Today ' s academic environment presents assessment challenges defined by an increased volume of available information coupled with increased competition among students and time constraints. Multiple choice questions (MCQs) provide examiners with an opportunity to assess academic performance on the basis of instant recollection of correct answers in a minimal amount of time. MCQs Series for Life Sciences Volume 1 is a collection of MCQs on advanced topics and offers the following benefits for readers: Includes over 2600 relevant MCQs Covers five advanced subjects including biochemistry, cell biology, developmental biology, genetics & molecular biology and immunology. Simplified language and presentation of concepts Answers to each question are provided This MCQs eBook series in life sciences is, therefore, a handy reference for graduate and postgraduate students undertaking examinations or entrance tests as well as teachers or examiners involved in setting and controlling assessments in specific subjects in life sciences.

A goal of mine ever since becoming an educational researcher has been to help construct a sound theory to guide instructional practice. For far too long, educational practice has suffered because we have lacked firm instructional guidelines, which in my view should be based on sound psychological theory, which in turn should be based on sound neurological theory. In other words, teachers need to know how to teach and that "how-to-teach" should be based solidly on how people learn and how their brains function. As you will see in this book, my answer to the question of how people learn is that we all learn by spontaneously generating and testing ideas. Idea generating involves analogies and testing requires comparing predicted consequences with actual consequences. We learn this way because the brain is essentially an idea generating and testing machine. But there is more to it than this. The very process of generating and testing ideas results not only in the construction of ideas that work (i. e. , the learning of useful declarative knowledge), but also in improved skill in learning (i. e. , the development of improved procedural knowledge).

Signaling Pathways in Liver Diseases, Third Edition again provides hepatologists and hepatology researchers with an expert overview of the complex and novel cellular/extracellular signaling pathways in the liver, and their role in liver diseases. The last few years have seen a great number of developments in this field, which in turn have led to new opportunities for innovative treatments; however, the intricacy of these pathways and their interactions continue to provide a real challenge for clinicians. This outstanding book compiles the emerging knowledge into a single expert resource, cataloguing and organizing it into an accessible and understandable format. With increased focus on the comprehension of cellular mechanisms involved in steatohepatitis, cirrhosis, and liver tumors, which has led to changes in the management of these diseases, this new edition also sees the introduction of exciting new chapters on key emerging areas such as: Autophagy Notch Pathway P13K/PTEN Signaling in Liver Diseases Sirtuins Hepcidin and Iron Epigenetic Regulation of Hepatic Stellate Cells and Liver Fibrosis Oxidative Stress and Signaling in the Liver. Professors Dufour and Clavien have assembled an all-star cast of chapter authors, each of whom has provided clear and appropriate illustrations to reinforce the text, with a key points box offering a concise and handy summary. Self-assessment questions and answers allow the reader to test their own knowledge. Signaling Pathways in Liver Disease, Third Edition is the perfect educational and reference tool to bridge the information exchange between the laboratory, the clinical

ward, and the operating room, and an essential tool for the modern-day hepatologist.

Landmark text focusing on the development of brain and behavior during infancy, childhood, and adolescence Developmental Cognitive Neuroscience provides an accessible introduction to the main methods, theories, and empirical findings of developmental cognitive neuroscience. The focus is on human development from in utero to early adulthood, but key comparative work is also included. This new edition covers research in clinical/medical populations, educational applications and major advancements in methods and analysis, in particular with increasing longitudinal research focusing on understanding the mechanisms of cognitive development. It also contains a new chapter on global and cross-cultural perspectives outlining how developmental cognitive neuroscience has been applied in different settings and how techniques can be successfully adapted. The text features a variety of student-friendly features such as chapter-end discussion, applications of basic research, and introductions to key experimental methods. An accompanying related resource website for students and educators that includes a test bank of multiple choice questions is also provided. Other sample topics covered in Developmental Cognitive Neuroscience include: Biology of change, methods, and populations, from gene to brain, building a brain, and vision, orienting, and attention Perceiving and acting in a world of objects, learning, and long-term memory, language, and prefrontal cortex, working memory, and decision-making Perceiving and acting in the social world, educational neuroscience, interactive specialization, and integrating development cognitive neuroscience Mid-childhood and adolescent development, social cognition and neuroimaging, and broader cognitive neuroscience approaches and theory With expansive yet accessible coverage of the subject, Developmental Cognitive Neuroscience is an ideal resource for upper level undergraduate and early postgraduate readers. The text will further appeal to professionals in fields that have adopted developmental cognitive neuroscience approaches, such as education, clinical psychology, pediatric medicine and global health.

Basic Genetics is a concise introductory textbook that focuses not only on understanding and explaining the main points of genetics, but also upon covering the required essential traditional subjects in the field. The main goal of this textbook is to help first year students who are taking their first course in human genetics to understand the different topics within genetics. It is of particular interest for those who are preparing themselves to study medicine or other medical sciences. This textbook presents only the essential required information. Some of the different subjects included in the eight chapters are: cell cycle and cellular division, Mendelian principles of heredity, the molecular basis of genetic material, gene expression and gene expression control, genetic variations and genetic engineering, as well as human genetics. In addition, Basic Genetics contains multiple choice questions covering each topic and their answers. These questions are absolutely essential for students' self-assessment. These different topics of basic genetics have also been illustrated by simple diagrams in full color.

The new edition of Gene Control, for the first time, provides extensive coverage on prokaryotic gene regulation, which makes it the only textbook offering a complete and detailed account of gene control for both prokaryotic and eukaryotic organisms. The core objective of this edition is to educate students about the fundamental principles and mechanisms governing gene expression, regulation, and function. To reinforce these ideas, each chapter now includes discussion questions to promote critical thinking. There are also multiple choice questions and animations for students, and a large question bank and figure slides for instructors. The textbook also emphasizes the vital role of scientific experiments and evidence in shaping our current understanding of gene control and provides comprehensive coverage of essential gene expression techniques and methodologies throughout the book. This extensively updated edition of the renowned textbook Gene Control will remain a valuable resource for students, instructors, researchers, and medical professionals exploring various aspects of gene control, ranging from the regulation of genes in infectious diseases to embryonic development across different organisms, from bacteria to humans.

The book describes what goes on behind the scenes in undergraduate and postgraduate medical education, scientific research and general medical practice in the United Kingdom. It covers the years 1945 to 2012 and is an account of a unique medical journey. The author was brought up by parents who were general practitioners in Yorkshire. His upbringing was thoroughly middle class and his observations of his parents work and lifestyle resulted in his wanting to be a doctor. Medical student life at University College London was hard work. Several of his teachers were eminent and world famous. Two of them were Professors J Z Young (anatomy) and Andrew Huxley (Physiology and Nobel Prize winner). Life-long friendships were made with fellow students who worked together dissecting a human body. Experiments were performed on one another. The social life in the 1960s of a group of medical student friends is described. Studying octopuses and squid in Naples, Italy. Was part of an extra degree course which was undertaken before starting hospital clinical studies? These were at The London Hospital, Whitechapel, in the east end of London. There was so much to learn before being allowed to practice as a doctor. Clinical studies were undertaken at The London Hospital, Whitechapel. This is one of the oldest hospitals in the UK. There is a huge learning curve which resulted in a doctor just about able to deal with patients. A year of pre-registration work started on the medical wards at Mile End Hospital followed by a period in the Receiving Room (Accident and Emergency Department) at The London Hospital. The pre-registration

house jobs sometimes involved working 100 hours a week. Nights in the accident emergency department were manned by one pre-registration house officer and a nurse. There is a description of what is involved undertaking research to PhD level in physiology. A new clinical thermometer was designed, tested and eventually manufactured and sold by the instrument developer Muirhead Ltd. So soon after being a student, the wheels had turned and the author was teaching students himself. There is an account of starting work as a General Practitioner in Cheltenham having not seen a single patient for the previous three years. After that he worked for a short time in a London practice and then in Castleford, West Yorkshire from 1978 to 2005. He and his wife build the practice up from a zero base to a thriving training practice housed in a large modern clinic. Doing this was financially risky as well as stressful. The development of postgraduate general practice education in Yorkshire in the last two decades of the twentieth century is described. There are descriptions of becoming a trainer of prospective GPs and then organising and managing trainers. The role of a GP tutor in the education of GPs was undertaken as a specific job. Work on the assessment of the competence of trainee GPs was overseen in the Yorkshire Deanery, based in Leeds, West Yorkshire. Work on the monitoring of the GP contract with the NHS and the GP appraisal scheme was undertaken by NHS Wakefield district, a Primary Care Trust. The author worked for both these bodies and what was involved in GP appraisal and inspection of practices target achievements is examined in detail. Work with ill and underperforming general practitioners is described as well as mentoring GPs with problems and worries. Very few patient problems and cases are included in this book which rather tells of the work that went on in the background. It is that work that produces high quality doctors and also year on year improvement in patient care. The last chapter involved informal interviews in 2012 with people studying and working in the same fields experienced over the years by the author and outlined above. Readers are asked to judge whether the present day situation is an improvement on
