Paul James has written a magnificent account of the world's current condition, one that highlights the complexities and contradictions with which people, communities, and nations must contend and that does so in a compelling and creative style. Stressing the

interaction between global and local forces, his writing style is lively and compelling as well as peppered with a wide range of citations, from Woman's Day to the Cambodian Daily (on the same page!) - James N Rosenau, University Professor of International Affairs, The George Washington University

Globalism, Nationalism, Tribalism establishes a new basis for understanding the changing nature of polity and community and offers unprecedented attention to these dominant trends. Paul James charts the contradictions and tensions we all encounter in an era of increasing globalization, from genocide and terrorism to television and finance capital. Globalism is treated as an uneven and layered process of spatial expansion, not simply one of disorder, fragmentation or rupture. Nor is it

simply a force of homogenization. Nationalism inheritance and separated as children, the is taken seriously as a continuing and important formation of contemporary identity and politics. James rewrites the modernism theories of the nation-state without devolving into the postmodernist assertion that all is invention or surface gloss. Tribalism is given the attention it has long warranted and is analyzed as a continuing and changing formation of social life, from the villages of Rwanda to the cities of the West. Theoretically adept and powerfully argued, this is the first comprehensive analysis that brings these crucial themes of contemporary life together. Stages of the Heart Oxford University Press, USA

Written in a clear and accurate language that students can understand, Trench's new book minimizes the number of explicitly stated theorems and definitions. Instead, he deals with concepts in a conversational

style that engages students. He includes more than 250 illustrated, worked examples for easy reading and comprehension. One of the book's many strengths is its problems, which are of consistently high quality. Trench includes a thorough treatment of boundary-value problems and partial differential equations and has organized the book to allow instructors to select the level of technology desired. This has been simplified by using symbols, C and L, to designate the level of technology. C problems call for computations and/or graphics, while L problems are laboratory exercises that require extensive use of technology. Informal advice on the use of technology is included in several sections and instructors who prefer not to emphasize technology can ignore these exercises without interrupting the flow of material.

Threats to international peace and security include the proliferation of weapons of mass destructions, rogue nations, and international terrorism. The United States must respond to these challenges to its national security and to world stability by embracing new military technologies such as drones, autonomous robots, and cyber weapons. These weapons can provide more precise, less destructive means to coerce opponents to stop WMD proliferation, clamp down on terrorism, or end humanitarian disasters. Efforts to constrain new military technologies are not only doomed, but dangerous. Most weapons in themselves are not good or evil; their morality turns on the motives and purposes for the war itself. These new weapons can

send a strong message without cause death or severe personal injury, and as a result can make war less, rather than more, destructive.
