Using Dichotomous Keys to Identify Arachnids and Insects

Using Dichotomous Keys to Identify Arachnids
and Insects Background: One kind of arachnid,
the wind scorpion, is so named because it seems
to run as fast as the wind. The sea spider,
another arachnid, lives on the ocean floor. The
trapdoor spider digs a hole in the ground,
covers it with a silk trapdoor, camouflages the

Dichotomous Key Arachnids Answers

Help "using dichotomous keys to identify arachnids and ...

Overview of Dichotomous Keys. Dichotomous keys are used to identify a variety of things including insects, plants, animals and rocks. A key gives pairs of “either-or” choices that direct the user to the next pair of choices (also known as a couplet) or to the point of identification.

Dichotomous keys are also used for identifying and classifying new species. Sometimes dichotomous keys use technical terminology which can make it

difficult for users who lack experience in the field. *Dichotomous Key Arachnids Answers* Arachnids are the largest and most well known class of the Chelicerata with around 65,000 described species. Members of Arachnida can be found on every continent. There are 11 subgroups that most authorities recognize, but the level of classification and some names are not always agrees upon. Key to the Orders of Arachnida
