The Four Loves is a 1960 book by C. S. Lewis which explores the nature of love from a Christian and philosophical perspective through thought experiments. The book was based on a set of radio talks from 1958 which had been criticized in the U.S. at the time for their frankness about sex. C.S. Lewis examines storge or empathy love; philia, friendship love; eros, romantic love; and agape, or God love. Excerpt: "GOD is love," says St. John. When I first tried to write this book I thought that his maxim would provide me with a very plain highroad through the whole subject. I thought I should be able to say that human loves deserved to be called loves at all just in so far as they resembled that Love which is God."

Infectious diseases are the leading cause of death globally, particularly among children and young adults. The spread of new pathogens and the threat of antimicrobial resistance pose particular challenges in combating these diseases. Major Infectious Diseases identifies feasible, cost-effective packages of interventions and strategies across delivery platforms to prevent and treat HIV/AIDS, other sexually transmitted infections, tuberculosis, malaria, adult febrile illness, viral hepatitis, and neglected tropical diseases. The volume emphasizes the need to effectively address emerging antimicrobial resistance, strengthen health systems, and increase access to care. The attainable goals are to reduce incidence, develop innovative approaches, and optimize existing tools in resource-constrained settings.

The ability to analyze and interpret enormous amounts of data has become a prerequisite for success in allied healthcare and the health sciences. Now in its 11th edition, *Biostatistics: A Foundation for Analysis in the Health Sciences* continues to offer in-depth guidance toward biostatistical concepts, techniques, and practical applications in the modern healthcare setting. Comprehensive in scope yet detailed in coverage, this text helps students understand—and appropriately use—probability distributions, sampling distributions, estimation, hypothesis testing, variance analysis, regression, correlation analysis, and other statistical tools fundamental to the science and practice of medicine. Clearly-defined pedagogical tools help students stay up-to-date on new material, and an emphasis on statistical software allows faster, more accurate calculation while putting the focus on the underlying concepts rather than the math. Students develop highly relevant skills in inferential and differential statistical techniques, equipping them with the ability to organize, summarize, and interpret large bodies of data. Suitable for both graduate and advanced undergraduate coursework, this text retains the rigor required for use as a professional reference.

Throughout the twentieth century, governments sought to achieve 'development' not only in their own countries, but also in other regions of the world; particularly in Africa, Asia, Latin America and the Caribbean. This focus on 'development' as a goal has continued into the twenty-first century, for example through the United Nations Millennium Development Targets. While development is often viewed as something very positive, it is also very important to consider the possible detrimental effects it may have on the natural environment, different social groups and on the cohesion and stability of societies. In this important book, Katie Willis investigates and places in a historical context, the development theories behind contemporary debates such as globalization and transnationalism. The main definitions of 'development' and 'development theory' are outlined with a description and explanation of how approaches have changed over time. The differing explanations of inequalities in development, both spatially and socially, and the reasoning behind different development policies are also considered. By drawing on pre-twentieth century European development theories and examining current policies in Europe and the USA, the book not only stresses commonalities in development theorizing over time and space, but also the importance of context in theory construction. This topical book provides an ideal introduction to development theories for students in geography, development studies, area studies, anthropology and sociology. It contains student-friendly features, including boxed case studies with examples, definitions, summary sections, suggestions for further reading, discussion questions and website information.

Very few authors have addressed the origins of capitalism in France as the emergence of a distinct form of historical society, premised on a new configuration of social power, rather than as an extension of commercial activities liberated from feudal obstacles. Xavier Lafrance offers the first thorough historical analysis of the origins of capitalist social property relations in France from a 'political Marxist' or (Capital-centric Marxist) perspective. Putting emphasis on the role of the state, *The Making of Capitalism in France* shows how the capitalist system was first imported into this country in an industrial form, and considerably later than is usually assumed. This work demonstrates that the French Revolution was not capitalist, and in fact consolidated customary regulations that formed the bedrock of the formation of the working class.

National Book Award Finalist: "This man's ideas may be the most influential, not to say controversial, of the second half of the twentieth century." —Columbus Dispatch At the heart of this classic, seminal book is Julian Jaynes's still-controversial thesis that human consciousness did not begin far back in animal evolution but instead is a learned process that came about only three thousand years ago and is still developing. The implications of this revolutionary scientific paradigm extend into virtually every aspect of our psychology, our history and culture, our religion—and indeed our future. "Don't be put off by the academic title of Julian Jaynes's *The Origin of Consciousness in the Breakdown of the Bicameral Mind*. Its prose is always lucid and often lyrical...he unfolds his case with the utmost intellectual rigor." —The New York Times "When Julian Jaynes...speculates that until late in the twentieth millennium BC men had no consciousness but were automatically obeying the voices of the gods, we are astounded but compelled to follow this remarkable thesis." —John Updike, *The New Yorker* "He is as startling as Freud was in *The Interpretation of Dreams*, and Jaynes is equally as adept at forcing a new view of known human behavior." —American Journal of Psychiatry

'James is a titan of twentieth-century politics and culture' Sunday Times 'The Black Jacobins is not only a groundbreaking

historical work; it is a masterpiece in storytelling and analysis' Gary Younge The iconic study of the Haitian revolution, by one of the most important historians of the twentieth century C. L. R. James's pioneering account of the 1791 San Domingo slave revolt and the creation of the republic of Haiti changed the way colonial history was written. By putting the experiences of the slave rebels, led by Toussaint L'Ouverture, centre stage, James made them agents of their own story. His work, written as part of the fight to end colonialism in Africa, helped inspire radical liberation movements worldwide, from Black Power to Castro's revolution in the Caribbean. The hauntingly prophetic classic novel set in a not-too-distant future where books are burned by a special task force of firemen.

'Another indispensable classic' The Times 'Ray Bradbury's gift for storytelling reshaped our culture and expanded our world' Barack Obama Guy Montag is a fireman. His job is to burn books, which are forbidden, being the source of all discord and unhappiness. Even so, Montag is unhappy; there is discord in his marriage. Are books hidden in his house? The Mechanical Hound of the Fire Department, armed with a lethal hypodermic, escorted by helicopters, is ready to track down those dissidents who defy society to preserve and read books. The classic dystopian novel of a post-literate future, Fahrenheit 451 stands alongside Orwell's 1984 and Huxley's Brave New World as a prophetic account of Western civilization's enslavement by the media, drugs and conformity. Bradbury's powerful and poetic prose combines with uncanny insight into the potential of technology to create a novel which, decades on from first publication, still has the power to dazzle and shock.

The Varieties of Religious Experience

Black Skin, White Masks is a classic, devastating account of the dehumanising effects of colonisation experienced by black subjects living in a white world. First published in English in 1967, this book provides an unsurpassed study of the psychology of racism using scientific analysis and poetic grace. Franz Fanon identifies a devastating pathology at the heart of Western culture, a denial of difference, that persists to this day. A major influence on civil rights, anti-colonial, and black consciousness movements around the world, his writings speak to all who continue the struggle for political and cultural liberation. With an introduction by Paul Gilroy, author of There Ain't No Black in the Union Jack.
