Computational Finance, an exciting new cross-disciplinary research area, depends extensively on the tools and techniques of computer science, statistics, information systems and financial economics for educating the next generation of financial researchers, analysts, risk managers, and financial information technology professionals. This new discipline, sometimes also referred to as "Financial Engineering" or "Quantitative Finance" needs professionals with extensive skills both in finance and mathematics along with specialization in computer science. Soft-Computing in Capital Market hopes to fulfill the need of applications of this offshoot of the technology by providing a diverse collection of cross-disciplinary research. This edited volume covers most of the recent, advanced research and practical areas in computational finance, starting from traditional fundamental analysis using algebraic and geometric tools to the logic of science to explore information from financial data without prejudice. Utilizing various methods, computational finance researchers aim to determine the financial risk with greater precision that certain financial instruments create. In this line of interest, twelve papers dealing with new techniques and/or novel applications related to computational intelligence, such as statistics, econometrics, neural-network, and various numerical algorithms are included in this volume.

"Innovation and entrepreneurship are ubiquitous today, both as fields of study and as starting points for conversations among experts in government and economic development. But while these areas continue to attract public and private investments, many measurements of their resulting economic growth-including productivity growth and business dynamism-have remained modest. Why this difference? Because not all business sectors are the same, and the transformative gains of some industries have been offset by stagnation or contraction in others. Accordingly, a nuanced understanding of the economy requires a nuanced understanding of where innovation and entrepreneurship occur and where they matter.

Answering these questions allows for strategic public investment and the infrastructure for economic growth. The Role of Innovation and Entrepreneurship in Economic Growth, the latest entry in the NBER conference series, seeks to codify these answers. The editors leverage industry studies to identify specific examples of productivity improvements enabled by innovation and entrepreneurship, including those from new production technologies, increased competition, new organizational forms, and other means. Taken together, the volume illuminates whether the contribution of innovation and entrepreneurship to economic growth is likely to be concentrated, be it selected sectors or more broadly"--

Intellectual capital (IC) became a hot topic in economic discussion at the turn of this century, believed to offer new principles which could help build the new intangible economy after the collapse of the Soviet Union and the Internet revolution. The early enthusiasm of the 2000s has slightly subsided today, however, though many of the underlying assumptions relating to the importance of intangible assets are still valid. As such, it is much more appropriate today to discuss issues related to IC as 'images of intellectual capital' rather than 'rules'. Intellectual capital explains a plethora of phenomena in today's business organisations, and this book takes a post-modern approach to the issue of IC and offers a selection of different perspectives. They include analyses of intellectual capital in education, business, and in the public sector. The chapters collected here are authored by university professors, business practitioners and students, and investigate such issues as the relative importance of intellectual capital components to tangible components of a company's value, the impact of ICT on IC, the measurement methods for IC, and different forms of communication for the disclosure of IC.

This book is about the relationship between firm dynamics, innovation and globalization, the processes that are essential for long term economic growth and welfare creation. This volume deals with these three issues in three sections titled respectively: entrepreneurship, new firm formation and growth; productivity-innovation-growthnexus; globalization, multinational firms and producers' dynamics. The book presents new studies written by distinguished researchers in the field, who use state-of-the-art methodologies and extensive sources of firm- and plant-level longitudinal data to analyze and understand these major economic issues facing modern economies. In the first section, the book proposes two comprehensive introductory surveys which explore in detail the underpinnings of entrepreneurship, new firm formation and growth in advanced and developing countries. The second fundamental issue, productivity-innovation and firm dynamics, is approached by examining key drivers of selection mechanisms such as size, scale elasticity, innovative efforts, financial fragility of the firms, barriers to entry and exit, capital and financial market distortions, institutional inefficiencies and other market imperfections which affect the ability of firms to expand or enter. The third section examines differences, linkages and intertwined evolution of foreign and domestic firms in their dynamics of survival and growth in different institutional contexts and periods. Each chapter includes a detailed discussion of the implications of the respective analyses for enterprise policy. In a concluding chapter the overall implications for enterprise policy of the analyses presented in the different chapters are drawn by the Editors. This approach ensures that the book is integrated around a coherent central theme in comprehensive framework. The book responds to a growing concern among scholars, professionals, and policy makers over the recent decades about firm ability to survive and compete in a context of increasing globalization and international competition. The approach adopted is both theoretical and empirical with consideration of paradigmatic case studies in Europe, Africa and Asia, providing new evidence on developed, developing and transition economies in a comparative perspective. The cases selected represent different levels of development, different firms strategies and paths, with distinct outcomes. The book is an essential reading for scholars and students concerned with industry development, public policy and globalization, as well as to all those involved professionally in such issues.

Empirical Analysis of Entrepreneurship and Economic Growth Routledge

Due to the 2008-2009 crisis, the United Nations 2030 agenda for sustainable development, and the COVID-19 pandemic, the role of entrepreneurship has become more critical in most economies. Moreover, emerging protectionist policies are further encouraging the emergence of new entrepreneurial projects, particularly to replace goods and services traditionally provided by other countries. Understanding current challenges and best practices in nascent entrepreneurship is integral for the successful launching of new ventures to support the revitalization of economies and achieve sustainability. The Handbook of Research on Nascent Entrepreneurship and Creating New Ventures is a crucial reference source that covers the latest empirical research findings in the field of entrepreneurship and addresses the obstacles entrepreneurs face in these recent challenging times. The book embraces a pluralistic perspective from academicians currently navigating nascent entrepreneurship and key concepts for launching successful new ventures. Covering topics that include government support programs, spin-off companies, leadership, strategic entrepreneurship, and crowdfunding, this book is targeted towards entrepreneurs, professionals, academicians, researchers, and students.

With the need for sustainability, a focus on developing an economic system that aims at minimizing waste, commonly referred to as the circular economy, is emerging. Circular economy and studies related to it have gained worldwide attention, as it seems to be an effective alternative economic system. Naturally, the circular economy will impact enterprises and will shift how entrepreneurship development and entrepreneurial opportunities are perceived, developed, and resourced. The Handbook of Research on Entrepreneurship Development and Opportunities in Circular Economy is a collection of pioneering research that advances the understanding of entrepreneurship development, identifies the opportunities, and manages the entrepreneurship development, policies, and programs in order to further a circular economy. In addition to entrepreneurship development and entrepreneurial opportunities, the book will cover and discuss a number of other factors necessary for a successful transformation, such as entrepreneurship and innovation, entrepreneurship and change, and entrepreneurship education. While highlighting topics including consumer consumption, knowledge management, and linear economics, this book is ideally designed for entrepreneurs, small business owners, managers, consultants, organization development specialists, policymakers, researchers, industry experts, academicians, and students.

This book investigates spatial institutional variation and its influence on entrepreneurial activity in the Russian Federation, building on an innovative geometric clustering approach. The book looks into how entrepreneurial entry can be explained by institutional factors at the regional level. Furthermore, it examines the relevance of understanding entrepreneurial ecosystems as systems of interrelated elements whose overall function may be impeded by individual components. Most importantly, substantial evidence is presented that higher levels of regional democratization and the liberties that come with them are essential prerequisites for higher rates of entrepreneurial entry and innovation in Russia. The author draws on a comprehensive panel dataset and an unconventional prediction model approach to account for the interrelatedness of institutions with regard to their effects on entrepreneurship. The heterogeneous transition context of the Russian Federation, which continues to have one of the lowest shares of innovative founders, provides an ideal setting for investigating the tedious efforts to tilt at the windmills of transition. Accordingly, the book is a must-read for researchers, scholars, practitioners and policymakers seeking a better understanding of spatial economics, entrepreneurship, economic development, transition economics, public administration and political studies.

Handbook of Research on Entrepreneurship and Regional Development Penguin

Innovation stimulates and facilitates entrepreneurship because the highest levels of entrepreneurship are to be found in societies with the highest value creation and digital dividends. The higher levels of consumption, employment, and cost reduction generated by the implementation of digital technologies motivates entrepreneurs to expand their activity and promotes the emergence of new entrepreneurs. Positive outcomes can be generated by the implementation of innovation leaders to higher competition and new markets, incentivizing entrepreneurs to introduce new innovations to react to these higher levels of competition, which are accompanied by their corresponding value creation. Analyzing the Relationship Between Innovation, Value Creation, and Entrepreneurship is a pivotal reference source that analyzes the theoretical and empirical

aspects of innovation as a factor that enhances value creation and the role of entrepreneurship. While highlighting topics such as data management, social enterprise, and digital marketing, this publication explores enhanced economic growth and the methods of higher levels of consumption in society. This book is ideally designed for corporate managers, business executives, academicians, students, and researchers seeking current research on interrelationships between financial variables, strategies to apply them at the micro- and macro-level, and a consideration of the fiscal effects once implemented.

Innovation, Globalization and Firm Dynamics Routledge

This book was first published in 2004. National economic growth is fueled by the development of high technology clusters such as Silicon Valley. The contributors examine the founding of ten clusters that have been successful at an early stage of growth in information technology. Their key finding is that the economics of starting a cluster is very different from the positive feedback loop that sustains an established cluster. While 'nothing succeeds like success' in an established cluster, far more difficult, risky and unlikely are the initial conditions that give rise to successful clusters. The contributors find regularities in the start of the successful clusters studied, including Silicon Valley around 1964. These cases contain 'old economy' factors such as competencies, firm building capabilities, managerial skills, and connection to markets, more than the flamboyant 'new economy' factors that have been highlighted in prevailing years.

The Routledge Handbook of Entrepreneurship in Developing Economies is a landmark volume that offers a uniquely comprehensive overview of entrepreneurship in developing countries. Addressing the multi-faceted nature of entrepreneurship, chapters explore a vast range of subject areas including education, economic policy, gender and the prevalence and nature of informal sector entrepreneurship. In order to understand the process of new venture creation in developing economies, what it means to be engaged in entrepreneurship in a developing world context must be addressed. This handbook does so by exploring the difficulties, risks and rewards associated with being an entrepreneur, and evaluates the impacts of the environment, relationships, performance and policy dynamics on small and entrepreneurial firms in developing economies. The handbook brings together a unique collection of over forty international researchers who are all actively engaged in studying entrepreneurship in a developing world context. The chapters offer concise but detailed perspectives and explanations on key aspects of the subject across a diverse array of developing economies, spanning Africa, Asia, Latin America and Eastern Europe. In doing so, the chapters highlight the heterogeneity of entrepreneurship in developed economies, and contribute to the on-going policy discourses for managing and promoting entrepreneurial growth in the developing world. The book will be of great interest to scholars, students and policymakers in the areas of development economics, business and management, public policy and development studies.

Interest in and attention to entrepreneurship has exploded in recent years. Nevertheless, much of the research and scholarship in entrepreneurship has remained elusive to academics, policymakers and other researchers, in large part because the field is informed by a broad spectrum of disciplines, including management, finance, economics, policy, sociology, and psychology, often pursued in isolation from each other. Since its original publication in 2003, the Handbook of Entrepreneurship Research has served as the definitive resource in the field, bringing together contributions from leading scholars in these disciplines to present a holistic, multi-dimensional approach. This new edition, fully revised and updated, and including several new chapters, covers all of the primary topics in entrepreneurship, including entrepreneurial behavior, risk and opportunity recognition, equity financing, business culture and strategy, innovation, and the impact of entrepreneurship on economic growth and development. Featuring an integrative introduction, extensive literature reviews and reference lists, the Handbook will continue to serve as a roadmap to the rapidly evolving and dynamic field of entrepreneurship.

Handbook of Research on Approaches to Alternative Entrepreneurship Opportunities Oxford University Press

This book is a well written and handy source for readers. Additionally, it provides an overview of current issues relevant to the development of entrepreneurial policy, which is based on interesting case studies across a number of nations. . . Dessy Irawati, International Journal of Entrepreneurial Behaviour and Research What is new in the world is the need to understand business dynamics; the entry, exit and growth of firms in the economy. This dynamic firm structure, as opposed to the static firm structure that dominated past thinking, has spurred an outpouring of research. The heart of the issue is that while many have identified the importance of business dynamics (entry and exit) we have only recently taken a closer look at the ecological system in which some companies must die for others to thrive. Entrepreneurs are the predators of this system. Public policy in an entrepreneurial economy (dynamic) must limit the forces that prevent firm exit and foster the forces that promote firm entry. This book makes an important contribution to the debate. Zoltan J. Acs, George Mason University, US and Max Planck Institute of Economics, Germany This unique Handbook provides a solid foundation for essential study in the nascent field of entrepreneurship policy research. This foundation is initially developed via the exploration of two significant propositions underpinning the nature of entrepreneurship policy research. The first is that entrepreneurship has emerged as a bona fide focus of public policy, particularly with respect to economic growth and employment creation. The second is that neither scholars nor policy makers are presently equipped to understand the public policy role for entrepreneurship. The contributors experienced scholars, specialist researchers and dynamic policy makers thus grapple with novel questions of considerable policy relevance that few have previously posed. The Handbook therefore provides some of the first crucial, systematic analyses of important issues, and key questions to be raised in order to move entrepreneurship policy forward are also presented. Written by academics and practitioners drawing examples from both North America and Europe, this stimulating new Handbook is a prerequisite for students, scholars and practitioners in the incipient world of entrepreneurship policy.

Tilting at the Windmills of Transition Universal-Publishers

Business is one of the major power centres in modern society. The state seeks to check and channel that power so as to serve broader public policy objectives. However, if the way in which business is governed is ineffective or over burdensome, it may become more difficult to achieve desired goals such as economic

growth or higher levels of employment. In a period of international economic crisis, the study of how business and government relate to each other in different countries is of more central importance than ever. These relationships have been studied from a number of different disciplinary perspectives - business studies, economics, economic history, law, and political science - and all of these are represented in this handbook. The first part of the book provides an introduction to the ways in which five different disciplines have approached the study of business and government. The second section, on the firm and the state, looks at how these entities interact in different settings, emphasising such phenomena as the global firm and varieties of capitalism. The third section examines how business interacts with government in different parts of the world, including the United States, the EU, China, Japan and South America. The fourth section reviews changing patterns of market governance through a unifying theme of the role of regulation. Business-government relations can play out in divergent ways in different policy and the fifth section examines the contrasts between different key arenas such as competition policy, trade policy, training policy and environmental policy. The volume provides an authoritative overview with chapters by leading authorities on the current state of knowledge of business-government relations, but also points to ways in which this work might be developed in the future, e.g., through a political theory of the firm.

Theories of Local Economic Development Edward Elgar Publishing

This edited volume brings together research on symbiotic themes of entrepreneurship, resource planning, and regional development and their impact on global-local business imperatives. Discussions in this volume critically analyze the convergence of entrepreneurship, innovation, technology, business practices, public policies, political ideologies, and consumer values for improving the global-local business paradigm to support regional development. This book also delves into contemporary entrepreneurship models, converging business strategies towards entrepreneurial and industrial alliance in manufacturing, services, and marketing organizations. It contemplates the development of new business models and hybrid entrepreneurial perspectives to match the changing priorities of regional economic development in developing countries. This volume offers scholars new entrepreneurial visions and business perspectives of industries in emerging markets, while presenting a more integrated view to enable companies to innovate for long-term profitability and sustainability.

While the public policy community has turned to entrepreneurship to maintain, restore, or generate economic prosperity, the economics profession has been remarkably taciturn in providing guidance for public policy for understanding the links between entrepreneurship and economic growth as well as for framing and weighing policy issues and decisions. The purpose of this volume is to provide a lens through which public policy decisions involving entrepreneurship can be guided and analyzed. In particular, this volume provides insights from leading research concerning the links between entrepreneurship, innovation, and economic growth that shed light on implications for public policy. The book makes clear both how and why small firms and entrepreneurship have emerged as crucial to economic growth, employment, and competitiveness as well as the mandate for public policy in the entrepreneurial society.
