Using Dichotomous Keys to Identify Arachnids and Insects

Overview of Dichotomous Keys.

Dichotomous keys are used to identify a variety of things including insects, plants, animals and rocks. A key gives pairs of “either-or” choices that direct the user to the next pair of choices (also known as a couplet) or to the point of identification. Dichotomous keys are also used for identifying and classifying new species. Sometimes dichotomous keys use technical terminology which can make it difficult for users who lack experience in the field.
