Today's applications are marvels of distributed systems development. Each function or service that makes up an application may be executing on a different system, based upon a different system architecture, that is housed in a different geographical location, and written in a different computer language. Components of today's applications might be hosted on a powerful system carried in the owner's pocket and communicating with application components or services that are replicated in ...

A Thorough Introduction to Distributed Systems
Distributed systems allow you to have a node in both cities, allowing traffic to hit the node that is closest to it. For a distributed system to work, though, you need the software running on those machines to be specifically designed for running on multiple computers at the same time and handling the problems that come along with it.
