Discovering Chinese Pro - a groundbreaking 21st century Chinese learning program based on our State-Adopted Discovering Chinese series - is designed for middle/high school students. We completely restructured this resource by combining technology and hard

copy books, to ensure that teachers can deliver lessons with ease, with best practices built into not just the articulated sequence but also the methods of delivery. This new structure also ensures that student learning benefits from scaffolding and spirals up with ample opportunities to practice the three modes of communication - interpersonal, interpretive, and presentational.

Astronomy is written in clear non-technical language, with the occasional touch of humor and a wide range of clarifying illustrations. It has many analogies drawn from everyday life to help non-science majors appreciate, on their own terms, what our modern exploration of the

universe is revealing. The book can be used for either a one-semester or two-semester introductory course (bear in mind, you can customize your version and include only those chapters or sections you will be teaching.) It is made available free of charge in electronic form (and low cost in printed form) to students around the world. If you have ever thrown up your hands in despair over the spiraling cost of astronomy textbooks, you owe your students a good look at this one. Coverage and Scope Astronomy was written, updated, and reviewed by a broad range of astronomers and astronomy educators in a strong community effort. It is designed to meet scope and sequence requirements of introductory astronomy

courses nationwide. Chapter 1: Science and the Universe: A Brief Tour Chapter 2: Observing the Sky: The Birth of Astronomy Chapter 3: Orbits and Gravity Chapter 4: Earth, Moon, and Sky Chapter 5: Radiation and Spectra Chapter 6: Astronomical Instruments Chapter 7: Other Worlds: An Introduction to the Solar System Chapter 8: Earth as a Planet Chapter 9: Cratered Worlds Chapter 10: Earthlike Planets: Venus and Mars Chapter 11: The Giant Planets Chapter 12: Rings, Moons, and Pluto Chapter 13: Comets and Asteroids: Debris of the Solar System Chapter 14: Cosmic Samples and the Origin of the Solar System Chapter 15: The Sun: A Garden-Variety Star Chapter 16: The Sun: A Nuclear Powerhouse Chapter 17: Analyzing Starlight Chapter 18: The Stars: A Celestial Census Chapter 19: Celestial Distances Chapter 20: Between the Stars: Gas and Dust in Space Chapter 21: The Birth of Stars and the Discovery of Planets outside the Solar System Chapter 22: Stars from Adolescence to Old Age Chapter 23: The Death of Stars Chapter 24: Black Holes and Curved Spacetime Chapter 25: The Milky Way Galaxy Chapter 26: Galaxies Chapter 27: Active Galaxies, Quasars, and Supermassive Black Holes Chapter 28: The Evolution and Distribution of Galaxies Chapter 29: The Big Bang Chapter 30: Life in the Universe

Euclid's Elements (the Thirteen Books) BRILL
Four experienced teachers of beginning Chinese have developed this introductory textbook. A pilot edition has been tested widely in classrooms and refined over a period of years. Among its salient features are lessons that are lively, amusing, and relevant to everyday life: concentrated training of ear and tongue in the sound system of Chinese; extensive grammar notes, clearly presented, with attention to mistakes English-speakers are likely to make; a carefully sequenced character workbook embodying a new and effective approach to the learning of Chinese characters; and audiovisual reinforcement via a complete set of audiotapes and two videotapes, one of which offers entertaining dramatizations of the lesson dialogues. The Chinese Primer is available in two versions, one using the GR system of romanization, which employs different spellings instead of diacritical marks for different tones, the other using Pinyin romanization. The contents of the four volumes are as follows: (1) Blue Book [Lessons]: Introduction; foundation work on pronunciation; lesson dialogues in romanized Chinese and English; appendices; glossary-index. (2) Red Book [Notes and Exercises]: Vocabularies; grammar notes and culture notes keyed to the lessons; exercises. (3) Yellow Book [Character Workbook]: workbook. (4) Green Book [Pinyin Character Text]: Texts of the lessons in both traditional and simplified Chinese characters, and a Chinese introduction for teachers. The first three volumes: Blue Book, Red Book, and Yellow Book are sold as

a set (GR Set or Pinyin Set). In addition, the GR Blue Book [Lessons], GR Red Book [Notes and Exercises], and GR Yellow Book [Character Workbook], along with the Pinyin Green Book [Pinyin Character Text] are sold separately. The GR Audio and video materials are available from the Chinese Linguistics Project at Princeton University for use with this text. Published by OpenStax College, U.S. History covers the breadth of the chronological history of the United States and also provides the necessary depth to ensure the course is manageable for instructors and students alike. U.S. History is designed to meet the scope and sequence requirements of most courses. The authors introduce key forces and major developments that together form the American experience, with particular attention paid to considering issues of race, class and

gender. The text provides a balanced approach to U.S. history, considering the people, events and ideas that have shaped the United States from both the top down (politics, economics, diplomacy) and bottom up (eyewitness accounts, lived experience).

Forecasting: principles and practice MacMillan
This book analyzes the discovery of Chinese logic as a paradigmatic case of the epistemic shifts that have shaped interpretations of China's intellectual heritage. Reconstructing the transcultural

genealogy of a modern discourse, adds a neglected chapter to the global history of philosophy. *Geek in China* W. W. Norton This book is an introduction to the language and standard proof methods of mathematics. It is a bridge from the computational courses (such as calculus or differential equations) that students typically encounter in their first year of college to a more abstract outlook. It lays a foundation for more theoretical courses such as topology, analysis and abstract algebra. Although it may be more meaningful to the student who has had some calculus, there is really no prerequisite other than a measure of mathematical maturity.

What key social forces construct and transform our lives as individuals and as members of society? How does our social world shape us? How do we shape our world? Discover Sociology presents sociology as a discipline of curious minds. The authors inspire curiosity about the social world and empower students by providing the theoretical, conceptual, and empirical tools they need to understand, analyze, and even change the world in which they live. Organized around four main themes—The Sociological Imagination, Power and Inequality, Technological Transformations of Society, and Globalization—the book illuminates the social roots of diverse phenomena and institutions, ranging from poverty and deviance to capitalism and the nuclear family. "Behind the

Numbers" features illustrate the practical side of sociology and shows students how to be critical consumers of social science data reported in the media. And every chapter addresses the question, "What can I do with a sociology degree?" by linking the knowledge and skills acquired through studying sociology with specific jobs and career paths. Discovering Chinese Cheng & Tsui The I Ching is perhaps the oldest writing philosophy, cosmology, divination and self-transformation in Chinese civilisation. Used as a

divinatory tool, the I Ching is a powerful instrument to develop intuition and perception. The I Ching Workbook is a fascinating guide on how to use the I Ching, including its history and associated legends, the symbolism of the eight trigrams, methods for casting hexagrams and detailed descriptions of the meanings of the sixty-four hexagrams. It also explores the connections between the I Ching, Eastern philosophy and feng shui. The I Ching Workbook will guide you, step by step, through the ancient wisdom of the I Ching. Learn how to cast hexagrams and then do insightful readings for yourself and others. Follow the exercises and discover which trigrams resonate with you, how to form questions to receive clear answers and how to interpret the practical advice found within the lyrical descriptions of the sixty-four hexagrams. Roger Green is a certified natural health counsellor and runs training programmes on the I Ching, natural medicines and feng shui. The curriculum he established for teaching feng shui is now being used in Europe, the USA and

The Discovery of Chinese Logic
Macmillan Elt
Euclid was a mathematician from the Greek city of Alexandria who lived during the 4th and 3rd century B.C. and is often referred to as the "father of geometry." Within his foundational treatise "Elements," Euclid presents the results of earlier mathematicians and includes many of his own theories in a systematic, concise book that utilized a brief set of axioms and meticulous proofs to solidify his deductions. In addition to its easily referenced geometry, "Elements" also includes number theory and other mathematical considerations. For centuries, this work was a primary textbook of mathematics, containing the only framework for geometry known by mathematicians until the development of "non-Euclidian" geometry in the late 19th century. The extent to which Euclid's "Elements" is of his own original authorship or borrowed from previous scholars is unknown, however despite this fact it was his collation of these basic

mathematical principles for which most of the world would come to the study of geometry. Today, Euclid's "Elements" is acknowledged as one of the most influential mathematical texts in history. This volume includes all thirteen books of Euclid's "Elements," is printed on premium acid-free paper, and follows the translation of Thomas Heath. *Resources in Education* SAGE Publications

Teaching and Learning Chinese in Higher Education deals with the current issues and challenges faced by teachers and learners of Chinese.

Written by leading professionals and academics, the book is the first collection of research articles

based on data collected in higher education institutions in the UK. The studies focus on concerns related to learners of Chinese as a foreign language (CFL) and aim to establish studies on teaching Chinese as a foreign language (TCFL) as part of the mainstream of applied linguistics

The contributors have applied their theoretical backgrounds in applied linguistics and education to tackle issues such as how to benchmark the Chinese written language with CEFR, how to integrate standardised Chinese proficiency tests with institutional assessments and teaching methodologies.

Teaching and Learning Chinese in Higher Education will be invaluable to professionals, academics and students seeking theoretical frameworks in applied linguistics for TCFL.

Forecasting is required in many situations. Stocking an inventory may require forecasts of demand months in advance. Telecommunication routing requires traffic forecasts a few minutes ahead. Whatever the circumstances or time horizons involved,

forecasting is an important aid in effective and efficient planning. This textbook provides a comprehensive introduction to forecasting methods and presents enough information about each method for readers to use them sensibly.
