In this article, we discuss the existence of solutions for coupled hybrid fractional differential equations supplemented with coupled slit-strips type boundary conditions. We make use of the standard tools of fixed point theory to obtain the desired results, which are well-illustrated with examples.

Let $f(x) = 1/g(x)$. Since the limit of $f(x)$ as x approaches 3 is infinity, the limit of $g(x)$ as x approaches 3 is 0. The limit of $(x-3)*f(x)$ as x approaches x is equal to the limit of $(x-3)/g(x)$ as x approaches 3. Plugging in 3 into the limit gives the indeterminate answer of 0/0.
