"Few of us really appreciate the full power of math--the extent to which its influence is not only in every office and every home, but also in every courtroom and hospital ward. In this ... book, Kit Yates explores the true stories of life-changing events in which the application--or misapplication--of mathematics has played a critical role: patients crippled by faulty genes and entrepreneurs bankrupted by faulty algorithms; innocent victims of miscarriages of justice; and the unwitting victims of software glitches"--Publisher marketing.

This book offers a theoretical and epistemological-methodological framework as an alternative approach to the instrumental-descriptive methodology that has prevailed in psychology to date. It discusses the differences between the proposed approach and other theoretical and

methodological positions, such as discourse analysis, phenomenology and hermeneutics. Further, it puts forward a proposal that allows the demands of studying subjectivity to be addressed from a cultural-historical standpoint. The book mainly highlights case studies that have been conducted in various countries, and which employ or depart from the theoretical, epistemological and methodological proposals that guide this book. The research discussed here introduces readers to new discussions on theoretical and methodological issues in subjectivity that have increasingly attracted interest.

"No one is rich enough to do without a neighbor."

Traditional Danish Proverb This bit of Danish folk wisdom expresses an idea underlying much of the current thinking about social support. While the clinical literature has for a long time recognized the deleterious effects of unwholesome social relationships, only more recently has the focus broadened to include the

positive side of social interaction, those interpersonal ties that are desired, rewarding, and protective. This book contains theoretical and research contributions by a group of scholars who are charting this side of the social spectrum. Evidence is increasing that maladaptive ways of thinking and behaving occur disproportionately among people with few social supports. Rather than sapping self-reliance, strong ties with others particularly family members seem to encourage it. Reliance on others and self-reliance are not only compatible but complementary to one another. While the mechanism by which an intimate relationship is protective has yet to be worked out, the following factors seem to be

involved: intimacy, social integration through shared concerns, reassurance of worth, the opportunity to be nurtured by others, a sense of reliable alliance, and guidance. The major advance that is taking place in the literature on social support is that reliance is being placed less on anecdotal and clinical evidence and more on empirical inquiry. The chapters of this book reflect this important development and identify the frontiers that are currently being explored.
