Why doesn't Batman just kill the Joker and end everyone's misery?

Can we hold the Joker morally responsible for his actions? Is

Batman better than Superman? If

everyone followed Batman's example, would Gotham be a better

place? What is the Tao of the Bat? Batman is one of the most complex

characters ever to appear in comic books, graphic novels, and on the

big screen. What philosophical trials does this superhero confront

in order to keep Gotham safe? Combing through seventy years of

comic books, television shows, and movies, Batman and Philosophy

explores how the Dark Knight grapples with ethical conundrums,

moral responsibility, his identity crisis, the moral weight he carries

to avenge his murdered parents, and much more. How does this

Many people have become impatient with school reform and school improvement efforts that fail to include school climate. The importance of a positive school climate is emerging in current research, not only as an essential component of school reform and school improvement, but also as a necessary framework for maintaining excellent schools and providing healthy and safe schools for all students. Research strongly suggests that educators and policy makers have a lot to learn about the importance of school climate for school safety and academic success. With the growing body of research regarding school climate, it is important to study the research and understand how the psychology of school climate and how the elements of school climate can be viewed from a population-based perspective, as well as understanding the impact of school climate on individual students. This review of school climate research includes hundreds of articles and research papers of different perspectives from

around the world in numerous cultures. School climate is becoming a science of education and psychology that must be studied further in order to understand the dynamic nature of learning environments, to identify elements that support or threaten the learning environment, and to learn how to improve the conditions for learning in all schools.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it.
