This reference develops the fundamental concepts of compressible fluid flow by clearly illustrating their applications in real-world practice through the use of numerous worked-out examples and problems. The book covers concepts of thermodynamics and fluid mechanics which relate directly to compressible flow; discusses isentropic flow through a variable-area duct; describes normal shock waves, including moving shock waves and shock-tube analysis; explores the effects of friction and heat interaction on the flow of a compressible fluid; covers two-dimensional shock and expansion waves; provides a treatment of linearized flow; discusses unsteady wave propagation and computational methods in fluid dynamics; provides several numerical methods for solving linear and nonlinear equations encountered in compressible flow; offers modern computational methods for solving nonintegrable equations; and describes methods of measurement in high-speed flow. Suitable for the practicing engineer engaged in compressible-flow applications.

Repositioning Shakespeare offers an original assessment of a broad range of texts and cultural events that appropriate Shakespeare. Examining these materials within the context of 'the nation' in a postcolonial era, Thomas Cartelli considers: * essays by Walt Whitman * the nineteenth-century play, 'Jack Cade' * novels by Aphra Behn, Ngugi Wa Thiong'o, Michelle Cliff, Tayeb Salih, Nadine Gordimer and Robert Stone * the 1849 Astor Place Riot Cartelli places particular emphasis on redefining the 'postcolonial' in order to find a place for America. In doing so, Repositioning Shakespeare makes a considerable contribution to the continuing debate about the uses we make of Shakespeare.
