It all started in the 1970s when my own children were on the threshold of adulthood. The Roving Roo adventures were created around 1989 after a trip to the USA, where my daughter introduced me to a mascot named Kirby Kangaroo. Swaggy Joe became the romantic character of my childhood—when itinerant workers still walked the roads. I have fond memories of some of them, notably an old timer of Bacchus Marsh, Victoria, named Brian Rice, who my Grandma Lyle employed in exchange for food and rudimentary accommodation in the back shed. Another was a chap named Ruben Webb, who my dad gave

work to at our home. He worked well and then wandered his way. Great icons of honesty, integrity, and the freedom to live as they would were both of these men and others of their ilk. I recognize that the normal way of life for me as a child has slipped by as prosperity and technology altered what my grandchildren know as their way of life. I felt that it could assist the new generations if they could be given some insights into life as it once was before their time, albeit in romantic tales of the imagination. For me to express this, I found the lyric ballad came naturally to be the utility of sharing. Although untrained as a writer and communicator, the urge to share a little of “ what was ” or “ maybe was ” prompted this little booklet. I hope that the readers, those young and those not so, enjoy the unique sharing reading provides.

Valve train systems control the gas exchange in a combustion engine, which means that they represent a significant opportunity for optimizing the combustion process. Since they draw energy from the crankshaft, an efficient valve train contributes greatly to improving overall efficiency. The components of the valve train system are subjected to high loads. In addition to wear due to mechanical forces increasing combustion pressures and temperatures, in particular, place greater demands on the materials and heat dissipation of components on the combustion side. With new ideas stemming from the latest academic research, this study presents a reappraisal of the development of tanks and their evolution during World War I and how the surge in technological development during World War II and the subsequent Cold War drove developments in armour in Europe and America, transforming tanks into fast, resilient and powerful fighting machines. From the primitive, bizarre-looking Mark V to the Matilda and from the menacing King Tiger to the superlative M1 Abrams, Professor Ogorkiewicz shows how tanks gradually acquired the enhanced capabilities that enabled them to become what they are today – the core of combined-arms, mechanized warfare.
