In the most comprehensive book of its kind, Mark Bittman offers the ultimate baker ’ s resource. Finally, here is the simplest way to bake everything, from American favorites (Crunchy Toffee Cookies, Baked Alaska) to of-the-moment updates (Gingerbread Whoopie Pies). It explores global baking, too: Nordic ruis, New Orleans beignets, Afghan snowshoe naan. The recipes satisfy every flavor craving thanks to more than 2,000 recipes and variations: a pound cake can incorporate polenta, yogurt, ricotta, citrus, hazelnuts, ginger, and more. New bakers will appreciate Bittman ’ s opinionated advice on essential equipment and ingredient substitutions, plus extensive technique illustrations. The pros will find their creativity unleashed with guidance on how to adapt recipes to become vegan, incorporate new grains, improvise tarts, or create customized icebox cakes using a mix-and-match chart. Demystified, deconstructed, and debunked—baking is simpler and more flexible than you ever imagined.

Artificial intelligence (AI) has grown in presence in asset management and has revolutionized the sector in many ways. It has improved portfolio management, trading, and risk management practices by increasing efficiency, accuracy, and compliance. In particular, AI techniques help construct portfolios based on more accurate risk and return forecasts and more complex constraints. Trading algorithms use AI to devise novel trading signals and execute trades with lower transaction costs. AI also improves risk modeling and forecasting by generating insights from new data sources. Finally, robo-advisors owe a large part of their success to AI techniques. Yet the use of AI can also create new risks and challenges, such as those resulting from model opacity, complexity, and reliance on data integrity.

This book reports on developments in Proximal Soil Sensing (PSS) and high resolution digital soil mapping. PSS has become a multidisciplinary area of study that aims to develop field-based techniques for collecting information on the soil from close by, or within, the soil. Amongst others, PSS involves the use of optical, geophysical, electrochemical, mathematical and statistical methods. This volume, suitable for undergraduate course material and postgraduate research, brings together ideas and examples from those developing and using proximal sensors and high resolution digital soil maps for applications such as precision agriculture, soil contamination, archaeology, peri-urban design and high land-value applications, where there is a particular need for high spatial resolution information. The book in particular covers soil sensor sampling, proximal soil sensor development and use, sensor calibrations, prediction methods for large data sets, applications of proximal soil sensing, and high-resolution digital soil mapping. Key themes: soil sensor sampling – soil sensor calibrations – spatial prediction methods – reflectance spectroscopy – electromagnetic induction and electrical resistivity – radar and gamma radiometrics – multi-sensor platforms – high resolution digital soil mapping - applications Raphael A. Viscarra Rossel is a scientist at the Commonwealth Scientific and Industrial Research Organisation (CSIRO) of Australia. Alex McBratney is Pro-Dean and Professor of Soil Science in the Faculty of Agriculture Food & Natural Resources at the University of Sydney in Australia. The controversial English-language debut of celebrated Israeli novelist Yishai Sarid is a harrowing, ironic parable of how we reckon with human horror, in which a young, present-day historian becomes consumed by the memory of the Holocaust. Written as a report to the chairman of Yad Vashem, Israel's memorial to the victims of the Holocaust, our unnamed narrator recounts his own undoing. Hired as a promising young historian, he soon becomes a leading expert on Nazi methods of extermination at concentration camps in Poland during World War II and guides tours through the sites for students and visiting dignitaries. He hungrily devours every detail of life and death in the camps and takes pride in being able to recreate for his audience the excruciating last moments of the victims' lives. The job becomes a mission, and then an obsession. Spending so much time immersed in death, his connections

with the living begin to deteriorate. He resents the students lost in their iPhones, singing sentimental songs, not expressing sufficient outrage at the genocide committed by the Nazis. In fact, he even begins to detect, in the students as well as himself, a hint of admiration for the murderers—their efficiency, audacity, and determination. Force is the only way to resist force, he comes to think, and one must be prepared to kill. With the perspicuity of Kafka's The Trial and the obsessions of Delillo's White Noise, The Memory Monster confronts difficult questions that are all too relevant to Israel and the world today: How do we process human brutality? What makes us choose sides in conflict? And how do we honor the memory of horror without becoming consumed by it? Praise for The Memory Monster: “Award-winning Israeli novelist Sarid's latest work is a slim but powerful novel, rendered beautifully in English by translator Greenspan.... Propelled by the narrator's distinctive voice, the novel is an original variation on one of the most essential themes of post-Holocaust literature: While countless writers have asked the question of where, or if, humanity can be found within the profoundly inhumane, Sarid incisively shows how preoccupation and obsession with the inhumane can take a toll on one's own humanity.... it is, if not an indictment of Holocaust memorialization, a nuanced and trenchant consideration of its layered politics. Ultimately, Sarid both refuses to apologize for Jewish rage and condemns the nefarious forms it sometimes takes. A bold, masterful exploration of the banality of evil and the nature of revenge, controversial no matter how it is read.” —Kirkus Reviews, Starred Review “[A] record of a breakdown, an impassioned consideration of memory and its risks, and a critique of Israel's use of the Holocaust to shape national identity.... Sarid's unrelenting examination of how narratives of the Holocaust are shaped makes for much more than the average confessional tale.” —Publishers Weekly “Reading The Memory Monster, which is written as a report to the director of Yad Vashem, felt like both an extremely intimate experience and an eerily clinical Holocaust history lesson. Perfectly treading the fine line between these two approaches, Sarid creates a haunting exploration of collective memory and an important commentary on humanity. How do we remember the Holocaust? What tolls do we pay to carry on memory? This book hit me viscerally, emotionally, and personally. The Memory Monster is brief, but in its short account Sarid manages to lay bare the tensions between memory and morals, history and nationalism, humanity and victimhood. An absolute must-read.” —Julia DeVarti, Literati Bookstore (Ann Arbor, MI) “In Yishai Sarid's dark, thoughtful novel The Memory Monster, a Holocaust historian struggles with the weight of his profession.... The Memory Monster is a novel that pulls no punches in its exploration of the responsibility—and the cost—of holding vigil over the past.” —Eileen Gonzalez, Foreword Reviews

Metal-Organic Frameworks (MOFs) are crystalline compounds consisting of rigid organic molecules held together and organized by metal ions or clusters. Special interests in these materials arise from the fact that many are highly porous and can be used for storage of small molecules, for example H2 or CO2. Consequently, the materials are ideal candidates for a wide range of applications including gas storage, separation technologies and catalysis. Potential applications include the storage of hydrogen for fuel-cell cars, and the removal and storage of carbon dioxide in sustainable technical processes. MOFs offer the inorganic chemist and materials scientist a wide range of new synthetic possibilities and open the doors to new and exciting basic research. Metal-Organic Frameworks Materials provides a solid basis for the understanding of MOFs and insights into new inorganic materials structures and properties. The volume also reflects progress that has been made in recent years, presenting a wide range of new applications including state-of-the art developments in the promising technology for alternative fuels. The comprehensive volume investigates structures, symmetry, supramolecular chemistry, surface engineering, recognition, properties, and reactions. The content from this book will be added online to the Encyclopedia of Inorganic and Bioinorganic Chemistry: <http://www.wileyonlinelibrary.com/ref/eibc>

It started with a simple question: How can we help them? It became an international movement called NEGU: Never Ever Give Up. When Jessica Joy Rees was diagnosed with an inoperable brain tumor at age 11, she chose to focus not on herself but on bringing joy and hope to other children suffering from cancer. During the ten months she battled cancer, she and her family worked in the “Joy Factory” (originally their garage) making JoyJars®—packages filled with toys, games, and love for other kids with cancer. Jessie first handed them out personally at the hospital where she was being treated, but the effort blossomed quickly and there were soon thousands of JoyJars® being distributed across the United States and to over fifteen countries. Today, more than 100,000 kids have received JoyJars®, and they continue shipping each week to kids in over 200 children’s hospitals and 175 Ronald McDonald Houses. Jessie lost her battle with cancer in January 2012, but her message lives on in the Jessie Rees Foundation, which has become a beacon of hope for families fighting pediatric cancer. NATIONAL BESTSELLER • From the author of The River and The Dog Stars comes another "gorgeously wrought story—equal parts character study and mystery—a young woman asks Celine, a badass Brooklyn private eye, to investigate the death of her father, a nature photographer" (Entertainment Weekly). Celine is not your typical private eye. With prep school pedigree and a pair of opera glasses for stakeouts, her methods are unconventional but extremely successful. Working out of her jewel box of an apartment nestled under the Brooklyn Bridge, Celine has made a career out of tracking down missing persons nobody else can find. But when a young woman named Gabriela employs her expertise, what was meant to be Celine's last case becomes a scavenger hunt through her own memories, the secrets there and the surprising redemptions. Gabriela's father was a National Geographic photographer who went missing in Wyoming twenty years ago and while he was assumed to have been mauled by a grizzly his body was never found. Celine and her partner set out to Yellowstone National Park to follow a trail gone cold but soon realize that somebody desperately wants to keep this case closed. Combining ingenious plotting with crystalline prose and sweeping natural panoramas, Peter Heller gives us his finest work to date. Look for Peter Heller's new novel, The Last Ranger, coming soon!

A science journalist travels the world to explore humanity’s ecological devastation—and its potential for renewal in this “compelling read” (Guardian, UK). We live in times of profound environmental change. According to a growing scientific consensus, the dramatic results of man-made climate change have ushered the world into a new geological era: the Anthropocene, or Age of Man. As an editor at Nature, Gaia Vince couldn’t help but wonder if the greatest cause of this dramatic planetary change—humans’ singular ability to adapt and innovate—might also hold the key to our survival. To investigate this provocative question, Vince travelled the world in search of ordinary people making extraordinary changes to the way they live—and, in many cases, finding new ways to thrive. From Nepal to Patagonia and beyond, Vince journeys into mountains and deserts, forests and farmlands, to get an up close and personal view of our changing environment. Part science journal, part travelogue, Adventures in the Anthropocene recounts Vince's journey, and introduces an essential new perspective on the future of life on Earth.

American democracy is in deep crisis. But what do we do about it? That depends on how we understand the current threat.In Breaking the Two-Party Doom Loop, Lee Drutman argues that we now have, for the first time in American history, a genuine two-party system, with two fully-sorted, truly national parties, divided over the character of the nation. And it's a disaster. It's a party system fundamentally at odds withour anti-majoritarian, compromise-oriented governing institutions. It threatens the very foundations of fairness and shared values on which our democracy depends.Deftly weaving together history, democratic theory, and cutting-edge political science research, Drutman tells the story of how American politics became so toxic and why the country is now trapped in a doom loop of escalating two-party warfare from which there is only one escape: increase the numberof parties through electoral reform. As he shows, American politics was once stable because the two parties held within them multiple factions, which made it possible to assemble flexible majorities and kept the climate of political combat from overheating. But as conservative Southern Democrats andliberal Northeastern Republicans disappeared, partisan conflict flattened and pulled apart. Once the parties became fully nationalized - a long-germinating process that culminated in 2010 - toxic partisanship took

over completely. With the two parties divided over competing visions of nationalidentity, Democrats and Republicans no longer see each other as opponents, but as enemies. And the more the conflict escalates, the shakier our democracy feels.Breaking the Two-Party Doom Loop makes a compelling case for large scale electoral reform - importantly, reform not requiring a constitutional amendment - that would give America more parties, making American democracy more representative, more responsive, and ultimately more stable.

Heather Summerhayes was six when her four-year-old sister Pam was diagnosed with Cystic Fibrosis and given only months to live. “Sixtyfive roses” was the way Pam pronounced the name of the disease that forever altered the lives of her siblings and parents, who in turn helped alter the community’s response to the disease by founding the Canadian Cystic Fibrosis Foundation. With the help of the CF Foundation, research and new treatments, the fight to save Pam’s lasted for years, until her death at the age of twenty-six.This beautifully written memoir offers a compassionate yet unflinching eyewitness account of the hope, pain, and courage of a family in crisis as it falls apart and outs itself together again and again, to emerge stronger and more loving. The heart of the story explores the relationship between the two sisters—one devastatingly ill, the other healthy but burdened with guilt—as they journey through childhood, adolescence, and young adulthood.

An intimate, lyrical look at the ancient rite of the Irish wake--and the Irish way of overcoming our fear of death Death is a whisper for most of us. Instinctively we feel we should dim the lights, pull the curtains, and speak softly. But on a remote island off the coast of Ireland's County Mayo, death has a louder voice. Each day, along with reports of incoming Atlantic storms, the local radio runs a daily roll call of the recently departed. The islanders go in great numbers, young and old alike, to be with their dead. They keep vigil with the corpse and the bereaved company through the long hours of the night. They dig the grave with their own hands and carry the coffin on their own shoulders. The islanders cherish the dead--and amid the sorrow, they celebrate life, too. In My Father's Wake, acclaimed author and award-winning filmmaker Kevin Toolis unforgettably describes his own father's wake and explores the wider history and significance of this ancient and eternal Irish ritual. Perhaps we, too, can all find a better way to deal with our mortality--by living and loving as the Irish do.
