I am called Jinian Footseer by some. By some, Jinian Star-Eye. And by some, the Wizard Jinian. One or two call me Dervish Daughter. On thinking it over, I decided I had been right all along. Everything I had told Peter was true. All the evidence pointed in one way and one way only. I felt as I had felt so long ago, travelling toward Bleer with Peter, when he put the clues to a mystery in my hands and asked me to make sense of it. Now, as then, all the pieces were in my hands, or my head. The great fitchhawk who had granted me a boon in Chimmerdong, and the d'bor wife, and the gobblemole. The story of Lite Star and the Daylight Bell. The Oracle. The Eesties. Yellow crystals and blue, separated by a thousand years of time. My illness in Chimmerdong, the diagnoses of Bartelmy of the Ban, the Dervish, my mother. All these. No matter how I turned them, there was no other explanation. Could anything be done?

The molecular mechanisms, which are responsible for the functional differences between the various types of neuronal synapses, have become one of the central themes of modern neurobiology. It is becoming increasingly clear that a misregulation of synaptogenesis and synaptic remodeling and dysfunctional neuronal synapses are at the heart of several human diseases, both neurological disorders and psychiatric conditions. As synapses present specialized cellular junctions between neurons and their target cells, it may not come as a surprise that neural cell adhesion molecules (CAMs) are of special importance for the genesis and the maintenance of synaptic connections. Genes encoding adhesive molecules make up a significant portion of the human genome, and neural CAMs even have been postulated to be a major factor in the evolution of the human brain. These are just some of the many reasons why we thought a book on neural CAMs and their role in establishing and maintaining neuronal synapses would be highly appropriate for summarizing our current state of knowledge. Without question, over the near future, additional adhesive proteins will join the ranks of synaptic CAMs and our knowledge, and how these molecules enable neurons and their targets to communicate effectively will grow.
