A world of "smart" devices means the Internet can kill people. We need to act. Now. Everything is a computer. Ovens are computers that make things hot; refrigerators are computers that keep things cold. These computers—from home thermostats to chemical plants—are all online. The Internet, once a virtual abstraction, can now sense and touch the physical world. As we open our lives to this future, often called the Internet of Things, we are beginning to see its enormous potential in ideas like driverless cars, smart cities, and personal agents equipped with their own behavioral algorithms. But every knife cuts two ways. All computers can be hacked. And Internet-connected computers are the most vulnerable. Forget data theft: cutting-edge digital attackers can now crash your car, your pacemaker, and the nation's power grid. In *Click Here to Kill Everybody*, renowned expert and best-selling author Bruce Schneier examines the hidden risks of this new reality. After exploring the full implications of a world populated by hyperconnected devices, Schneier reveals the hidden web of technical, political, and market forces that underpin the pervasive insecurities of today. He then offers common-sense choices for companies, governments, and individuals that can allow us to enjoy the benefits of this omnipotent age without falling prey to its vulnerabilities. From principles for a

more resilient Internet of Things, to a recipe for sane government regulation and oversight, to a better way to understand a truly new environment, Schneier's vision is required reading for anyone invested in human flourishing.

Lawrence Lessig, “the most important thinker on intellectual property in the Internet era”, masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few,

the so-called Big Media. Never before have the cultural powers-that-be been able to exert such control over what we can and can’t do with the culture around us. Our society defends free markets and free speech; why then does it permit such top-down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.

A provocation to reclaim our disability lineage in order to profoundly reimagine the possibilities for our relationship to disability, kinship, and carework Disability is often described as a tragedy, a crisis, or an aberration, though 1 in 5 people worldwide have a disability. Why is this common human experience rendered exceptional? In *All Our Families*, disability studies scholar Jennifer Natalya Fink argues that this originates in our families. When we cut a disabled member out of the family story, disability remains a trauma as opposed to a shared and ordinary experience. This makes disability and its diagnosis traumatic and exceptional. Weaving together stories of members of her own family with sociohistorical research, Fink illustrates how the eradication of disabled people from family narratives is rooted in racist, misogynistic, and antisemitic sorting systems inherited from Nazis. By examining the rhetoric of genetic testing, she shows that a fear of disability begins before a child is even born and that a fear of disability is, fundamentally, a fear of care. Fink analyzes our racist and sexist care systems, exposing their inequities as a source of stigmatizing ableism. Inspired by queer and critical race theory, Fink calls for a lineage of disability: a reclamation of disability as a history, a culture, and an identity. Such a lineage offers a means of seeing disability in the context of a collective sense of belonging, as cause for celebration, and is a call for a radical reimagining of carework and kinship. *All Our Families* challenges us to re-lineate disability within the family as a means of repair toward a more inclusive and flexible structure of care and community.
