What Is the Connection between the Endocrine System and ...

While the endocrine system is concerned with the production of hormones, the digestive system is involved with processing food. Although the two systems seem quite different, the gut is actually the largest of the body's endocrine organs, making the endocrine system and digestive system closely linked. Inside the intestines, ordinary gut cells are interspersed with individual endocrine cells which make up what is called the enteric endocrine system.

Human Physiology/The endocrine system

Digestive system & central nervous system. The three articles in this series introduce you to the basic physiology of the digestive system. Dividing the digestive system into neural, cardiovascular/exocrine and endocrine sections for study simplifies learning the complex organization of this multi-organ system.

Workbook 4 - The Endocrine System Flashcards | Quizlet
Below you will find information relating to the typical second semester, college-level anatomy and physiology class. There are worksheets with answer keys, helpful charts, videos, and mnemonics to help you remember important information.

Classwork and Homework Handouts

absorbed by the body and the residues are left out. The physiological processes which are required for the digestive system are absorption ...

Digestive, Circulatory, and Respiratory Systems

The digestive and endocrine systems work together, mostly through the pancreas, to produce and disseminate digestive enzymes. The endocrine system contains several different organs and glands, which are the hypothalamus, pituitary, parathyroids, adrenal glands, reproductive glands, thyroid and pineal body. The primary role of the endocrine system is to produce important hormones that tell the digestive system when to start digesting food and when to stop.
