied to forestry, property and international investments. Resource constraints are introduced to the capital budgeting decisions with a variety of worked examples using linear programming technique. All calculations are extensively supported by Excel workbooks on the Web, and each chapter is well reviewed by end of chapter questions.

4th EAI International Conference on Management of Manufacturing Systems

Harvest House Publishers

Throughout the 19th century animals were integrated into staged scenarios of confrontation, ranging from lion acts in small cages to large-scale re-enactments of war. Initially presenting a handful of exotic animals, travelling menageries grew to contain multiple species in their thousands. These 19th-century menageries entrenched

beliefs about the human right to exploit nature through war-like practices against other animal species. Animal shows became a stimulus for antisocial behaviour as locals taunted animals, caused fights, and even turned into violent mobs. Human societal problems were difficult to separate from issues of cruelty to animals. Apart from reflecting human capacity for fighting and aggression, and the belief in human dominance over nature, these animal performances also echoed cultural fascination with conflict, war and colonial expansion, as the grand spectacles of imperial power reinforced state authority and enhanced public displays of nationhood and nationalistic evocations of colonial empires. Fighting nature is an insightful analysis of the historical legacy of 19th-century colonialism, war, animal acquisition and transportation. This legacy of entrenched beliefs about the human right to exploit other animal species is yet to be defeated. "Peta Tait brings to the book an impressive scholarly command of the documentary material, from which she draws a range of vivid examples and revealing analyses of human–animal

confrontation in popular entertainments ... The book is written with verve and clarity, and will be of interest to a wide readership in performance studies and cultural history." Professor Jane R. Solutions Manual to Accompany Quantum Chemistry South-Western College Michael Gurian, whose national bestseller *The Wonder of Boys* presented a radical and enlightening view of parenting sons, now offers a groundbreaking approach to raising daughters. In *The Wonder of Girls*, Gurian, himself the father of two girls, provides crucial information for fully understanding the basic nature of girls: up-to-date scientific research on female biology, hormones, and brain development and how they shape girls' interests, behavior, and relationships. He also offers insight into a culture mired in competition between traditionalism and feminism and a new vision that provides for the equal status of girls and women yet acknowledges their nature as complex and distinct from men. He explains what is "normal" for girls each year from birth to age 20; what developmental needs girls face in each stage; how to communicate effectively with girls; and how to cope with developmental crises such as early sexuality, eating disorders, parental divorce, and more. With personal insights, practical tips, real-life anecdotes, and

accessible science, *The Wonder of Girls* creates a new parenting paradigm. Key elements include: a nature-based approach to why girls are the way they are the connection between the need for profound attachment and the physical and brain development of girls support for a girl's inherent need for intimacy tools to protect girls' self-esteem and emotional life a new approach to girls' character development and rites of passage. With this scientifically based developmental map of girlhood, Gurian equips parents with a comprehensive guide for raising daughters. Challenging our culture to examine and embrace a crucial piece of the puzzle missing thus far, *The Wonder of Girls* elevates the dialogue on parenthood.

In an exhibition shown from 20 January to 27 May 1996, the Kunsthalle Tübingen presented a thoughtfully prepared selection of many of Renoir's most important paintings from his more than five decades of creative life. The first comprehensive, scholarly retrospective ever devoted to the artist in Germany and presented only in Tübingen, the exhibition offered a view of a significant cross-section of the painter's complete oeuvre. Each of the works exhibited is illustrated in this volume in a full-page plate. Paintings representing the full spectrum of Renoir's themes and including some of the most noteworthy works in major international collections and museums in such cities as Washington, D.C., New York, Philadelphia, Sao Paulo, Stockholm, Madrid, London, Paris, St. Petersburg, Zurich, Tokyo, Hiroshima and Berlin - all were provided on loan for the exhibition - provide enlightening insights into the work of this artistic genius.

Responding to the expansion of scientific knowledge about the roles of nutrients in human health, the Institute of Medicine has developed a

new approach to establish Recommended Dietary Allowances (RDAs) and other nutrient reference values. The new title for these values Dietary Reference Intakes (DRIs), is the inclusive name being given to this new approach. These are quantitative estimates of nutrient intakes applicable to healthy individuals in the United States and Canada. This new book is part of a series of books presenting dietary reference values for the intakes of nutrients. It establishes recommendations for energy, carbohydrate, fiber, fat, fatty acids, cholesterol, protein, and amino acids. This book presents new approaches and findings which include the following: The establishment of Estimated Energy Requirements at four levels of energy expenditure Recommendations for levels of physical activity to decrease risk of chronic disease The establishment of RDAs for dietary carbohydrate and protein The development of the definitions of Dietary Fiber, Functional Fiber, and Total Fiber The establishment of Adequate Intakes (AI) for Total Fiber The establishment of AIs for linolenic and α -linolenic acids Acceptable Macronutrient Distribution Ranges as a percent of energy intake for fat, carbohydrate, linolenic and α -linolenic acids, and protein Research recommendations for information needed to advance understanding of macronutrient requirements and the adverse effects associated with intake of higher amounts Also detailed are recommendations for both physical activity and energy expenditure to maintain health and decrease the risk of disease.

This volume consists of selected essays by participants of the workshop Control at Large Scales: Energy Markets and Responsive Grids held at the Institute for Mathematics and its Applications, Minneapolis, Minnesota, U.S.A. from May 9-13, 2016. The workshop brought together a diverse group of experts to discuss current and future challenges in energy markets and controls, along with potential solutions. The volume includes chapters on significant challenges in the design of markets and incentives, integration of renewable energy and energy storage, risk management and resilience, and distributed and multi-scale optimization and control. Contributors include leading experts from academia and industry in power systems and markets as well as control science and engineering. This volume will be of use to experts and newcomers interested in all aspects of the challenges facing the creation of a more sustainable electricity infrastructure, in areas such as distributed and stochastic optimization and control, stability theory, economics, policy, and financial mathematics, as well as in all

aspects of power system operation.
