was developed to satisfy two
objectives: the first is to
provide a text suitable for use
in an advanced undergraduate or
beginning graduate course in
both space systems engineering
and space system design. The
second is to be a primer and
reference book for space
professionals wishing to
broaden their capabilities to
develop, manage the
development, or operate space
systems. The authors of the
individual chapters are
practicing engineers that have
had extensive experience in

presents the fundamentals of all
the subsystems of a spacecraft
missions and includes
illustrative examples drawn from
actual experience to enhance the
learning experience. It included
a chapter on each of the

* With this book readers might well be able to build the next Mars Rover. * First book out on Java robotics. * The biggest selling point about this book is that no one else shows readers how to combine the power of their PC with a robust programming language in Java to create exciting robotics. * The book is a great teaching aid (in

robotics or software) that establishes a new paradigm for thinking about robotics along with simpler ways to do things, i.e., vs. the old way using microcontrollers.
