A man rises out of an abyss of frustration and rage and creates works of art out of destruction, goddesses out of mere dental hygienists and beauty out of death. It's also about the sickness and obsession that is LOVE. "After purposefully killing his wife in a car accident, art professor Michael Friday finds his perspective on things has become a little...warped. Via his personal journal, we're allowed into his mind to slowly watch the disintegration of it, bearing witness to his unnerving sexual cravings and ideas about killing: intertwined with the paintings he loves so much. As Michael writes, he's 'turning into something dead'; but at the same time he wants to be somebody, not a nobody. Using his diary to rant against the world in general – including everything from banks to popular culture, from national holidays like Christmas to politics – he reveals more about the big, gaping hole in his own life. But as the novel goes on the first person narrative tensely builds up, displaying his dark dreams and innermost thoughts; his way of filling that void and presenting his grisly 'works of art' to the world. As intelligent and cultured as Hannibal, easily as disturbing as American Psycho and infinitely less reassuring than Dexter, this is a sexually-charged real life horror story that will definitely stay with you." —review by Paul Kane, award-winning horror and fantasy writer Enter into Michael's world through the pages of his personal journal, where every diseased thought, disturbing dream, politically incorrect rant and sexually explicit murder highlights his journey from zero to psycho. "Wilde...is one of the finest purveyors of erotically charged horror around." —Fangoria Magazine #320 "The Venus Complex is a delicious collision of noir thriller and visceral horror. Whip-smart devious and jolting!" —Jonathan Maberry, Multiple Bram Stoker Award Winner and New York Times best-selling author of Code Zero and V-War

Discover 80 trail-blazing scientific ideas, which underpin our modern world, giving us everything from antibiotics to gene therapy, electricity to space rockets and batteries to smart phones. What is string theory or black holes? And who discovered gravity and radiation? The Science Book presents the fascinating story behind these and other of the world's most important concepts in maths,

chemistry, physics and biology in plain English, with easy to grasp "mind maps" and eye-catching artworks. Albert Einstein once quoted Isaac Newton: "If I have seen further than others, it is by standing on the shoulders of giants." Follow context panels in The Science Book to trace how one scientist's ideas informed the next. See, for example, how Alan Turing's "universal computing machine" in the 1940s led to smart phones, or how Carl Linnaeus's classifications led to Darwin's theory of evolution, the sequencing of the human genome and lifesaving gene therapies. Part of the popular Big Ideas series, The Science Book is the perfect way to explore this fascinating subject. Series Overview: Big Ideas Simply Explained series uses creative design and innovative graphics along with straightforward and engaging writing to make complex subjects easier to understand. With over 7 million copies worldwide sold to date, these award-winning books provide just the information needed for students, families, or anyone interested in concise, thought-provoking refreshers on a single subject.

Unabridged value reproduction of THE LOST WORLD by the original master of mystery Arthur Conan Doyle. Join the enigmatic and forceful Professor Challenger into the terrifying world of dinosaurs roaming wild. Adventure and mayhem, with humor sprinkled throughout, provide for a thrilling 1912 adventure through the jungles of South America that every reader should take. The Lost World, By Sir Arthur Conan Doyle, The Lost World is a novel released in 1912 by Sir Arthur Conan Doyle concerning an expedition to a plateau in the Amazon basin of South America where prehistoric animals (dinosaurs and other extinct creatures) still survive. It was originally published serially in the popular Strand Magazine and illustrated by New-Zealand-born artist Harry Rountree during the months of April-November 1912. The character of Professor Challenger was introduced in this book. The novel also describes a war between indigenous people and a vicious tribe of ape-like creatures. Edward Malone, a

reporter for the Daily Gazette, goes to his news editor, McArdle, to procure a dangerous and adventurous mission in order to impress the woman he loves, Gladys Hungerton. He is sent to interview Professor George Edward Challenger, who has assaulted four or five other journalists, to determine if his claims about his trip to South America are true. After assaulting Malone, Challenger reveals his discovery of dinosaurs in South America. Having been ridiculed for years, he invites Malone on a trip to prove his story, along with Professor Summerlee, another scientist qualified to examine any evidence, and Lord John Roxton, an adventurer who knows the Amazon and several years prior to the events of the book helped end slavery by robber barons in South America. They reach the plateau with the aid of Indian guides, who are superstitiously scared of the area.

This is the first textbook dedicated to explaining how artificial intelligence (AI) techniques can be used in and for games. After introductory chapters that explain the background and key techniques in AI and games, the authors explain how to use AI to play games, to generate content for games and to model players. The book will be suitable for undergraduate and graduate courses in games, artificial intelligence, design, human-computer interaction, and computational intelligence, and also for self-study by industrial game developers and practitioners. The

authors have developed a website (<http://www.gameaibook.org>) that complements the material covered in the book with up-to-date exercises, lecture slides and reading.

Theodore Robert Bundy is America's most infamous serial killer, the horribly depraved sex slayer of at least 39 young women and adolescent girls. Yet, this was no wild-eyed madman, no hunched gargoyle, foaming at the mouth to warn us of his bad intentions. This was a handsome, talented and articulate young man, an honors graduate for whom a bright future was predicted. This was a rising star in the Republican Party who might well have achieved his ambition of high political office. What then turned Bundy into the monster he became, a demon in the guise of an ordinary man? In this chilling new work, bestselling true crime author Robert Keller tackles the enigma, delving deep into the killer's motivations, psychology and deadly methodology, much of it taken from the words of Bundy himself. Warning!: Bundy: Portrait of a Serial Killer will keep you awake at night. It is not recommended for the squeamish or faint of heart. "A Season on the Allegheny" is a rollicking account of a year spent hunting on the Allegheny National Forest. Author Robert Hilliard tracks down more than deer, turkey, and grouse - he captures the Forest's magnificent past and finds the people who are still making history on the Allegheny today. He also pursues the many controversies that swirl around Pennsylvania's only National Forest, including anti-logging protests, Wilderness designations, and ecoterrorism. "A Season on the Allegheny" also uncovers the quiet but powerful impact of hunter-based conservation groups on National Forests. It documents the many ways - from habitat improvements to legal aid - in which groups such as the Ruffed Grouse Society, National Wild Turkey Federation, and Pheasants Forever have spent countless hours and dollars making the Allegheny National Forest a better place.

As for film and literature, the horror genre has been very popular in the video game. The World of Scary Video Games provides a comprehensive overview of the videoludic horror, dealing with the games labelled as "survival horror" as well as the mainstream and independent works associated with the genre. It examines the ways in which video games have elicited horror, terror and fear since Haunted House (1981). Bernard Perron combines an historical account with a theoretical approach in order to offer a broad history of the genre, outline its formal singularities and explore its principal issues. It studies the most important games and game series, from Haunted House (1981) to Alone in the Dark (1992- ), Resident Evil (1996-present), Silent Hill (1999-present), Fatal Frame (2001-present), Dead Space (2008-2013), Amnesia: the Dark Descent (2010), and The Evil Within (2014). Accessibly written, The World of Scary Video Games helps the reader to trace the history of an important genre of the video game.

*Rewild or Die* is a collection of essays written by Urban Scout

exploring the philosophy of the emerging rewilding renaissance, in which civilized humans are thought to be "domesticated" through thousands of years of sedentary, agrarian life. This way of life is believed to be the root of all environmental destruction and social injustice. Rewilding is the process of undoing this domestication, and restoring healthy, biologically diverse communities. Using thoughtful, humorously cynical and at times angry prose, Urban Scout explores how the ideology of civilization clashes with the wild and wild peoples, and how thinking, feeling and most importantly living wild is the only way to reach true sustainability.

That dinosaur is the Carnotaurus. The Carnotaurus is called a Carnotaur for short. The Carnotaurus was a strange creature because of the peculiar horns which grew from the top of its head and because of the many distinct characteristics it possesses that other similar dinosaurs did not have. For instance the Carnotaur was a lightly built predator whereas the t-rex was a large, bulking and heavy set predator even though both predators have tiny arms and walked on two legs. We are going to check out the reasons why the Carnotaur had the horns it had and we are going to check out all of its other nifty characteristics. It should be noted though that to appreciate dinosaurs properly, it takes more than just fossils and facts. One really has to have genuine wonder and interest in what the dinosaurs were- and this takes a bit of imagination. One really needs to understand that the dinosaurs were amazing creatures which came in all

shapes and sizes and which really probably never exist again. That means we have to make images in our mind about how the dinosaurs looked, how they acted, and even how they smelled and what they sounded like. When you really imagine what the dinosaurs were you start to experience wonder and awe about just how mysterious and cool nature and earth really are. Now let's take a step back in time and walk with the dinosaurs!

The editors utilize their 50 years of combined experience in professional engagement with the behaviour and ecology of wild felids to draw together a unique network of the world's most respected and knowledgeable experts. For the first time, this inter-disciplinary research programme is brought together within a single volume. Beginning with a complete account of all 36 felid species, there follow 8 comprehensive review chapters that span all the topics most relevant to felid conservation science, including evolution and systematics, felid form and function, genetic applications, behavioural ecology, management of species that come into conflict with people and control of international trade in felid species, conservation tools/techniques, ex situ management, and felid diseases. 19 detailed case studies then delve deeply into syntheses of the very best species investigations worldwide, written by all the leading figures in the field. These chapters portray the unique attributes of the wild felids, describe their fascinating (and conflicting) relationship with humans, and create an unparalleled platform for future research and conservation measures. A final chapter analyses the requirements of, and inter-disciplinary approaches to, practical conservation with cutting-edge examples of conservation science and action that go far beyond the cat family.
