Discovering Statistics Using R Cengage Learning

The purpose of the study was to identify common themes on the Thematic Apperception Test (TAT) for Japanese subjects. In addition, Japanese TAT themes were compared with American TAT themes (Stein, 1981) for any significant differences. It was hypothesized that significant differences in narrative themes would exist between Japanese and American subjects. The subjects included sixty male and female college students attending courses in Tokyo, Japan. Subjects were enrolled in college courses during the administration of the test and ranged in age from 18 to 27 years of age. All the participants were fluent in English—allowing them to make responses in that language; therefore, eliminating the errors inherent in translation. Japanese subjects were then compared with Morris I. Stein's original study of eighty American males conducted in 1981. Ten of the original Murray TAT cards were used: 1, 2, 3BM, 4, 6BM, 7GF, 8BM, 10, 11 and 14. Japanese narratives were then scored using five variables for each of the ten cards: hero gender, the incidence of death, need for achievement, dominant emotional tone and the outcome of the story. In conclusion, common TAT themes for Japanese subjects were identified for all ten of the cards that were administered. Cards 1, 2, 4, 8BM, 10, 11 and 14 shared many of the same themes for Japanese and American subjects. On the other hand, cards 3BM, 6BM and 7GF varied in theme content for Japanese and American subjects. These findings will help determine the validity and reliability of the TAT as an assessment tool for Japanese subjects, and open the door for future studies of Asian populations in the United States as this population is underrepresented in much of the research and literature of today.

Discovery Series: Introduction to Psychology Macmillan

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution—and the authors' excitement about it.
