In this book Michael McCarthy and Ronald Carter describe the discoursal properties of language and demonstrate what insights this approach can offer to the student and teacher of language. The authors examine the relationship between complete texts, both spoken and written, and the social and cultural contexts in which they function. They argue that the functions of language are often best understood in a discoursal environment and that exploring language in context compels us to revise commonly-held understandings about the forms and meanings of language. In so doing, the authors argue the need for language teachers, syllabus planners and curriculum organisers to give greater attention to language as discourse.

It will be of great interest to second language teachers, foreign language teachers, and special education teachers (especially those involved with the hearing impaired).

Language as Discourse Routledge

In this book, Farr examines the spoken and written language of post-observation teaching-practice feedback on teacher education programs. To do so, she draws upon theories from discourse analysis, conversation analysis, and pragmatics to frame the analysis of feedback meetings and written tutor reports, which are then examined using comparative quantitative and qualitative corpus-based techniques. The overall aim is to determine the defining characteristics of this genre, focusing especially on pragmatic factors, with the ultimate goal of investigating the salient aspects responsible for making feedback both effective and affective. Farr's research draws upon a spoken corpus of feedback interactions and a written corpus of tutor reports from language teacher education and is also strongly informed by data in the form of diary reflections and questionnaire responses from student teachers and questionnaire responses from the relevant tutors.

Discourse Analysis and Grammar Routledge
Accessible yet theoretically rich, this landmark text introduces key concepts and issues in critical discourse analysis and situates these within the field of educational research. The book invites readers to consider the theories and methods of three major traditions in critical discourse studies — discourse analysis, critical discourse analysis, and multimodal discourse analysis -- through the empirical work of leading scholars in the field. Beyond providing a useful overview, it contextualizes CDA in a wide range of learning environments and identifies how CDA can shed new insights on learning and social change. Detailed analytic procedures are included — to demystify the process of conducting CDA, to invite conversations about issues of trustworthiness of interpretations and their value to educational contexts, and to encourage researchers to build on the scholarship in critical discourse studies. This edition features a new structure; a touchstone chapter in each section by a recognized expert (Gee, Fairclough, Kress); and a stronger international focus on both theories and methods. NEW! Non-native language teachers have often been viewed as an unavoidable fate of the profession, rather than an asset worth exploring and investigating. Now that non-natives are increasingly found teaching languages, and particularly English, both in ESL and EFL contexts, the identification of their specific contributions and their main strengths has become more relevant than ever. As a result, there has recently been a surge of interest in the role of non-native teachers but little empirical research has been published so far. This volume is particularly rich in providing different approaches to the study of non-native teachers: NNS teachers as seen by students, teachers, graduate supervisors, and by themselves. It also contributes little explored perspectives, like classroom discourse analysis, or a social-psychological framework to discuss conceptions of NNS teachers.

On Discourse Analysis in Classrooms Teachers College Press

Contributions in this book illustrate the many methods available for researching language in context and for the analysis of everyday text types. Each chapter highlights language as a resource for the expression of meanings—a social semiotic resource. Text analysis is used to reveal our capacity to formulate multiple meanings for participation in different social practices—in relationships, in work, in education and in leisure. The approach is applied in text-based teaching and in the critical analysis of public discourses. The texts come from different social spheres including banking, language classes, senate hearings, national tests and textbooks, and interior architecture. Text-based research makes a major contribution to Critical Discourse Analysis. The editors and authors of this book demonstrate the value of text analysis for awareness of the role of language for accountable citizenship and for teaching and learning. This book will be of interest to anyone researching in the fields of language learning and teaching, functional linguistics, multimodality, social semiotics, systemic functional linguistics,

text-based teaching, and genre analysis, as well as literacy teachers and undergraduate and postgraduate students of linguistics, media and education.

Discourse Analysis is becoming increasingly "multimodal", concerned primarily with the interplay of language, image and sound. Video Games allow humans to create, live in and have conversations with new multimodal worlds. In this ground-breaking new textbook, best-selling author and experienced gamer, James Paul Gee, sets out a new theory and method of discourse analysis which applies to language, the real world, science and video games. Rather than analysing the language of video games, this book uses discourse analysis to study games as communicational forms. Gee argues that language, science, games and everyday life are deeply related and each is a series of conversations. Discourse analysis should not be just about language, but about human interactions with the world, with games, and with each other, interactions that make meaning and sustain lives amid risk and complexity. Written in a highly accessible style and drawing on a wide range of video games from World of Warcraft and Chibi-Robo to Tetris, this engaging textbook is essential reading for students in discourse analysis, new media and digital culture.

Discourse and Language Education Multilingual Matters

The authors present a social linguistic/social interactional approach to the discourse analysis of classroom language and literacy events. Building on recent theories in interactional sociolinguistics, literary theory, social anthropology, critical discourse analysis, and the New Literacy Studies, they describe a microethnographic approach to discourse analysis that provides a reflexive and recursive research process that continually questions what counts as knowledge in and of the interactions among teachers and students. The approach combines attention to how people use language and other systems of communication in constructing classroom events with attention to social, cultural, and political processes. The focus of attention is on actual people acting and reacting to each other, creating and recreating the worlds in which they live. One contribution of the microethnographic approach is to highlight the conception of people as complex, multi-dimensional actors who together use what is given by culture, language, social, and economic capital to create new meanings, social relationships and possibilities, and to recreate culture and language. The approach presented by the authors does not separate methodological, theoretical, and epistemological issues. Instead, they argue that research always involves a dialectical relationship among the object of the research, the theoretical frameworks and methodologies driving the research, and the

situations within which the research is being conducted. Discourse Analysis and the Study of Classroom Language and Literacy Events: A Microethnographic Perspective: *introduces key constructs and the intellectual and disciplinary foundations of the microethnographic approach; *addresses the use of this approach to gain insight into three often discussed issues in research on classroom literacy events--classroom literacy events as cultural action, the social construction of identity, and power relations in and through classroom literacy events; *presents transcripts of classroom literacy events to illustrate how theoretical constructs, the research issue, the research site, methods, research techniques, and previous studies of discourse analysis come together to constitute a discourse analysis; and *discusses the complexity of "locating" microethnographic discourse analysis studies within the field of literacy studies and within broader intellectual movements. This volume is of broad interest and will be widely welcomed by scholars and students in the field language and literacy studies, educational researchers focusing on analysis of classroom discourse, educational sociolinguists, and sociologists and anthropologists focusing on face-to-face interaction and language use.
