When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead

embraced what has become known as the "sport compact"--smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book

This is a print on demand  
edition of a hard to find  
publication. Explores  
whether sufficient data exists  
to examine the temporal  
and spatial relationships that  
existed in terrorist group  
planning, and if so, could  
patterns of preparatory  
conduct be identified?  
About one-half of the  
terrorists resided, planned,  
and prepared for terrorism  
relatively close to their  
eventual target. The  
terrorist groups existed for  
1,205 days from the first  
planning meeting to the date  
of the actual/planned  
terrorist incident. The  
planning process for specific  
acts began 2-3 months prior  
to the terrorist incident.

This study examined selected  
terrorist groups/incidents in  
the U.S. from 1980-2002. It  
provides for the potential to  
identify patterns of conduct  
that might lead to  
intervention prior to the  
commission of the actual  
terrorist incidents.
