This second edition of Immunology provides readers with the basic concepts of immunology and relates these to the practical applications within medicine and biology. It is therefore an ideal first textbook for students studying biomedical science courses or postgraduate students new to the subject. The entire book has been comprehensively updated and features significantly expanded coverage of, for example: ?antigen acquisition and presentation ?regulation of acquired immune responses ?transplantation and tumour immunology Throughout every chapter the authors have also provided extensive coverage of the applications of immunology to diagnostics in particular. The inclusion of a glossary in this new edition is designed to improve understanding and help students overcome their inherent fear of the complex field of immunology. In addition, this latest edition features two new appendices covering selected cytokines and their functions, and selected CD antigens and their expression, reference material that all those who work in the field will find invaluable. Reviews: "...as a work of reference

for basic immunological concepts, this book is perfect." Tove Ragna Reksten, *Scandinavian Journal of Immunology* "...The level of information is thorough throughout...[this book] would provide an excellent handbook to junior immunologists (undergraduates, new graduates, research assistants and those new to the subject) by providing a readable and understandable overview, while managing (mostly) not to be too basic or too complex. I would recommend this text book to immunology labs as an early-stage, easily readable guide to the very broad subject area of Immunology..." Airframes & Systems, Electrics, Powerplant, and Emergency Equipment (ASEPE) - Aeroplanes, subject 021, covers a broad swathe of information that is examined in one paper. To make this information manageable, the 021 subject is broken down into three volumes; these are Airframes & Systems [which incorporates Emergency Equipment], Electrics, and Powerplant. Airframes & Systems provides a good grounding in the technical aspect of an aircraft's structure and systems, detailing, for examination purposes where required, the regulations that the student has to know and the methods by which these requirements are met. As with other subjects, there will always be areas that the student has studied that are not questioned in the exam. Learning this information is not effort wasted, as the information given within the volume provides the foundation knowledge on which the type rating course can be built.

Regulations, Questions & Answers European Communities

Human error is cited as a major cause in over 70% of accidents, and it is widely agreed that a better understanding of human capabilities and limitations - both physical and psychological - would help reduce human error and improve flight safety. This book was first published when the UK Civil Aviation Authority introduced an examination in human performance and limitations for all private and professional pilot licences. Now the Joint Aviation Authorities of Europe have published a new syllabus as part of their Joint Aviation Requirements for Flight Crew Licensing. The book has been completely revised and rewritten to take account of the new syllabus. The coverage of basic aviation psychology has been greatly expanded, and the section on aviation physiology now includes topics on the high altitude environment and on health maintenance. Throughout, the text avoids excessive jargon and technical language.

"There is no doubt that this book provides an excellent basic understanding of the human body, its limitations, the psychological processes and how they interact with the aviation environment. I am currently studying for my ATPL Ground Exams and I found this book to be an invaluable aid. It is equally useful for those studying for the PPL and for all pilots who would like to be reminded of their physiological and psychological limitations." – General Aviation, June 2002

Incorporating Air Traffic Services, Aerodromes and General Topics John Wiley & Sons

Aviation-related regulations are spread out in several volumes of documents published by various agencies. Pilots, Air Traffic Controllers, Flight Dispatchers and other personnel associated with flight operations have to refer to numerous ICAO, Government of India, DGCA and Airport Authority of India publications to prepare for examinations and for handling day-to-day situations. It is not easy to access and co-relate information contained in these publications. With his background as an Air Force Officer and Instructor, Indira Gandhi Rashtriya Uran Akademi, the author has attempted to compile and blend together useful information on Air regulations to make it easy to be referred by the personnel concerned. The compilation will be useful for CPL (Air Regulations), Air Traffic Controller and Flight Dispatcher examinations. The information will also be useful to personnel associated with aviation activity.
