A partial differential equation (PDE) is a differential equation that contains unknown multivariable functions and their partial derivatives. (This is in contrast to ordinary differential equations, which deal with functions of a single variable and their derivative s.)PDEs are used to

formulate problems involving functions of several variables, and are either solved in closed form, or used to ...

Solutions Manual
In mathematics, an
ordinary differential
equation (ODE) is a
differential equation
containing one or

more functions of one
independent variable
and the derivatives of
those functions. The
term ordinary is used
in contrast with the
term partial
differential equation
which may be with
respect to more than
one independent
variable.
