Strategic Urban Health Communication Charles C. Okigbo, editor People are bombarded with messages continuously and sorting through them constantly. In this milieu, critical ideas about health promotion and illness prevention are forced to compete with distracting, conflicting, even contradictory information. To get vital messages through, communication must be effective, targeted, artful—in a word, strategic. Strategic Urban Health Communication provides a road map for understanding strategy, enhancing strategic planning skills,

and implementing strategic communication campaigns. Deftly written chapters link the art and science of strategic planning to world health goals such as reducing health inequities and eradicating diseases. Flexibility is at the heart of these cases, which span developed and developing countries, uses of traditional and digital media, and chronic and acute health challenges. And the contributors ground their dispatches in the larger context of health promotion, giving readers useful examples of thinking globally while working locally. Included in the coverage: Urbanization, population, and health myths: addressing common misconceptions. Integrating HIV/family planning programs: opportunities for strategic communication. The role of sports in strategic health promotion in low-income areas. The Internet as a sex education tool: a case study from Thailand. Advertising and childhood obesity in China. Health communication strategies for sustainable development in a globalized world. Balancing depth of understanding of audiences and methods of reaching them, Strategic Urban Health Communication is a forward-looking resource geared toward professionals and researchers in urban health, global health, and health communication.

ECHNOLOGICAL PROSPECTS AND SOCIAL

APPLICATIONS SET Coordinated by Bruno Salgues There are many controversies with respect to health crisis management: the search for information on symptoms, misinformation on emerging treatments, massive use of collaborative tools by healthcare professionals, deployment of applications for tracking infected patients. The Covid-19 crisis is a relevant example about the need for research in digital communications in order to understand current health information communication. After an overview of the challenges of digital healthcare, this book offers a critical look at the organizational and professional limits of ICT uses for patients, their caregivers and healthcare professionals. It analyzes the links between ICT and ethics of care, where health communication is part of a global, humanistic and emancipating care for patients and caregivers. It presents new digitized means of communicating health knowledge that reveal, thanks to the Internet, a competition between biomedical expert knowledge and experiential secular knowledge.

Digital communication as it is practiced in Africa today is at a crossroad. This edited collection takes that crossroad as its starting point, as it both examines the complicated present and looks to the uncertain future of African communication systems. Contributing authors explore how western digital communication systems have proliferated in the African communication landscape, and argue that rich and long-cherished African forms of communal, in-person communication have been increasingly abandoned in favor of assimilation to western digital norms. As a result, future generations of Africans born on the continent and abroad may never recognize and appreciate African

systems of communications. Acknowledging that globalized digital communication systems are here to stay, the volume contends that in order to comprehend the past, present, and future of African communications, scholars need to decolonize their approach to teaching and consuming mediated and in-person communications on the African continent and abroad.

This edited book collects papers with perspectives from scholars and practitioners in Asia, Australia, and Europe to reveal the pros and cons, chances and challenges, constraints, and potential risks that educators and learners are facing as the new paradigm for communication and learning takes place, with a view to shedding light on the global education climate in the midst of the pandemic. Since the onset of the global pandemic, education has been revolutionized in almost every aspect. The emergency precautionary measures which were once

supposed to be temporary school arrangements only have now become the new normal, reshaping our understanding of learning environments, redefining the pedagogic standards in terms of teaching practices, learning designs, teacher-student interaction, feedback, and assessment. Online teaching, distanced learning, flipped classrooms, and self-paced e-learning have all played an increasingly vital role in shaping a new education culture in various education settings, affecting school management, teachers, students, and parents alike. While ICT in education, alongside new media, has provided ample benefits and convenience for educators and students, communication and virtual lessons conducted in the socially distanced classroom appear to have brought issues such as the digital divide, e-mental health, insufficient technical support, inefficient classroom management, reduced interaction between teachers and students, not to mention the growing concerns over privacy and security.
