Introduction: A
dichotomous key

is constructed of a series of couplets, each consisting of two separate statements. For example: By reading the two statements of

each couplet, you progress through the key from typically broad characteristics to narrower characteristics until only a single choice remains.

07 Using a Dichotomous Key - Salamanders - Salamander Unit ...

How would you modify the dichotomous key to reflect this new information? The dichotomous key in Table 5.1 provides very broad and general identifications with low taxonomic resolution, or specificity (e.g., it

stops at the order level, distinguishing frogs, salamanders, and caecilians). Compare this key to other dichotomous keys in this module.

Dichotomous keys
are very useful for
identifying an
organism as a
member of a single,
closely-related group
of organisms. In
many environments
this is sufficient to
fully identify the
species. However,
complications may
arise if multiple
closely-related
species, which may
have very similar
characteristics, live in
the same geographic
area.
