In this study, differential transform method (DTM) is applied to both integro-differential and integral equation systems. The method is further expanded with a formulation to treat Fredholm integrals. If the system considered has a solution in terms of the series expansion of known functions, this powerful method catches the exact

In this paper, we study the solvability of a class of nonlinear multiorder Caputo fractional differential equations with integral and antiperiodic boundary conditions. By using some fixed point theorems including the Banach contraction mapping principle and Schaefer's fixed point theorem, we obtain new existence and

uniqueness results for our given problem. Also, we give some examples ...

Book description. The rapid  
development of the theories  
of Volterra integral and  
functional equations has been  
strongly promoted by their  
applications in physics,  
engineering and biology.  
This text shows that the  
theory of Volterra equations  
exhibits a rich variety of  
features not present in the  
theory of ordinary
