DIHYBRID GENETICS PROBLEMS - Answers 1 In garden peas, tall (T)

vine is dominant over short (t) vine, and round pea pod (R) is dominant over wrinkled pea pod (r). Cross a homozygous tall, round pea plant with a homozygous short, wrinkled pea plant. Show the genotypes and phenotypes of the F1 offspring, and the probability of each.

## Worksheet: Dihybrid Crosses - Ms. Pici's Science

Solution: Pure (homozygous) tall pea plant = TT . Pure (homozygous) dwarf pea plant = tt (a) Parents: Thus, the off-springs of F 1 generation will be heterozygous tall. (b) Here the F 1 hybrids, i.e., heterozygous tall (Tt) are self-pollinated which may result into following possibilities:. Therefore, 3 plants will be tall and one plant will be dwarf in F 2 generation showing a ratio of 3: 1.

## Biology Genetics Problems Answer Key Monohybrid

Dihybrid Cross Problem Set. A dihybrid cross involves a study of inheritance patterns for organisms differing in two traits. Mendel invented the dihybrid cross to determine if different traits of pea plants, such as flower color and seed shape, were inherited independently. Our objective is to understand the principles that govern inheritance of different traits in a dihybrid cross that led Mendel to propose that alleles of different genes are assorted independently of one another during the ...
