In mathematics, an ordinary differential equation (ODE) is a differential equation containing one or more functions of one independent variable and the derivatives of those functions. The term ordinary is used in contrast with the term partial differential equation which may be with respect to more than one independent variable.

A partial differential equation (PDE) is a
differential equation that contains unknown
multivariable functions and their partial
derivatives. (This is in contrast to ordinary
differential equations, which deal with
functions of a single variable and their
derivatives.) PDEs are used to formulate
problems involving functions of several
variables, and are either solved in closed
form, or used to ...
